Jun 24, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Adina Levin
1015 Fremont St

Jun 24, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

There are so many reasons for supporting rooftop solar that I can only list a few: consistent increases in electricity costs, which are becoming truly burdensome for many of us, and which will be accelerated by the imminent cuts in existing sources, such as the Colorado river hydro and the closing of our one So Cal nuclear plant; the horrendous costs of building new plants; the need to reduce climate change, which is already costing Californians plenty; and the fact that a less centralized electrical grid reduces threat of blackouts, brownouts, and terrorism. Given these many benefits of rooftop solar, it's essential that these and other societal benefits should be quantified for consideration by policymakers. The only reason to not have such a study would be to hand the decision over to the banks and corporations, rather than have the choice be made on the basis of the facts by ALL interested parties.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Categories: Ready to Docket

Jun 24, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Andrea Celestica

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Jim Gray

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Evalina Salas

Categories: Ready to Docket

Jun 24, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Linda Belanger

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

James Merrin

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Roberta Martin

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Alexander Ellis

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

Categories: Ready to Docket

Jun 24, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Verona Murray
PO Box 5038

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Kelly Martinez

It should be the law that all new construction, whether commercial or residential, will have solar panels on the roof. This is California where the sun always shines and the only reason the utility companies are against using solar panels is because they don't make revenue from them!

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Ellen Purvis

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Andrés Leal

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

THIS WEEK WE RECENTLY INSTALLED SOLAR PANELS... IT WILL TAKE 10 YEARS TO RECOUP OUR INVESTMENT, BUT LIKE I TELL MY FRIENDS... IT'S NOT ONLY ABOUT THE MONEY!!! IT'S ABOUT NOT HAVING TO RELY ON "DIRTY" ENERGY SOURCES AND IF WE ALL TAKE PREVENTATIVE STEPS, WE CAN ENSURE THAT ADDITIONAL POWER PLANTS WON'T BE NEEDED! THINK OF IT AKIN TO "SETI-AT HOME"

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Charles Binckley

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

Rooftop solar makes sense to me because it generates electricity where it is used, uses existing space rather than disrupting new lands, and provides shade for roofs. Parking lot solar shade structures are good too!

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

This is such a no-brainer. I'm a mom and want everything possible done to slow down GHG emissions in order that my kids have the best chance for a healthy future with a clean and balanced environment.

Rooftop solar is such an obvious win-win situation. It generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Mary And Herman Waetjen

Jun 24, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

I believe rooftop solar could generate huge benefits for Californians such as myself. According to people who follow this sort of thing, policies like net metering are resulting in schools saving money, cleaning the air, and tens of thousands of Californians getting work.

One would think that rooftop solar would play a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar and to truly come from science (still a good thing to most of us thinking people) about the benefits (or lack thereof) of more comprehensive rooftop solar. Let's get the facts. Where would be the harm?

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

Thank you for your consideration.

Sincerely,

Patricia Campbell
