

Explanation

- Location of seismic profile
- Time slice horizon
- Faults, solid where well located, dashed where inferred or approximately located, dotted where buried by more than 20 milliseconds of undeformed strata
- ↗ Syncline
- ↕ Anticline
- ↖ Monocline

Note: Depth values on seismic profile assume a velocity of 1600 m/sec.

Structure associated with the northern part of the Point Buchon fault zone shown in (a) 3D seismic-reflection profile 11820 and (b) in amplitude time slice at 150 ms (TWTT)
