CEC Renewable Integration Workshop
Energy Storage Panel

Todd Strauss
June 11, 2012

Key Perspectives on Energy Storage

- **Overall goal is to provide safe, reliable service to customers at a reasonable cost.**
- **Create a competitive and technology neutral environment that allows all resources to compete on equal footing.**

  Procurement targets and carve-outs lead to sub-optimal resource outcomes and potentially higher customer costs.
- **Energy Storage is one of many potential sources of flexible capacity to aid in renewable integration.**
- **Additional demonstration projects for emerging energy storage technologies will increase commercial experience and improve competitiveness.**

Flexibility Supply Curve

Increased operating flexibility may be provided by existing or new resources, both supply side and demand side
