

19 February 2015

To: The California Energy Commission

Dear Commissioner McAllister:

We are writing in string support of the CLTC at the UC Davis. The CLTC has created a partnership that has grown out of the collaboration of the lighting industry, California's investor utilities and the California Energy Commission has helped accelerate the adoption of energy saving strategies for lighting.

We have collaborated on projects with the CLTC as well has used them as a resource for advancing our own technologies. We are proud to have worked with them on the Honda Zero Net Energy demonstration home in providing fixtures that have demonstrated energy saving strategies as well as the effects of lighting on the environment and human circadian rhythms. We have also providing fixtures for demonstration projects on the UC Davis campus that demonstrated energy saving methods.

Investing in CLTC provides opportunities to effectively integrate and address long-term energy efficiency issues that cannot be obtained through individual project solicitations. The CLTC can more effectively accelerate the adoption of energy efficient strategies through the public-private funding that has been demonstrated over the last 10 years.

Sincerely,

Randy Borden
President/CEO
