## Purpose

Energy Commission staff has produced a draft report, *Achieving Cost-Effective Energy Efficiency for California 2011-2020*, which documents the progress of California utilities toward increasing energy efficiency as mandated by Assembly Bill 2021 (Levine, Chapter 734, Statutes of 2006). The workshop will focus on the estimate of publicly owned utility (POU) efficiency potential and targets. POU efficiency modeling methods, data inputs, potential estimates, and efficiency targets for 2011–2020 are the subject of the draft staff report and this workshop. Staff will discuss their analyses, findings, and recommendations. This workshop will provide an opportunity for POUs and interested stakeholders to comment on the staff report and contribute additional ideas and recommendations.

## Background

AB 2021 mandated that every three years, beginning in 2007, the POUs should identify all potentially achievable cost-effective electricity energy savings, establish revised targets, and file these with the Energy Commission. In addition to these mandates, the Energy Commission should provide, in consultation with the CPUC as the regulator of investor-owned utility energy efficiency programs, a statewide estimate of utility efficiency potential and targets for a 10-year period. The energy agencies and the utilities met this mandate for the first time in December 2007, when they developed statewide targets and utility-specific targets. The next update of utility and statewide efficiency potential and targets was scheduled for 2010. Delays in completing revised potential studies and target experienced by the state's largest utilities precluded the Energy Commission's comprehensive estimate of statewide energy efficiency potential and targets for 2011–2020. The CPUC expects to adopt new IOU efficiency targets for 2012–2020 by mid-2012. The Energy Commission expects revised estimates of all non-reporting POUs' efficiency potential and targets by the end of 2011.
