Subject: RETI Phase 1A Draft Comments

Tim,

Okay I read though the RETI Phase 1A draft report. It is a well-written draft, and I have just two comments, to wit:

1. Draft Section 5.4.6. Cost and Performance Characteristics. In the first paragraph of this subsection, lines 9-10, the draft states that: "The levelized cost of energy as well as energy generation profile from trough should be roughly similar to that of other technologies".

That statement is incorrect, so you might want to consider striking that sentence from the draft.

2. Solar Tower Write-up. I forwarded the attached draft description of the solar tower a few weeks ago to Ryan Pletka. Why wasn't the description included in the draft report?

Thanks for your time.

Sincerely,

Doug F.
