

Dear Council Members:

Thank you for considering the feelings of all of us who have great concerns over SONGS.

Personally being a school teacher and working with children everyday, I feel strongly against having this nuclear plant so close to home (Laguna Beach - within the 50 miles radius that will need to be evacuated and risks to loose everything if there was a radiation release at SONGS).

Because of what happened in Japan we have an opportunity to make sure this does not happen to us. SONGS cannot handle an earthquake of over 7.0 and we are on a fault that is capable of a 7.5 to 8.0 quake which would make the 5 to 10 times more powerful. It is not a matter how IF but a matter of WHEN.

Did you know ... SONGS has ten times more safety violations than the industry average making it the second most dangerous nuclear power plant out of all 104 in the U.S.A?

And... Did you know ... SONGS only provides 7.5% of California's energy which could be offset by basic conservation measures while truly clean, sustainable and safe alternatives are expanded upon?

Please help us to let go of this outmoded system of energy and get on with new ones. Together we can make this a better and safer place for all the children.

I thank all of you for taking the time to read this.

Most Sincerely,

Anna Krajec - 949-412-8948.
