

THE MCLEOD HARVEST METHOD

TR-114457

SUMMARY

The McLeod Harvest Method completed its fourth year of Research and Development in 1998. The following report highlights the advancements made during that year towards developing revolutionary harvesting equipment. In summary, within a 35 week period, a complete harvesting system was assembled, tested and demonstrated to the farm media and community .The project was completed on time and on budget. Additional work is required, however, planning is already underway for next phase of development, the Pre-Production Prototypes.
