RE: Support for California Lighting Technology Center (CLTC)

Dear Commissioner McAllister:

I am writing to you in strong support of the California Lighting Technology Center (CLTC) at the University of California, Davis. CLTC is a public-private partnership that has helped shaped the energy efficient lighting industry for more than 10 years. This partnership grew out of a close collaboration between the lighting industry, California's utilities and the California Energy Commission and supports research, demonstration, education and training of ground breaking energy efficient lighting technologies.

SunCentral has collaborated with CLTC to independently verify the performance and energy savings of its innovative and game-changing SunBeamer and SunCentral System products. Through our collaboration, SunCentral has gained valuable data and insight into the future of energy efficient lighting. This allowed the company to continue to innovate and bring state-of-the-art products to market that deliver full spectrum, natural sunlight throughout multi-storey buildings, helping to create the next generation of healthier, more productive, and more energy efficient indoor environments.

CLTC is very effective in addressing and resolving lighting-related issues that impede progress toward net-zero energy goals. A significant part of CLTC's success is due to the integrated and harmonized activities that bring together education, research and codes and standards activities. We strongly encourage this integrated approach. Continued investment in CLTC presents the opportunity to address long-term energy efficiency issues as buildings become more complex, intelligent, and active. SunCentral is pleased to provide its support to CLTC as we work together to ensure California remains a leader in energy efficient lighting in the built environment.

Sincerely,

Guthrie Cox
CEO
