RE: HEARING INVITATION.

Dear Sirs. Mr. John L. Geesman and Ms. Jackalyne Pfannenstiel.

Tank you for your prompt response regarding my Electronic Filing for your HEARING INVITATION.

I am sending you one original and eleven more copies required.

Unfortunately the post office is closed at this time and I must mail it tomorrow.

Thank you again

Saverio Scalzi

Re: Docket No. 06-0ll-1

Sacramento, CA 95814-5512

Dear Sirs. Mr. John L. Geesman and Ms. Jackalyne Pfannenstiel.

For some time I am following the Wind Industry and I believe that California is the only state that takes it very seriously and invite the public to be part of these hearing that may help to solve some of the problems related to this industry specially, to protect some of the birds.

I do not believe that, with these existing Wind Turbines you can protect the AVIAN POPULATION. Until the turbines are spinning around, birds will be killed. I do not believe that these Turbine manufacturers have any interest to change the Turbine design or to stop any further manufacturing of these turbines while they are making billions in revenue.

The DOE encourage and is pumping millions to GE to enlarge the size of these turbines, and under the name of (CLEAN ENERGY), peoples, birds, landscape and everything else, become secondary or nothing.

The reason of my participation to your hearing is to inform you that I have the solution to solve this problem. I have a new Wind Turbine (Patent Applied for) that:

1) Does not interfere with the Avian Population. (It may help some of the birds to nest around the turbine structure).
2) Does not interfere with Terrestrial Telecommunications.
3) Does not destroy the California Landscape.
4) In the right place, each turbine will produce much more electricity.

If the information released by the University of California is correct, from one place alone you can produce most of the California energy needs and save the rest of the Landscape to be destroyed from new Wind Farms.

If you are interested to solve and eliminate future problems, I have more detailed information and drawings for you. (Few minutes of investigation can be productive).

Sincerely.

Saverio Scalzi
