

TRUCKEE DONNER PUBLIC UTILITY DISTRICT

2014 Adopted Energy Storage Targets & Policies

An energy storage target of 0 storage was adopted by Truckee Donner PUD in 2014 to be achieved by December 31, 2016.

The District looked at our geographic location, load shape, type of customers and existing generation portfolio to do our review of energy storage systems.

Key Factors Impacting Energy Storage Procurement

Energy storage systems are currently not a cost-effective viable source for the District at this time with consideration of:

- *High monthly load factor*
- *Winter peaking*
- *Weekend and holiday peaking*
- *Cost of investment in carbon-free generation*

District staff re-evaluates this issue not less than every three years as required by AB 2514.
