SEP 28 2012

Comment from private citizen

The number of recent comments in support of this great boondoggle require a response. The comments show that waving a 160 million dollar bonanza to a bunch of people eager to get some of the loot will bring comments out of the woodwork.

The most recent comments are interesting in that they seem to be on one subject, how much the commenter appreciates the program. I don't know why these people are commenting except that they wish to slurp in the 160 million dollar gravy train.

As I have previously stated this program is based on the erroneous concept that bad energy sources to generate commercial electricity can be transformed into good energy sources by throwing taxpayer/ratepayer money at them. If not stopped, this program will go on for several years and nothing valuable will come out of it. There will be a bunch of long reports generated showing that bad energy sources are bad energy sources except the spin will make it sound like more money is needed to study the subject.

This program should be stopped now. How can the state can afford it when there are so many worthwhile organizations ,e.g. , the school and park systems being short changed?
