California Energy Commission

DOCKETED

13-IEP-1

TN 71369

JUN 24 2013

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Nicholas Cafagno

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Mary Ann Finger

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

B Sullivan

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

I have been phoned and visited by 4 organizations claiming they represent S. Cal Edison and will analyze my setting and tell me costs and benefits. I have found their information sketchy and they have failed to leave me written statements of what they have told me. If CEC did a comprehensive analysis I would learn enough to move ahead to contract for solar energy.

Thank you for your consideration.

Sincerely,

Laura Rasmussen

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Mardo Rivera
741 S Garfield Ave

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

We'd be using solar if we could, but there are too many trees in the way. Still, we have great faith in solar power.

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Dear Chair California Energy Commission Weisenmiller,

I VIGOROUSLY support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program!!!!

Rooftop solar generates HUGE benefits for Californians such as myself!! Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change. This is a genuine NO-BRAINER!!!!

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar. OBVIOUSLY!!!!

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration!

Sincerely,

Katherine Waid

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners. I put a solar system on my roof to support my pool heater and reduced my PG&E consumption 55%! Of COURSE they don't want us to utilize clean efficient solar power, it might reduce their monopoly on our future. The time is right for a benefit analysis; perhaps factoring in the pollution and long-term ill effects of gas and coal power could prove that it's time to reduce our use of those antiquated methods of obtaining energy.

Thank you for your consideration.

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Tami Phelps

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Diana Morgan-Hickey

Categories: Ready to Docket

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Marjorie Trolinder
4000 Suisun Valley Rd
Fairfield, CA 94534-4017

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

We installed our first set of "solar panels" in 1978. (Ametek's.) After they finally wore out, we installed a set of photovoltaic panels in 2008 and an additional set in 2012. To question that this type of energy production is anything but great for California is to ignore or skew the facts.

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Marleen Gillespie

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

We have read much about the environmental and public health problems with fossil fuels. As a result, we strongly support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

We feel strongly that industry related companies and lobbyists have been trying very hard to dissuade the populace from adopting rooftop solar for their personal use. We adopted rooftop solar in 2006 even though our electric bill was not high because we wanted to be part of the solution rather than part of the polluting problem.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policy makers. Without a comprehensive analysis like the one proposed to the CEC, a fair debate about the best way to increase the use of rooftop solar is well nigh impossible.

We respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners. All Californians deserve such a comprehensive and thorough study.

We appreciate having this opportunity for public input..

Sincerely,

Joan & Wallace MacDonald

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Maryann LaNew
12 Corte Loarre

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. We have ten panels at home, and we are much more aware of using electricity when required during daylight hours. We thought we could detect a slow down in the installation procedures when PG&E had their part to play, so a review of the whole process would be very desirable.

At least, thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work. also, rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Valerie & Andrew Mathews

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Alejandro Bedolla

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Thank you for your consideration. I have had solar panels since the time California's electricity rates went through the roof in the early 2000's. It was the best thing I did. When the electricity rates go up I do not have to worry because the panels take care of the aspect also.

It is the way of the future for individuals and the planet.

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Christopher Cornish

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

E.H. Estes

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I installed a SOLAR SYSTEM 6 years ago and do not have a BILL to pay to PGE each month I OVER PRODUCE ELECT. each month .

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself.

Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

Thank you for your consideration.

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I fully support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a comprehensive and unbiased societal cost-benefit evaluation of California's Net Energy Metering Program, to include health costs due to asthma and mercury from coal-fired plants.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving large amounts of money better used for instruction, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

The US need to stop depending on "filthy fuels" and embrace the future... and solar energy is a part of that future. If the utilities would spend as much time and money on researching and developing alternative fuels as they do on trying to battle them our country would already be self-sufficient and we'd be on the way to reversing climate change.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Kevin Wacknov

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

With California cities 8 of the ten worst air quality locations in the country, it is hard for me to imagine why rooftop solar isn't on every home and every SCHOOL in our state. As a solar customer (we have a 5.8 kw system) we know the financial benefits of having solar for our family. In 8 1/2 years our system will have paid for itself---and we will continue to NOT pay an electric bill. I can not understand what the fuss is about!

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Carl Page

Categories: Ready to Docket

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Gail Sabbadini

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

Rooftop solar has never gotten the support it deserves from the utility companies. Everyone's a winner from solar, except perhaps for PG&E's profits, and their management has been so poor in the past few years that they don't deserve better. I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Please grant the petition and perform the societal cost-benefit study requested by the petitioners.

Thank you for your consideration.

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

We support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as us. We installed rooftop solar on our house in 2011, and have already saved over \$2,000 in electric bills and prevented 18,500 pounds of CO2 emissions. The money we have saved on our electric bill is money we spend locally on restaurants, shopping etc instead of that money being sucked out of the local economy by some giant out of state energy corporation. And that is for just one house! Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

We respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

Subject: Docket No. 13-IEP-1 -- Comments on Petition for Societal Cost-Benefit Evaluation of California's Net Energy Metering Program

Categories: Ready to Docket

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Suzanne Crawford
PO Box 256
Alpine, CA 91903-0256

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

Subject: Docket No. 13-IEP-1 -- Comments on Petition for Societal Cost-Benefit Evaluation of California's Net Energy Metering Program

Categories: Ready to Docket

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Peter Van Krieken

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

RL Maiden

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work. I installed solar panels 8 years ago and could not be more pleased. Not only saving me money and reducing the nation's dependence on fossil fuels, but the personal satisfaction of helping to protect our planet and solve the global warming phenomenon has been most satisfying.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Daniel Brower

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Albert Desrosiers

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Wilhelm Kapp

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

Categories: Ready to Docket

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

B Dysart-Tollefson

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Cindy Nicolaysen
3134 Strand Rd

Dear Chair California Energy Commission Weisenmiller,

San Diego gets the same amount of solar power from the sun as Arizona! We get over 400 hours per year. Let's tap into it now. I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Robert Broska

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Christopher Mossing

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I strongly support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and others, requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

I have solar panels on my roof for both electricity and hot water. I also have an electric car with a charger in my garage, powered by the solar panels.

I am saving money and saving the planet. It's a way I can do my bit to fight climate change.

Net metering provides savings for schools, our air is cleaner, and jobs have been created. Solar reduces the need for dirty natural gas peaker plants.

These and other benefits should be quantified because without a comprehensive analysis like the one proposed to the CEC, there's no way to have a fair debate about the best way to increase the use of rooftop solar.

Please grant the petition and perform the societal cost-benefit study requested by the petitioners.

Thank you.

Sincerely,

Pat Marriott

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Bevan Jones

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

It is time to stop rewarding corporations for destroying the earth. They are currently creating hazardous waste that will pollute our world indefinitely, while corporate heads rob us blind. This is unacceptable. Our tax dollars have gone to facilitate this madness for far too long!. America was founded by people who put extreme limitations on corporations for a reason. We are experiencing the effects of removing those public protections.

It is time to give the POWER back to the PEOPLE NOW. Dissolve the power giants and promote renewable power, or we will all suffer the consequences.

Sincerely,

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas power plants and is an important way for individuals to help fight climate change.

These and other societal benefits must be considered by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Steve Dillow

Categories: Ready to Docket

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Lissa Wick

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Danita Sorenson
PO Box 1725

Dear Chair California Energy Commission Weisenmiller,

Let's promote solar panels on roof tops of public buildings.

As they say, knowledge is power. To this end the California Energy Commission (CEC) should go through with a societal cost-benefit evaluation of California's Net Energy Metering Program.

Please grant the petition that was submitted recently by the Sierra Club, American Lung Association in California and other parties would requesting that and perform the societal cost-benefit study requested by the petitioners.

Thank you for your consideration.

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

I am a California homeowner (above water!), energy and environmentally conscious, and I vote.

Today the average homeowner can contribute to our state and nation's energy independence by installing a rooftop solar array, and the entrenched power industries shall not suppress our independence!

Plus, rooftop solar has huge benefits, saving money, the air, and employing tens of thousands of Californians.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

Categories: Ready to Docket

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Jesse Aranda
4945 York Blvd Apt 1
Los Angeles, CA 90042-1663

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I am writing to support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

As an architect in California, I urge all my clients to incorporate rooftop solar into their new construction and remodel projects. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

Thank you for your consideration.

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

We have installed enough solar energy on our rooftop to be essentially net zero electricity users despite our suburban location. Solar has the additional advantage of generating energy at the same time utilities struggle to produce enough power on hot summer afternoons. I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Gerry Langer

Dear Chair California Energy Commission Weisenmiller,

Dear Chair Weisenmiller / California Energy Commission,

I SUPPORT !..... the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates HUGE benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a CRITICAL role in REDUCING the need for dirty natural gas peaker plants and is an IMPORTANT way for individuals to help fight climate change.

These and other societal benefits SHOULD be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully STRONGLY REQUEST that you GRANT !..... the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Karen Roegner

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Sean Rashti

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I am writing to support the petition by the Sierra Club, submitted on 6/5/13. I want to let you know that we have a 6.7kWh solar system on our property in San Diego county and could not be happier. It has been providing us with clean, reliable energy for over 2 years already. In 6 years, the system will be paid for and we will have roughly \$500 of electricity per month for free (at today's prices). There is NO reason to oppose solar PV installations in this sun-drenched area of the country. Monthly cost (when financed) can be the same as payments to the utility company for a fixed period of time, and the only party that may lose in the process are the utilities. However, everyone else: the citizens, the air, the landscapes, WIN.

Please SUPPORT solar electric generation--it's the obvious way to go forward!!

Sincerely,

Jan Charvat

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Helen Mcallister, Phd
16635 Round Hill Ct
Hidden Valley Lake, CA 95467-8810

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Stephen Bohac

Categories: Ready to Docket

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Michael Stanfield

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Karen Rasmussen

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Maria Borges

Categories: Ready to Docket

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Keith Reynolds
8514 Ballina St

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Robert Samuel Jr
2412 Dale Ave

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Linda Whitley

Re:

Evaluation of California's Net Metering Program
Docket #13-IEP-1

Committee Members,

I am writing today to ask you to keep the Net Metering Program for those who have and will in the future taken the time and spent large sums of money to put Roof Top Solar Projects on their homes. We have been encouraged to do so by our state and by our utility companies to help with the Clean Energy Policy and its Federal deadline for our state and to lessen our own carbon footprint. Now the utility company wishes to punish those of us who have gone the way of putting solar units up? Please don't let this happen! If California wants more residents and businesses to invest in Solar energy, adding more to the cost is absolutely not the way to do it!

Fortunately, we have our Solar Energy in and running currently. But I can tell you that the cost was a major factor for us as it is for most other residents who want to include solar projects on their homes. Why would you want to impeded that process? The utility companies need to know that maybe they need to hold their costs down within their companies and not load all financial costs onto the ratepayers unnecessarily.

(I've seen what their profits are and they are obscene!)
Especially those who have already invested tens of thousands of
dollars in Solar for the good of our state and that of our planet!

Thank you for your time to consider my
comments-

Rebecca L. Jordan

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Samuel Rametta

Categories: Ready to Docket

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Elaine Barrett
1020 Robinson Ave Apt 8

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Don Meehan

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

William Manners

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

It is a mathematical certainty that one day we will be out of fossil fuels, given our current usage. On the other hand, in less than ten minutes the earth receives enough solar energy to equal the fossil fuel energy used in a YEAR. So promoting solar energy is a no-brainer.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Robert Anelli

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Robin Leiter

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners. I very much want this study by non-partial experts, and I believe all Californians and policy makers need this study. Thank you for your consideration.

Sincerely,

Fred Dorer

Categories: Ready to Docket

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Howard Moore

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Anne Stowell

Thank you for your consideration.

My wife and I added 12 PV panels to our rooftop 6 years ago when we remodeled our house. During the past two billing cycles we have owed PG&E less than \$5.00 for the entire year to pay for the electricity we used but did not generate. Rooftop solar is the way to go!

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

Thank you for the opportunity to comment. I am a longtime Californian, and I strongly support the petition submitted on June 5, 2013 by the Sierra Club, the American Lung Association in California, and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Despite what large utilities like my own PG&E spend millions trying to convince their ratepayers, rooftop solar generates huge benefits for residents. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty coal and natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

Thank you for your consideration.

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Kathy Fuller
2356 1/2 Vancouver Ave
San Diego, CA 92104-5353

On a personal note, my parents who live across the street from me in my childhood home, just installed solar panels on their roof. They have had solar panels for their heating for years. My dad has proudly come over to share with me that their meter is actually running "backward" and crediting their account. He also proudly informed me that when he and my mom "depart this planet" the company has agreed to remove the panels and re-install them on my roof. Local churches have installed solar panels and everyone is benefitting from this environmental move. Please support the idea of solar panels as they are truly a win-win for everyone including our planet!

Subject: Docket No. 13-IEP-1 -- Comments on Petition for Societal Cost-Benefit Evaluation of California's Net Energy Metering Program

Categories: Ready to Docket

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Noah Tenney
318 Athol Ave
Oakland, CA 94606-1416

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

Coal, gas and oil are finite resources. To survive mankind MUST find alternatives. An established infrastructure of solar power on rooftops will help the nation in more ways than one. Jobs from manufacturing to installation will help the economy while reducing pollution and decreasing our reliance on non-renewable resources that we can ill afford to send up smokestacks.

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Categories: Ready to Docket

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I have asthma and feel the effects of dirty air. I have children and want them to have a livable future. We need to address climate change by all means possible.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Gail Sredanovic

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Cindy Long

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I have read that the utilities claim the roof-top solar (herein referred to as RTS) excesses cause poor neighbors subsidize the rich guy with the roof-top solar. I want to go on record to say that is not correct. Most roof-top solar (RTS) is designed to meet the needs of an individual house, albeit there are times like midday summer when it may generate an excess. The establishment of RTS is based on the consumers historical use of electricity and will not exceed the household use by much. The presence of the device in neighborhood reduced the transmission losses and thus creates a benefit to the power company when they charge a neighbor for distribution that is costing the power company less. The presence of the device in the neighborhood decreases the likelihood of a power outage, as an outage will shut down the producing unit as well. Furthermore, I am not rich, I am the poor neighbor who invested in solar to save money. I am spending \$100/mo on a \$10,000 loan now in hopes that the device will be paid off but hopefully will last long enough to pay for itself well into my retirement, when I will not have as much income. I have also purchased other energy star devices to minimize my electricity use.

I can see that the energy model of various produces might have to change. Well, this is a world where changes are needed and the energy company as a public utility is obliged to serve the public and include the healthy environment. They will still have many opportunities for distribution of energy and for the production on energy in low light hours.

Furthermore I agree with Sierra Club suggestions that

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself.

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Mary Kay Tullock

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

John Macunovich
3675 Monon St Apt 201
Los Angeles, CA 90027-3037

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

During the big blackout a few years ago, the only people who had power were those who had rooftop solar panels. If they had had affordable storage, they would not have lost power when the sun set.

It is obvious that the big power monopoly does not want rooftop solar because it may mean that the customers that are currently held hostage to their rates can become independent. Any installations they have espoused were large arrays that needed billions of dollars in transmission infrastructure, rather than using the existing infrastructure. Why? Because then they keep control with centralized power and the people that have no choice other than to use that power.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants, dangerous nuclear plants, and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Categories: Ready to Docket

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Charles Agler

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

We have rooftop solar and are extremely pleased with it. We actually make money and generate electricity. We are able to save money and help the environment.. The idea put forward by oil companies and utilities that solar rooftop is part of the problem is ridiculous. It makes it more difficult for them to control profits but for the environment and for democracy it is a win win. I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Categories: Ready to Docket

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Lisa Henry

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Dimitar Minkovsky

Jun 22, 2013

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

As a signer of the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties, I again request that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Let me point out what many writers and home-owners still seem surprised to hear: "PHOTOVOLTAIC" means that DAYLIGHT, not only sunbeams, produce electrical energy. So rooftop p.v. generates great benefits for Californians such as myself. Not only homeowners benefit!

Today I passed several public parking lots with open-air shade roofs bearing p.v."solar" panels. Thanks to policies like net metering, schools now save money, air is cleaner, and new California jobs in energy have opened up.

Our C.E.C. needs to quantify the various societal benefits for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, Californians can't have a fair debate about best ways to increase the use of p.v. solar.to generate power.

Please re-read and then grant the petition and perform the societal cost-benefit study requested by the petitioners. Thank you for your attention!.

Sincerely,

Dale Heckman

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work. We have solar panels on our house roof and it was a wise move for us and we have been very satisfied.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Patricia Bleha

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

David Hoobler

AND THEN SHARE WITH THE PEOPLE THAT LET THEIR ROOFS BE USED A FAIR must receive compensation, not the pittance that is offered.

I have also heard that there are many companies who will install their solar collectors on your roof AT NO EXPENSE TO YOU. For twenty year contracts, I think.....but it sounded to me like it was completely to reward the big guys and not remunerate the people who let them put the collectors there. There is some remuneration from them or the utilities, however, it is worth a whole lot more than the people are receiving.

Just another example of the rich getting richer and more powerful.
The 1% will be benefitting, as usual, and the 99% of us carry the burden have no power to change things.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Nicole Lewis

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Stephen Bartlett-Re

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

My personal feeling is that Big Power wants to suppress this advanced approach to increasing our clean energy as a pure business move. Their goal is to eliminate any possible competition. This is NOT the way to plan for a better future for all Californians. Don't lend your authority to their attempts to enforce their monopoly on electrical energy.

Thank you for your consideration.

Sincerely,

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Jennifer Bailey

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

Thank you for your consideration.

Sincerely,

David L. Ely

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.

Chair California Energy Commission Robert Weisenmiller

Dear Chair California Energy Commission Weisenmiller,

I support the petition submitted on June 5, 2013 by the Sierra Club, American Lung Association in California and other parties requesting that the California Energy Commission (CEC) perform a societal cost-benefit evaluation of California's Net Energy Metering Program.

Any time any corporation attempts to close down or slow down a project that create jobs, helps a state recover from a recession and prepare for the future energy crisis one needs to seriously question their statements and motives. Corporations have only one thing in mind.

Their legal obligation to their share holders. It does not matter if their product causes more deaths (pharmaceutical and chemical companies), increase global warming, polluted air and water (energy companies) or world wide financial crisis (financial industry). They will do anything and say anything to get their way. Twisting facts, hiding information and making unrealistic promises are a few of their tactics.

Rooftop solar generates huge benefits for Californians.. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work. This nation continues to be in a recession. Millions of workers are unemployed and underemployed. California has a program that works.

Let's not throw it under the bus because large energy corporations are having a tantrum.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

John Parent

Rooftop solar generates huge benefits for Californians such as myself. Thanks to policies like net metering, schools are saving money, the air is cleaner, and tens of thousands of Californians have headed back to work.

Rooftop solar plays a critical role in reducing the need for dirty natural gas peaker plants and is an important way for individuals to help fight climate change.

These and other societal benefits should be quantified for consideration by policymakers. In the absence of a comprehensive analysis like the one proposed to the CEC, it will be challenging to have a fair debate about the best way to increase the use of rooftop solar.

I respectfully request that you grant the petition and perform the societal cost-benefit study requested by the petitioners.
Thank you for your consideration.

Sincerely,

Jonathan Castro
