Executive Summary

AECOM Technical Services, Inc. (AECOM) was retained by NextEra Blythe Solar Energy Center, LLC (NextEra Blythe Solar), a wholly owned subsidiary of NextEra Energy Resources, LLC, to perform a Phase I Environmental Site Assessment (ESA) of the site and associated linear facilities for the proposed Blythe Solar Power Project (BSPP). The BSPP site is located on approximately 4,070 acres of vacant desert land in Riverside County approximately 8 miles west of Blythe, California (subject property). The BSPP includes an approximately 3 mile long access road (Dracker Drive) connecting the project to Black Rock Road, an approximately one mile distribution line, and an approximately 11 mile long generation tie (gen-tie) line where the project will interconnect to the grid at the Southern California Edison (SCE) Colorado River Substation, which is currently under construction. The subject property, including the linear facilities, is on federal land administered by the Bureau of Land Management (BLM). This Phase I ESA was performed in general conformance with the scope and limitations of ASTM Practice Designation E 1527-05 for ESAs. Exceptions to, or deletions from, this practice are described in this report.

Ms. Kirsten Bradford with AECOM's Camarillo, California office conducted a site reconnaissance of readily accessible areas of the subject property on June 11, 2013. The majority of the subject property consists of undeveloped desert land with dry washes traversing the site in a general west to east direction. Approximately 10 percent of the main portion of the subject property has been previously disturbed. This disturbance is the result of previous site development activities that were conducted by the previous project developer approximately two year ago. More specifically, the development of a 1,000 megawatt (MW) solar thermal project on this site was approved by the California Energy Commission (CEC) and the BLM in late 2010. Some construction was commenced for the initial phase of the project, including work on the access road, and desert tortoise fencing was installed in 2010 as part of the development of the BSPP by the prior owner. NextEra Blythe Solar purchased rights to the project in 2012 and is currently permitting the approximately 4,070 acre portion of the original area for a 485 MW photovoltaic solar project. NextEra Blythe Solar removed the desert tortoise fencing in late 2012, and the only current on-site activities are related to surveys and other site visits.

Aside from these disturbances (described above) and four groundwater test wells that are located on the main project site, no significant manmade features (structures, buildings, etc.) were identified during AECOM's site visit. AECOM observed that existing power lines are located on the northeastern side of the subject property and a Southern California Gas Company gas line that appears to run along the north-south dirt access road located on the property. Small quantities of miscellaneous household trash and debris were at various locations throughout the subject property.

The subject property is bordered to the north by undeveloped desert land and to the west by undeveloped desert land, beyond which is the McCoy Mountains. Several properties to the east and northeast are utilized for agricultural production. Properties to the south include two residences, vacant land and the Blythe Airport, beyond which is I-10. Several other projects are proposed for this area, including the McCoy Solar Energy Project immediately to the north of the BSPP site.

AECOM conducted a Phase I ESA of the proposed solar plant site for the previous BSPP applicant (Palo Verde Solar I, LLC, formerly known as Solar Millennium, LLC) in March 2009. No recognized environmental conditions (REC) or historic RECs were identified by AECOM in connection with the subject property which consisted of approximately 11,000 acres at that time. AECOM observed

miscellaneous trash and debris (e.g., household dumping) at various locations throughout the subject property and surrounding area all of which was considered a de minimis condition (DMC). No hazardous waste was observed on the subject property during AECOM's 2009 site visit. The presence of unexploded ordinance (UXO) related to the World War II era use of the site and surrounding area as a military training area was identified in the 2009 Phase I ESA as a non-ASTM issue of environmental concern.

Based on the results of this assessment, no RECs, historic RECs, or DMCs were identified in connection with the subject property. However, the following non-ASTM environmental concern was identified:

- UXO associated with past military training activities has been identified on the subject property. It has been AECOM's experience, that when encountered, it is not common for World War II-era UXO to impact the subsurface with hazardous materials due in part to their age, and the arid nature of the deserts of Southern California. It is therefore, AECOM's opinion that UXO does not present a REC to the subject property.

1.0 Introduction

1.1 Purpose

The purpose of this Phase I Environmental Site Assessment (ESA) was to evaluate the current and historical conditions of the subject property in accordance with the agreed upon scope of work, in an effort to identify recognized environmental conditions (RECs) in connection with the subject property.

An REC is defined by ASTM as "The presence of or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies." This assessment is based on a review of existing conditions, reported pre-existing conditions, and observed operations at the subject property and adjacent properties.

1.2 Scope of Work

The Phase I ESA included a site visit, historical review, regulatory research, and environmental database analysis of the subject property. In conducting the Phase I ESA, AECOM assessed the subject property for visible signs of possible contamination, researched public records for the subject property, and conducted interviews with representatives of regulatory agencies and current owner.

This ESA was performed in general accordance with ASTM Standard Practice Designation E 1527-05 and AECOM's written communication with the Client dated May 31 and June 3, 2013. Conclusions reached in this report are based upon the assessment performed and are subject limitations set forth in Sections 1.3, 1.4, and 1.5 below.

1.3 Study Limitations

This report describes the results of AECOM's Phase I ESA to identify the presence of contamination-related liabilities materially affecting the subject property. In the conduct of this assessment, AECOM assessed the presence of such problems within the limits of the established scope of work as described in our proposal.

As with any due diligence assessment, there is a certain degree of dependence upon oral information provided by facility or site representatives, which is not readily verifiable through visual observations or supported by any available written documentation. AECOM shall not be held responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed by facility or site representatives at the time this assessment was performed. In addition, the findings in this report are subject to certain conditions and assumptions, which are noted in the report. Any party reviewing the findings of the report must carefully review and consider all such conditions and assumptions.

This report and all field data and notes were gathered and/or prepared by AECOM in accordance with the agreed upon scope of work and generally accepted engineering and scientific practice in effect at the time of AECOM's assessment of the subject property. The statements, conclusions, and opinions contained in this report are only intended to give approximations of the environmental conditions at the subject property.

As specified in the ASTM standard (referred to below as "this practice"), it is incumbent that the client and any other parties who review and rely upon this report understand the following inherent conditions surrounding any Phase I ESA:

- **Uncertainty Not Eliminated** – No ESA can wholly eliminate uncertainty regarding the potential for REC in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for REC in connection with a property, and this practice recognizes reasonable limits of time and costs. (Section 4.5.1 of the ASTM standard)
- **Not Exhaustive** – "All appropriate inquiry" does not mean an exhaustive assessment of a clean property. There is a point at which the cost of information obtained outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an ESA and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of the ASTM Standard)
- **Comparison with Subsequent Inquiry** – It should not be concluded or assumed that an inquiry was not an "all appropriate inquiry" merely because the inquiry did not identify RECs in connection with a property. ESAs must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent ESAs should not be considered valid standards to judge the appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors. (Section 4.5.4 of the ASTM Standard)

This report was prepared pursuant to an agreement between the Client and AECOM and is for the exclusive use of the Client. No other party is entitled to rely on the conclusions, observations, specifications, or data contained herein without first obtaining AECOM's written consent and provided any such party signs an AECOM-generated Reliance Letter. A third party's signing of the AECOM Reliance Letter and AECOM's written consent are conditions precedent to any additional use or reliance on this report.

The passage of time may result in changes in technology, economic conditions, site variations, or regulatory provisions, which would render the report inaccurate. Reliance on this report after the date of issuance as an accurate representation of current site conditions shall be at the user's sole risk.

1.4 Site-Related Limiting Conditions

The following site-specific limitations were encountered during the course of this assessment:

- Due to the size of the subject property (over 4,000 acres) and restrictions related to off-road travel, it was not possible to traverse all areas of the subject property and surrounding features during the site reconnaissance. The site visit methodology consisted of driving selected paved and unpaved access roads along the property perimeter and traversing through the central portion of the subject property.

1.5 Data Gaps/Data Failure

The following data failure/data gaps were encountered during the course of this assessment:

- As specified in the agreed upon scope of work, a title search and environmental lien search were not conducted as part of this ESA. However, based upon historical data collected from other sources, this data gap does not represent a data failure and as a result is not expected to impact the results of this assessment.
- Per ASTM, interviews of past owners, operators, and occupants of the subject property, who are likely to have material information regarding the potential for contamination at the subject property, shall be conducted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. AECOM obtained historical property information from site representatives, sources listed in Section 4.0. Based on the historical information obtained during this Phase I ESA, AECOM does not consider this data gap to be a significant limitation to this report.
- AECOM was not able to review historical aerial photographs or topographic maps associated with the distribution line, access road, or gen-tie line. However, certain portions these features were identified on a collection of historical aerial photographs or topographic maps that AECOM obtained for our 2009 Phase I ESA. In addition, the gen-tie was evaluated in a Phase I ESA performed by Tetra Tech as part of their 2011 Phase I ESA. No historical concerns were identified along the gen-tie route by Tetra Tech. Based on our historical review, the results of our recent site visit, and the fact that that these features are located on vacant/undisturbed desert, AECOM does not consider this data gap to be a significant limitation to this report.

2.0 Site Description

2.1 Site Location and Parcel Description

The Blythe Solar Power Project (BSPP) site (subject property) is located on approximately 4,070 acres of vacant desert land in Riverside County approximately 8 miles west of Blythe, California (subject property). The BSPP includes an approximately 3 mile long access road (Dracker Drive) connecting the project to Black Rock Road, an approximately one mile distribution line, and an approximately 11 mile long generation tie (gen-tie) line where the project will interconnect to the grid at the Southern California Edison (SCE) Colorado River Substation, which is currently under construction. The approximate location of subject property is shown on 'Figure 1 – Site Location Map.

2.2 Site Ownership

The current property owner is the United States government, and is under the administration of the Bureau of Land Management (BLM) Palm Springs, California office.

2.3 Site Visit

Ms. Kirsten Bradford with AECOM's Camarillo, California office visited the subject property on June 11, 2013. During the site visit, Ms. Bradford was accompanied by Mr. Daniel (Dan) Neville, Project Director Development with NextEra Energy Resources, LLC (NextEra). Mr. Neville provided information on the current development and history of the subject property. Mr. Neville has been associated with the subject property since 2012.

The site visit methodology consisted of driving on the existing access roads (e.g., Blackrock Road, Dracker Drive) that are associated with the disturbed areas (areas of the site that were previously graded) and provide access to the interior portions of the subject property. AECOM viewed the west end of the gen tie line by driving to the Colorado River Substation (project feature) from an access road to the west. AECOM viewed the distribution line by driving to it from the east. Additionally, AECOM drove selected portions of the surrounding area. The weather at the time of the site visit consisted of clear skies and breezy conditions with temperatures in the low 80 degrees Fahrenheit. Representative site photographs taken during the site visit are included as Appendix A. The approximate locations that the photographs were taken is illustrated on Figures 3 through 5. The following sections summarize the results of the site visit.

2.3.1 Site and Facility Description

No buildings or structures are currently located on the subject property. AECOM observed that approximately 10 percent of the subject property has been previously disturbed and/or graded in advance of previous site development plans. Those plans were reportedly cancelled due the subsequent bankruptcy of a previous site developer.

With the exception of the power lines on the northeastern side, the subject property consists of vacant desert land. During the site visit, no visual evidence of dry wells, clarifiers, or septic systems was observed on the subject property. Four water and/or monitoring wells were observed on the subject property. One empty, dry concrete water cistern was observed on the subject property, located to the north of the on-site water and/or monitoring wells and in association with three former rock and mortar

structures that only had portions of the walls and concrete foundations remaining. Visual evidence of discolored soil, water, or unusual vegetative conditions or odors was not observed. Miscellaneous trash and debris was observed during subject property, the extent of which was significantly less than what was observed in 2009. The main features of the subject property area illustrated on Figure 2. Figures 3 through 5 provide additional details on the site features.

2.3.2 Surrounding Properties

The subject property predominately is surrounded by undeveloped desert land. A private parcel is located adjacent to the west of the subject property. Private properties and the proposed McCoy Solar Energy Project are located adjacent to the north of the subject property. Agricultural land, including field crops and a lemon orchard are located adjacent to the north, east, and south of the distribution line. Blythe Airport, two gasoline stations, and a weigh station are located to the north, east, and south of Blackrock Road (project feature). Interstate 10 crosses the gen-tie line. First Solar operates a solar field that is located adjacent to the east of the southern portion of the gen-tie line. No sensitive receptors (i.e. day care centers, schools, hospitals, water bodies) are adjacent to the subject property. Based on AECOM site reconnaissance of the surrounding area, no off-site sources of concern were identified.

2.4 Utilities

No utilities currently service the subject property. However, overhead power lines are located on the northeastern side of the subject property and an abandoned Southern California Gas Company gas line appears to run along the north-south dirt access road located on the property. There was no evidence of historical septic systems or potable/process water supply wells on-site.

2.5 Petroleum and Hazardous Materials

AECOM did not observe evidence of the use or storage of petroleum hydrocarbons or hazardous materials on the subject property.

2.6 Hazardous and Solid Wastes

No evidence of hazardous waste generation was observed at the subject property. However, as noted in Section 2.3.1, small quantities of refuse were observed at various locations on the subject property. The majority of the refuse consisted of miscellaneous paper and plastic waste. No solid waste disposal areas were observed on the subject property.

2.7 Underground Storage Tanks

No evidence of underground storage tanks (USTs) (e.g., vent pipes, fill ports) was observed on the subject property during the site reconnaissance. In addition, no records of potential USTs were discovered during AECOM's review of the site-specific environmental database report or online research.

2.8 Aboveground Storage Tanks

No evidence of above ground storage tanks (ASTs) was observed at the subject property during the site reconnaissance. This is consistent with AECOM's 2009 Phase I ESA site observations.

2.9 PCB-Containing Equipment

For informational purposes, PCB-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. No transformer or PCB-containing equipment, including pole-mounted transformers, was observed at the subject property during the site reconnaissance.

2.10 Water

No potable water wells were observed at the subject property, or reported by Mr. Neville to be located at the subject property. The subject property is not provided with a municipal water supply connection. Four water and/or monitoring wells were observed on the subject property. See Section 3.3 for further discussion. The location of the wells is depicted on Figure 2.

2.10.1 Wastewater

Wastewater is not generated at the subject property. No evidence of past wastewater generation was identified during the course of this assessment.

2.10.2 Stormwater

Stormwater from the subject property appears to infiltrate into the subject property soils, and traverses the subject property via the numerous desert stormwater, or dry washes located throughout the property. The subject property is not provided with a municipal stormwater sewer system connection.

2.11 Herbicide and Pesticide Use

Due to the lack of documented onsite agricultural use, no evidence of past fertilizers, herbicides, or pesticides was identified during the course of this assessment.

2.12 Surface Staining/Stressed Vegetation/Debris

Surface staining, stressed vegetation, or areas of significant debris were not observed during AECOM's site visit.

3.0 Environmental Setting

3.1 Topography

The elevation of the subject property ranges from approximately 400 to 600 feet and in general, slopes gently away from the McCoy Mountains from the west to the southeast. No holding ponds or other permanent water bodies were observed on the subject property. No staining or stressed vegetation was observed associated with the drainage features located along the southern and eastern sides of the subject property.

3.2 Soil/Geology

The subject property is located on the Palo Verde Mesa in the Colorado Desert Province. This province consists of desert terrain with mountain ranges surrounded by extensive alluvial fans and plains. The flood plain of the Colorado River forms the east margin of the area. Mountainous areas are primarily bedrock exposures with the adjacent valleys underlain by alluvial fan and plain deposits originating from the nearby uplands. The oldest rocks exposed in the region surrounding the Blythe Site are Proterozoic gneiss and granite. These rocks are overlain by Paleozoic to early Jurassic metasediments that were originally deposited as sediments on the stable North American craton. These metasediments are exposed in the Big Maria and Little Maria mountains, north of the Blythe Site. Volcanism and intrusion followed, with subsequent deposition of the Cretaceous McCoy Mountain Formation metasediments.

Regional deformation and metamorphism occurred during the late Cretaceous in the Big Maria and Little Maria Mountains, and to a lesser degree in the McCoy Mountains. This was then followed by faulting and local volcanism and sedimentation during the early Tertiary (Oligocene to Miocene). Starting in the Miocene and continuing into the Holocene, alluvial fans formed on the flanks of the surrounding mountains. Alluvial plains occur in the central portion of the valleys along with more recent outwash associated with local drainage. These younger alluvial sediments are generally subdivided based on morphology.

Also occurring in the region of the Blythe Site are several areas of Colorado River alluvium (QTmw). These areas correspond to the mound and knob on the Blythe Site that were discussed earlier and are adjacent to McCoy Wash. Present-day geomorphology has the Blythe Site located on what is referred to as the Palo Verde Mesa. The area has a generally low relief until near the surrounding mountains (McCoy, Big Maria, and Little Maria mountains). Approximately 3 miles beyond the eastern site boundary, a sharp break in slope forms the boundary between the Palo Verde Mesa and the Palo Verde Valley, which is 80 to 130 feet below the mesa. In the region, the Palo Verde Valley is roughly equivalent to the recent historic floodplain of the Colorado River (CH2MHill, 2008).

3.3 Groundwater/Hydrology

Four groundwater monitoring wells were advanced at the subject property for hydrogeology evaluation purposes. Two of the wells were used to conduct pump tests of the aquifer and the two remaining wells were used as observation wells to observe the resulting water level draw down. The approximate location of those wells is illustrated on Figure 3. Groundwater flow direction in the area so the subject property is expected flow in to the northeast and depth to groundwater is expected to be greater 250 feet below ground surface.

4.0 Site and Area History

The following site history was prepared based on the review of aerial photographs dated 1951, 1959, 1996, and 2002, historical topographic maps dated 1947, 1951, 1952, 1970, and 1983, a review of previously prepared environmental reports prepared for the subject property, an interview with Mr. Neville who has been associated with the subject property since 2012, and information obtained from BLM during AECOM's May 2009 Phase I ESA.

4.1 Aerial Photograph Review

The 1951 and 1959 aerial photographs (scale 1" = 1,000') show the subject property and adjacent sites as undeveloped, desert land. I-10 and the Blythe Airport are visible to the south of the subject property. Additionally, several dirt tracks and roads are visible throughout the subject property and adjacent properties. These tracks were likely utilized by recreational visitors to the area.

The 1996 and 2002 aerial photographs (scale 1" = 1,000') depict the subject property and the northern and western adjacent sites as undeveloped, desert land. I-10 and the Blythe Airport are visible to the south of the subject property. Residences and associated agricultural activities are depicted to the northeast, and south of the subject property. Several dirt roads are visible throughout the subject property and the adjacent properties. These dirt roads appear to provide access to the adjacent residences/farms and to the subject property. Activities on the subject property are likely off-highway vehicle and hiking recreational activities.

4.2 Historical Topographic Map Review

Historical topographic maps were available for the main BSPP site and were available for portions of the remaining site features. The maps reviewed as part of this assessment included: Blythe Quadrangle (1947), McCoy Wash Quadrangle (1951), McCoy Springs Quadrangle (1952), McCoy Wash Quadrangle (1970, photo revised from 1951), and McCoy Peak Quadrangle (1983).

The historical topographic maps do not indicate historical development, wells, pits, or mines on the subject property. Dry washes are indicated throughout the property in the 1983 McCoy Peak Quadrangle Map. The Blythe Airport is first visible to the south of the site in the 1951 McCoy Wash Quadrangle Map.

4.2.1 Sanborn Map Review

EDR's Sanborn Map collection does not include coverage for the subject property or surrounding area. It has been AECOM's experience that historical Sanborn Maps were typically not made for undeveloped areas; therefore Sanborn Maps are not expected to be available for the subject property.

4.3 Previously Prepared Environmental Reports

AECOM conducted a Phase I ESA of the proposed solar plant site for the previous BSPP applicant (Palo Verde Solar I, LLC, formerly known as Solar Millennium, LLC) in March 2009. No REC or historic RECs were identified by AECOM in connection with the subject property which consisted of approximately 11,000 acres at that time. AECOM observed miscellaneous trash and debris (e.g.,

household dumping) at various locations throughout the subject property and surrounding area all of which was considered a de minimis condition (DMC).

No hazardous waste was observed on the subject property during AECOM's 2009 site visit. The presence of unexploded ordinance (UXO) related to the World War II era use of the site and surrounding area as a military training area was identified in the 2009 Phase I ESA as a non-ASTM issue of environmental concern.

In January 2011, Tetra Tech EC, Inc. conducted a Phase I ESA for NextEra Energy Resources, LLC of the McCoy Solar Energy Project (MSEP). MSEP is located immediately north of BSPP and this 2011 Phase I ESA included the gen-tie line corridor for MSEP to the Colorado River Substation, much of which is shared with BSPP. The findings of the 2011 Phase I ESA for MSEP were similar to those identified in 2009 Phase I ESA for BSPP, i.e., no identified RECs, de minimis conditions related to trash and debris, and a non-ASTM concern related to the potential presence of UXO in the area.

4.4 Summary of Historical Review

The subject property, the private parcel surrounded by the BLM parcels, and adjacent properties appear not to have been developed historically, aside from the residential and agricultural use of the northeastern and southern properties (circa 1996 to present) and the airport to the south (circa 1951 to present). No industrial or commercial sites (aside from the airport) were identified in the vicinity of the subject property. The Southern California deserts were historically used as military training areas; however, specific information pertaining to the use at the site was not available.

UXO associated with past military training activities has been identified on the subject property which is not unexpected given the areas use as a major training area during the World War II-era. It has been AECOM's experience, that when encountered, it is rare for World War II-era UXO to impact the subsurface with hazardous materials due in part to their age, and the arid nature of the deserts of Southern California. It is therefore, AECOM's opinion that UXO does not present a REC to the subject property.

5.0 Database and Records Review

Section 6 of the ASTM Standard states that certain tasks, which will help to determine the possibility of RECs associated with the subject property, are generally conducted by the ESA report user. This includes reviewing title records for environmental liens, or activity and land use limitations, and considering awareness of any specialized knowledge (e.g., information about previous ownership or environmental litigation), experience related to RECs at the subject property, or significant reduction in the purchase price of the subject property. Per the agreed scope-of-work, information related to these items should be provided by the ESA report user to AECOM.

5.1 User Provided Information

5.1.1 Interview with Current Subject Property Owner

The property owner is the United States government, and is under the administration of the BLM Palm Springs office. In 2009 the Palm Springs office was presented with a one page "User Questionnaire." The user was required to provide the information requested (if available) to the AECOM environmental professional. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete. The completed questionnaire was returned to AECOM. The questionnaire did not identify that the BLM representative was aware of any potentially negative environmental conditions on the subject property. AECOM does not anticipate that information provided by BLM in 2009 has changed significantly over the course of the last several years.

5.1.2 Interview with Past Owners, Operators and Occupants

Per ASTM, interviews with past owners, operators, and occupants of the subject property who are likely to have material information regarding the potential for contamination at the subject property shall be conducted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. AECOM obtained historical information from aerial photographs and historical topographic maps which showed that the subject property consistently has been undeveloped, desert land. Historical on-site use has been limited to power transmission right of ways, unimproved roads, and public/recreation access. Based on AECOM's historical research and because interviews with past owners of the subject property were likely to provide duplicative information, past owners were not contacted. This data gap does not represent a significant limitation to this assessment.

5.1.3 Interview with Site Manager

In 2009 AECOM interviewed the BLM (as stated above), which is the government agency currently managing the subject property. No information with respect to negative environmental conditions on the subject property was identified.

5.1.4 Interview with Government Agencies

Interviews with select government agencies, including the Regional Water Quality Control Board and the Department of Toxic Substances Control, were conducted as appropriate, and salient information is incorporated as appropriate throughout this report. A current review of a site-specific environmental

database as well as a review of various online regulatory databases (i.e., GeoTracker), did not identify an environmental concern associated with the subject property.

5.2 Title Records/Environmental Liens

Per the agreed upon scope of work, a lien search was not performed as a part of this assessment. However, other than the information discussed as appropriate in this report, the client did not provide information concerning any environmental concerns associated with title records, nor was the user aware of environmental liens on the subject property.

5.3 Federal and State Database Information

Standard environmental record sources are defined in Section 8.2.1 of the ASTM standard. These records consist of selected Federal and state environmental databases. ASTM also specifies the appropriate search distances from the subject property for which these records should be reviewed. AECOM retained the services of EDR of Milford, Connecticut to provide specified state and Federal regulatory list information for potential sites of environmental concern located at or in the vicinity of the subject property. EDR maintains a computerized Geographic Information System (GIS) listing of various state and Federal databases in accordance with the ASTM standard. The database search was based upon ASTM-specified standard record sources. Additionally, databases searched by EDR satisfy records review requirements of all the appropriate inquiry rules. EDR includes these databases, when available, as a part of its report. Descriptions of each database are provided in the EDR database report, which is provided as Appendix B.

The EDR report includes various reports detailing database information for each of the sites identified/geocoded within the specified radius. Additional sites with recognized environmental risks were identified, but AECOM was not able to map them to specific locations due to insufficient/contradicting address information. These sites were included in EDR's report as "orphan" sites.

The EDR database did not indicate any sites of concern to be located on the subject property or within a one-mile radius of the subject property. Additionally, the orphan sites identified in the database report were determined to be outside a one-mile radius from the subject property.

5.4 Agency File Review

Per Section 8.2.2 of the ASTM standard, local, and/or additional state or tribal sources of environmental records shall be reviewed to enhance and supplement the ASTM-required Federal and state records reviewed and discussed in Section 7.1 of this report. As the subject property was not located on or within one mile of tribal lands, tribal records were not researched as a part of this assessment.

No information was available from the Regional Water Quality Control Board or the Department of Toxic Substances Control to indicate any historical hazardous waste or contamination issues at the subject property. These findings are consistent with the findings from AECOM's 2009 Phase I ESA.

5.5 Specialized Knowledge/Value Reduction Issues

The client had no specialized knowledge pertaining to the subject property or related on-site operations, nor was the client aware of property valuation reduction issues for the subject property.

5.6 Reason for Performing the Assessment

AECOM was authorized by the client to perform this Phase I ESA in order to address a specific data request posed by the California Energy Commission (CEC) to the project applicant. Specifically, the CEC requested that the May 2009 Phase I ESA report be updated.

5.7 Other

Other than the documentation discussed in this report, the client was unaware of any additional information relative to the subject property.

6.0 Findings and Opinions

AECOM performed a Phase I ESA of the subject property in conformance with the scope and limitations of ASTM Practice E 1527-05, which meets the requirements of Title 40, Code of Federal Regulations Part 312 and is intended to constitute *all appropriate inquiry* for purposes of the landowner liability protections. Any exceptions to, or deletions from, this practice are described in Section 1.3 through 1.5 of this report.

6.1 Recognized Environmental Conditions

Based on the above-described activities, no RECs were identified in connection with the subject property.

6.2 Historical Recognized Environmental Conditions

Based on the above-described activities, no historic RECs were identified in connection with the subject property.

6.3 De Minimis Conditions

Based on the above-described activities, DMC were identified in connection with the subject property.

6.4 Other

UXO associated with past military training activities has been identified on the subject property. It has been AECOM's experience, that when encountered, it is not common for World War II-era UXO to impact the subsurface with hazardous materials due in part to their age, and the arid nature of the deserts of Southern California. It is therefore, AECOM's opinion that UXO does not present a REC to the subject property.

7.0 Conclusions

We have performed a Phase I ESA of the BSPP and its associated features located in unincorporated Riverside County, California, in conformance with the scope and limitations of ASTM Practice E 1527-05. Any exception to, or deletions from, this practice are described in Sections 1.3 through 1.5 of this report. This assessment has revealed no evidence of RECs, HRECs, or de minimis conditions in connection with the subject property. However, UXO associated with past military training activities has been identified on the subject property.

8.0 Quality Control/Quality Assurance

8.1 Site Visit, Research, and Report Preparation

The site visit, research, and report preparation were conducted by Ms. Kirsten Bradford from AECOM's Camarillo, California, office.

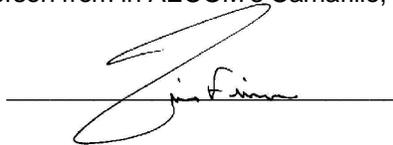

Signature:

8.2 Quality Control Review

Historic, regulatory research, report preparation, and a first level review of this report was conducted by Mr. Jim Fickerson from in AECOM's Camarillo, California, office, office.

Signature:

A second level review of this report was conducted by Ms. Sara Head from in AECOM's Camarillo, California, office.

Signature:

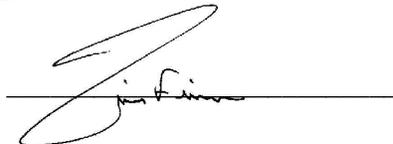

8.3 Environmental Professional Statement

Mr. Jim Fickerson was the Environmental Professional (EP) for this project. Mr. Fickerson's EP statement is below and his resume is provided in Appendix C.

I declare that, to the best of my professional knowledge and belief, I meet the definition of an EP as defined in §312.10 of 40 Code of Federal Regulations (CFR) and that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Signature:

Date: June 13, 2013

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 02/01/2013	Source: EPA
Date Data Arrived at EDR: 03/01/2013	Telephone: N/A
Date Made Active in Reports: 03/13/2013	Last EDR Contact: 05/09/2013
Number of Days to Update: 12	Next Scheduled EDR Contact: 07/22/2013
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/15/2011
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/04/2013	Source: EPA
Date Data Arrived at EDR: 03/01/2013	Telephone: 703-412-9810
Date Made Active in Reports: 03/13/2013	Last EDR Contact: 05/29/2013
Number of Days to Update: 12	Next Scheduled EDR Contact: 09/09/2013
	Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 02/05/2013	Source: EPA
Date Data Arrived at EDR: 03/01/2013	Telephone: 703-412-9810

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 02/12/2013

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/12/2013
Date Data Arrived at EDR: 02/15/2013
Date Made Active in Reports: 02/27/2013

Data Release Frequency: Varies

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 03/14/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/29/2013	Telephone: 703-603-0695
Date Made Active in Reports: 05/10/2013	Last EDR Contact: 03/11/2013
Number of Days to Update: 42	Next Scheduled EDR Contact: 06/24/2013
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/14/2013	Source: Environmental Protection Agency

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 03/11/2013	Source: Department of Toxic Substances Control

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

Date of Government Version: 12/31/2011	Source: California Environmental Protection Agency

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

EDR PROPRIETARY RECORDS

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services
Telephone: 916-657-4041

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Appendix C

Qualifications of Environmental Professional

Jim K. Fickerson

Program Manager

Years Experience: 19

Technical Specialties

- Project Management
- Environmental Due Diligence
- Environmental Liability Cost Analysis
- Environmental Permitting
- Integrated Site Closure

Professional History

- AECOM
- Texaco Refining and Marketing, Inc.
- City of Saratoga

Education

- BS (Environmental Studies) San Jose State University

Summary

Mr. Fickerson has nearly 20 years of diverse experience directing large-scale, multidisciplinary environmental management programs for industrial clients globally. He is particularly experienced managing multi-site environmental due diligence evaluations of aerospace, manufacturing facilities, and other complex industrial facilities under considerable logistical and scheduling constraints. Over the course of his career, Mr. Fickerson has managed technically challenging soil, groundwater, and soil vapor assessments, coordinated numerous remediation projects and/or obtained regulatory site closure of industrial project located throughout the United States, Canada, and Latin America. In addition, to environmental due diligence and remediation, Mr. Fickerson has specialized experience managing the compliance monitoring associated with the construction of large-scale renewable energy projects.

For nearly 10 years, Mr. Fickerson has been a proactive leader in AECOM's global Environmental Due Diligence Practice (EDD) where he has played a critical role in the development of AECOM internal online EDD training program. Mr. Fickerson serves as AECOM's environmental due diligence leader for the Western Region and leads AECOM's global EDD Technical Practice Network (TPN).

Representative Project Experience

Confidential Client, Construction Monitoring & Compliance, Wind Farm, Kern County, California.
Project manager for a cultural resource monitoring project in support of the construction of a wind farm in a remote and geographically diverse portion of the Kern County. The project involved the construction of over 200 miles of roads and 100 wind turbine pads on an approximately 13,000 acre site. In addition to construction monitoring, the project involved significant data recovery activities, agency and Native American communication, laboratory analyses, the curation of nearly 9,000 artifacts that were discovered over the course of the eight-month construction compliance effort and the compilation of two volumes reports to document the construction monitoring effort.

Hydrogen Energy California, Environmental Due Diligence, Kern County, California. Mr. Fickerson was the project manager for a Phase II ESA of this 1,000 acre proposed alternative energy plant site. This Phase II ESA was conducted to evaluate over 14 recognized environmental conditions including underground storage tanks, a former fertilizer plant, unknown underground structures, and over 40 years of heavy agricultural use. The results of the Phase II ESA were documented in comprehensive technical report and submitted to the Department of Toxic Substance Control.

Latham and Watkins & Academy of Motion Pictures and Sciences, Environmental Due Diligence, Hollywood, California. Project manager for the environmental due diligence of one city block located in Hollywood, California. Activities conducted included reconnaissance of the site and surrounding neighborhood; a review of various historical resources; an analysis of a regulatory database report, review of local and state regulatory agency files, and researching the physical characteristics of the site. RECs that were identified included current and former underground storage tanks, dry cleaners, and the historical use of chlorinated solvents. These environmental concerns were further evaluated by the implementation of a comprehensive subsurface investigation program including the collection and laboratory analysis of soil, soil vapor, and indoor air samples. Over 10 technical environmental reports were prepared summarizing the results of the numerous investigations. The project team is currently providing the client with technical guidance regarding vapor intrusion mitigation/ remediation, environmental liability cost analysis/budgeting for future site redevelopment, and assistance with CEQA permitting.

Public Storage, A-American Self-Storage, Environmental Due Diligence, Western United States. Mr. Fickerson was the project manager for the environmental due diligence of 75 commercial properties located throughout California, Hawaii, Illinois, and Nevada. For this project, Mr. Fickerson developed an environmental management database to manage the workflow and report production. This innovative database approach has since been replicated on numerous large-scale portfolios by AECOM thereby allowing colleagues worldwide to seamlessly collaborate on multi-site due diligence portfolios.

Public Storage, Environmental Due Diligence, Multi-Site Portfolio, North and South Carolina. Managed the environmental site screening of 47 self-storage properties located throughout North and South Carolina. The project involved sites visits; historical research; regulatory agency and environmental database review; interviews with facility personal; a review of previously prepared environmental reports; preparation of site-specific summary reports; and a preparation of a comprehensive cost analysis to quantify the environmental liabilities associated with the transaction. This challenging project was completed within a tight two week timeframe.

Public Storage, Environmental Due Diligence, Multi-Site Portfolio, Minnesota and Wisconsin. Managed the acquisition of 27 self storage sites in Minnesota and Wisconsin. The project involved the performing Phase I ESAs at all 27 sites; asbestos surveys at four sites, subsurface investigations of seven sites; preparation of a comprehensive environmental liability cost estimate; and agency negotiations with Minnesota Pollution Control Agency to obtain letters of "No Association Determination" for four of the 27 sites.

NextEra Energy Resources, LLC, Environmental Due Diligence, Fremont Valley, California. Task manager and senior environmental assessor for the environmental due diligence of a proposed parabolic solar plant located in the Fremont Valley, near California City, California. This site consisted of nearly 3,000 acres of desert, 17.6 mile transmission line, and the former Fremont Valley Ranch. These assessments have involved site and area reconnaissance; review of various historical resources; analysis of regulatory database reports, reviews of local and state regulatory agency files, researching the physical characteristics of the sites, and preparation of half a dozen reports. More recently, Mr. Fickerson coordinated the restoration of this site including the removal of two underground storage tanks (USTs), abatement of asbestos and lead-based paint, demolition of nine former residential and ranching buildings, and the cleanup and removal of various onsite debris and hazardous materials.

TA Realty, Limited Phase II Environmental Site Assessment, Carson, California. Technical lead and task manager for the design of a comprehensive soil and soil vapor program to evaluate over 50 years of longer term industrial use including circuit board manufacturing, foam manufacturing, petroleum exploration and production, metal plating, vehicle repair, and extensive use and storage of a wide variety of hazardous materials of this 10 acre industrial property located in Carson, California.

Latham and Watkins and Del Mar Industries, Site Characterization and Remediation Support, Gardena, California. Project manager for the characterization and sealing of PCB-impacted concrete at die casting facility located in Gardena, California. The characterization involved the collection of four concrete cores and 66 wipe samples. The result of the testing indicating that approximately 17,600 square-feet of PCB-impacted concrete was present at the site. The surface of the impacted-concrete was cleaned and sealed with two layers of epoxy coating in general accordance with U.S. EPA cleanup and sealing guidance. At the conclusion of the project, a hazardous materials management plan was prepared in anticipation of the client selling and/or leasing the business to another entity.

First Solar, Environmental Due Diligence, 276 Acres, Mesa, Arizona. Project manager and technical lead, responsible for evaluating the environmental condition of the northeastern portion of the General Motors Proving Grounds. This project involved conducting a comprehensive Phase I ESA and the design and implementation of an environmental soil boring program to establish a baseline of environmental conditions at this site.

The Amargosa Conservancy, Environmental Due Diligence, Death Valley Junction, California. Project manager for the environmental due diligence of the historic mining town of Death Valley Junction, California. The assessments involved site and area reconnaissance of 246 acres; a review of over 100 years of historical documents; an analysis of a regulatory database report, review of local and state regulatory agency files; researching the physical characteristics of the site; collection and laboratory analysis of soil and groundwater samples; and preparation of two technical reports.

Chevron Environmental Management Corporation, Site Cleanup, Santa Barbara, California. Project manager of the environmental assessment and remediation of a former gasoline service station located in Santa Barbara, California. The project involved site characterization; pilot testing of MPE, vapor extraction, and bio-sparging remediation technologies; the completion of a sensitive receptors survey; and the rebuilding of a sense of trust with the regulatory agency. In addition, a conceptual remedial action plan was developed and preparations were made to install a full scale remediation system.

Unocal Corporation, Site Cleanup, Yuma, Arizona. Project manager of the subsurface characterization and remediation of a former bulk fuel terminal in Yuma, Arizona. NAPL was present both onsite and offsite at thickness ranging between 0.5 and 3 feet. Long term remediation costs using conventional remediation technologies were forecast in excess \$2.5M. Due the extent of non aqueous phase liquids (both on and offsite) regulatory site closure was not considered feasible using conventional remedial technologies. In addition, the operation of the existing MPE system was costing over \$250,000 a year with marginal hydrocarbon recovery rates. Mr. Fickerson managed the design, execution, and analysis of a steam injection pilot test at this site. Results of a one month pilot test indicated that steam injection increased hydrocarbon recovery by 500 percent. A financial analysis indicated that over \$1M would be saved by the site wide implementation of a steam injection based remediation system with regulatory site closure estimated at two years from implementation.

Chevron Corporation, Site Cleanup, Phoenix, Arizona. Project manager of the environmental assessment and remediation of a former bulk fuel terminal in Phoenix, Arizona. Working closely with ADEQ, Mr. Fickerson coordinated a comprehensive subsurface soil and groundwater assessment including the advancement of 38 borings, six groundwater wells from depth ranging between 15 and 110 feet below ground surface. Mr. Fickerson lead a remediation team that excavated 3,500 tons of petroleum impacted soil from nine onsite areas of concern, installed eight multi-zone vapor extraction/bio-venting wells, and the construction and startup of a soil vapor extraction system.

Chevron Corporation, Cost Evaluation, Multiple Sites, West Coast, United States. Performed a technical cost evaluation of 2005 buy-out negotiations between Unocal and Conoco Phillips to determine reasons why the negotiations were not successful including the methods used to generate the allocation values, and document the lessons learned from the project. Results of the negotiations analysis concluded that the negotiations were not successful due in part to the use of differing unit costs, remediation strategy, closure timing, and scope of work. Lessons learned included the importance of having a well-defined cost allocation methodology, agreement on key assumptions, unit costs, and end point prior to beginning negotiations.

Air Liquide, Environmental Due Diligence, San Bernardino, California. Project manager and senior environmental assessor of the environmental due diligence associated with the acquisition of a former gasoline fuel blending facility located on 14 acres in San Bernardino, California. Mr. Fickerson designed and implemented a comprehensive soil boring and geophysical survey program to fully evaluate over 30 RECs that were identified. At the conclusion of the project, a budgetary cost estimate that quantified the environmental liabilities associated with the transaction was prepared.

P.S. Business Parks, Environmental Due Diligence, Three Former Oil Field Sites, Signal Hill, California. Project manager of the environmental due diligence associated with three industrial properties located in Signal Hill, California. RECs identified at the sites included former oil sumps, waste disposal areas, and petroleum production facilities. The environmental concerns associated with each site were further evaluated by the implementation of a comprehensive subsurface soil boring and geophysical program. Identified environmental liabilities were further analyzed and a budgetary cost estimate was prepared to assist the client in their purchase of the sites. The entire project was completed under budget and within the tight time constraints of a real estate transaction.

Unocal Corporation, Regulatory Closure, Phoenix, Arizona. Project manager of the former gasoline service station in Phoenix, Arizona. The site was located on the corner of a busy street near downtown Phoenix that had become blighted by years of inactivity. The sale of the site and its redevelopment was being hindered by the presence of 1-2-DCA in groundwater at concentrations that exceeded regulatory cleanup objectives. Complicating issues was a nearby dry cleaner whose release was impacting the groundwater beneath the service station. Working with risk assessment team, convinced ADEQ that the remaining 1-2-DCA did not present a risk to human health or the environment, and that regulatory site closure should be issued. The site was subsequently redeveloped for beneficial use.

Unocal Corporation, Regulatory Closure, Safford, Arizona. Project manager of the former bulk plant in Stafford, Arizona. Despite extensive onsite assessment and remediation by others, regulatory site closure of this site was hindered by a commingled plume from a nearby gasoline service station. Working with a team of geologists and hydrologists, convinced ADEQ that the presence of benzene along the sites eastern border was a result of the nearby gasoline service station, rather than from an onsite release. Regulatory site closure was granted allowing the site to be sold and redeveloped for beneficial use.

Nature Conservancy, Environmental Due Diligence, Tecopa, California. Managed the environmental due diligence of a former worker camp and precious metals mine in Tecopa, California. RECs identified at the site were further evaluated by the implementation of a comprehensive trenching program. Total metals including cyanide, mercury, lead, and copper were identified in soil at concentrations that exceed hazardous waste criteria. Potential remedial scenarios were evaluated, a preliminary risk assessment was performed, and discussions with the client's legal counsel were conducted. The project team decided that the elevated metals concentrations could be managed in place, thus avoiding costly (in excess of \$1M) remediation, and allowing a conservation easement to be placed on this ecologically sensitive property.

PS Business Parks, Environmental Due Diligence, San Ana, California. Performed a Phase I ESA and managed a subsurface assessment of a business park containing 437,000 square-feet of commercial office/warehouse space on 25 acres in Santa Ana, California. An extensive historical review indicated that the site was formerly occupied by a sugar beet processing plant. The identified RECs were further evaluated by the implementation of a comprehensive soil boring program. Mr. Fickerson prepared a budget cost estimate and assisted the client in obtaining environmental insurance allowing the client to proceed with the purchase of property.

Northrop/Vought Aircraft Corporation, Comprehensive Soil and Groundwater Assessment, Hawthorne, California. Deputy Project Manager for a comprehensive fence-line to fence-line soil assessment of an 80-acre aerospace manufacturing facility. The assessment involved the drilling and sampling of over 200 soil borings to assess the extent of soil impacted by halogenated solvents, petroleum hydrocarbons, and metals.

Confidential Client, Regulatory Site Closure, Marina Del Rey, California. Project manager responsible for a subsurface soil and groundwater assessment of a dry cleaning facility located in Marina Del Rey, California. Despite the presence of chlorinated solvents in groundwater at concentrations that exceed California's maximum contaminant levels, Mr. Fickerson was able to successfully demonstrate that the release was not a risk to human health or the environment and regulatory site closure was granted by the Los Angeles Regional Water Quality Control Board.

Shamrock Logistics GP, LLC, Liability Analysis, Multiple Sites, Southern California. Project manager and primary assessor responsible for the technical environmental liability cost evaluation of groundwater impacts associated with the acquisition of 14 tank farms, heating stations, and over 33 miles of connecting pipelines located throughout Southern California.

Sempra Generation, Environmental Due Diligence, Maui, Hawaii. Managed and performed a Phase I ESA of a proposed wind farm located on the eastern portion of Ulupalakua Ranch, Maui, Hawaii. This large site consisted of over 5,200 acres of rugged ranch land. The assessment involved a site and area reconnaissance; a review of various historical resources; an analysis of a regulatory database report, review of local and state regulatory agency files, researching the physical characteristics of the site, and preparation of a comprehensive report.

The Valspar Corporation, Environmental Due Diligence, Commerce, California. Performed a Phase I ESA of an approximately 170,000 square-foot chemical manufacturing plant located in Commerce, California at the request of the Regional Water Quality Control Board. The assessment involved a site and area reconnaissance; a review of various historical resources; an analysis of a regulatory database report, review of local and state regulatory agency files, researching the physical characteristics of the site, and preparation of a report. Over 10 recognized environmental conditions were identified which lead to the development of a comprehensive subsurface soil and groundwater assessment program under the regulatory oversight of the RWQCB.
