RE: CALCTP Lighting Control Acceptance Test Technician Certification Provider Application

Dear Mr. Commins:

I am a California Certified Electrician with twenty-five (25) years experience as an I.B.E.W. wireman. The 2013 Title 24 energy code requires comprehensive acceptance test inspections that should be performed by acceptance testers who have the skills, knowledge, and experience to competently perform them.

Without competent acceptance tests, the code cannot be reliably enforced and the integrity of our energy efficiency goals may not be realized. The certification provided by CALCTP is rigorous and provides proper training for a broad spectrum of lighting control systems. The hands-on training complements the installation experience of a certified electrician.

Based on my own personal experience of performing electrical installations for 25 years and being a Certified Acceptance Technician, I strongly endorse approval of CALCTP's application.

Sincerely,
O'BRYANT ELECTRIC, INC.
