Publication 21585

About this publication:

A major objective of this publication is to allow the reader to compare the costs of various pressurized orchard irrigation system designs. The irrigation system costs presented in this publication were developed in 1997. The costs will become outdated, but unless the cost of a particular irrigation system component changes at a substantially greater rate than other components, the relative cost comparison between the pressurized irrigation system designs should remain similar. The irrigation system costs will be periodically updated and can be obtained by contacting Larry Schwankl at the University of California, Davis.

Table of Contents:

Costs of Pressurized Irrigation Systems for Tree Crops

Design Assumptions Used in the Study

Initial Costs versus Annualized Costs

Frost Protection Considerations

Solid-Set Sprinkler Systems

Drip Systems

Microsprinkler Systems

Minisprinkler Systems

Summary of Irrigation System Costs

Calculating Costs If Your Orchard Is Different from the Analyzed Designs

Summary
