Other technical areas of the data requests may be discussed as necessary, including Visual Resources.

BACKGROUND

On August 31, 2009, Genesis Solar, LLC, (applicant) submitted an Application for Certification (AFC) to the California Energy Commission to develop the Genesis Solar Energy Project (Project Genesis), a solar electric generating facility with a nominal net electrical output of 250 megawatts. On October 12, 2009, the applicant submitted a Data Adequacy Supplement to the AFC, covering areas earlier determined as incomplete. This Supplement was evaluated by staff, and subsequently, at the Energy Commission's November 4, 2009 Business Meeting, the Energy Commission found the AFC complete, beginning Energy Commission staff's analysis of the proposed project.

PROOF OF SERVICE (REVISED 1/26/10) FILED WITH
ORIGINAL MAILED FROM SACRAMENTO ON 2/11/10**MS**

PROJECT DESCRIPTION

Project Genesis is a concentrated solar electric generating facility that would consist of two, independent solar electric generating facilities with a nominal net electrical output of 125 megawatts (MW) each, for a total net electrical output of 250 MW. The project would utilize solar parabolic trough technology to activate a heat transfer fluid. This heat transfer fluid provides a high-temperature energy source which is used to generate steam. As this steam expands through the turbine generators, electrical power is generated.
