Public Comment regarding the proposed Quail Brush Generation Project

I would like to make the following written comment. I understand that my comments will be docketed and may be posted on the Energy Commission's website and be available to the public.

It is undeniable that the purposed power plant will provide no aid to the environment, at best it has the potential to minimally benefit the people. The problem here is that the people do not wish to receive the benefits the power plant has to offer. Last weeks city council decision should make that obvious. The destination of the power plant is remarkably absurd and would do a great deal of disservice to the environment. At its purposed destination it would create a zone of danger with foreseeable risks not to be assumed by the public or by nature. It is therefore a great risk on behalf of SDG&E, cogentix, Goldman Sachs and the CEC to endure such a proposition. By no means is this in the best interest of the people. It is on the other hand exclusively beneficial for SDG&E and cogentix solely for the purpose to produce more energy ultimately leading to greater income tax revenue. The people wish not for additional power, but rather for a healthy environment, which this purposed power plant will fail to provide.
