PUBLIC WORKS  
DEPARTMENT

May 21, 2001

Mr. Bill Carnahan  
Executive Director  
Southern California Public Power Authority  
225 S. Lake Avenue  
Pasadena, CA 91101

**SUBJECT: INTENT TO PROVIDE WASTEWATER DISCHARGE SERVICES  
MAGNOLIA POWER PROJECT**

Dear Bill:

The City of Burbank currently owns and operates a wastewater discharge point located at the Burbank Water and Power property at 164 West Magnolia Boulevard in Burbank, California. This discharge point is currently operated under a National Pollutant Discharge Elimination System permit and is the responsibility of the Public Works Department.

The City of Burbank is member of the Southern California Public Power Authority (SCPPA) and intends to provide SCPPA the ability to utilize the wastewater discharge point, in accordance with NPDES requirements, for the Magnolia Power Project (MPP). We understand the MPP may be operated for a term of at least 30 years. The members of SCPPA who will participate in the MPP include: City of Burbank, City of Anaheim, City of Colton, City of Glendale and the City of Pasadena.

The City of Burbank is committed to entering into an agreement with SCPPA to use the wastewater discharge point substantially in accordance with the above.

Sincerely,

Bruce S. Feng  
Public Works Director

**CITY OF BURBANK  
PUBLIC WORKS DEPARTMENT  
MEMORANDUM**

DATE: June 6, 2001

TO: Ron Davis, BWP General Manager

FROM: *[Signature]* Bruce S. Feng, Public Works Director

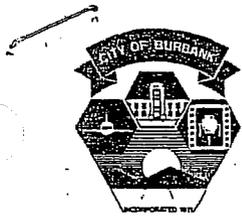

SUBJECT: **INCREASED WASTEWATER DISCHARGE AT THE STEAM  
POWER PLANT**

'01 JUN -8 P3:58  
BWP  
GENERAL MANAGER'S OFFICE

Attached is the signed letter to the Southern California Public Power Authority (SCPPA) that you requested. This letter indicates the City's intention to allow SCPPA to use the wastewater discharge point located at the Burbank Water and Power (BWP) Yard at 164 West Magnolia Boulevard. As you know, any flows that will be generated from the Magnolia Power Project must meet all National Pollution Discharge Elimination System (NPDES) discharge requirements.

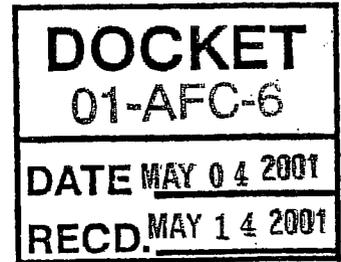

The Public Works Department will be negotiating a new discharge permit with the Regional Water Quality Control Board (RWQCB) after our current litigation is settled. Since the RWQCB has decided to appeal the initial judgement granted by the Los Angeles County Superior Court, it could be a year or more before we reach settlement. During negotiations, it may be desired or necessary to obtain two separate permits - one for the discharge point at the Burbank Water Reclamation Plant and one for the BWP Yard. Should this occur, the Public Works Department would be willing to relinquish the control of the discharge point at 164 West Magnolia Boulevard to Burbank Water and Power.

PUBLIC SERVICE DEPARTMENT

May 4, 2001

Mr. Bill Carnahan  
Executive Director  
Southern California Public Power Authority  
225 S. Lake Avenue, Suite 1410  
Pasadena, CA 91101

**Subject: INTENT TO LEASE SITE AND PROVIDE WATER  
MAGNOLIA POWER PROJECT**

Dear Bill:

The City of Burbank currently owns and operates power generating facilities located at 164 West Magnolia Boulevard in Burbank, California. The property is situated approximately one-eighth of a mile west of the Interstate-5 freeway in Los Angeles County and encompasses approximately 23 acres. Burbank Water and Power operates generating facilities with a total combined capacity of approximately 231 megawatts on the property.

The City of Burbank is a member of the Southern California Public Power Authority (SCPPA) and intends to enter into a lease agreement with SCPPA to utilize a portion of the property for the Magnolia Power Project (MPP). Under a lease, the MPP can be constructed and operated for the life of the Project. The MPP will be located on approximately 3.1 acres in the northeast area of the property. The members of SCPPA who will participate in the MPP include: City of Burbank, City of Anaheim, City of Colton, City of Glendale and the City of Pasadena.

In addition to the lease with SCPPA, the City of Burbank will also supply water for the MPP. The water supply will be a combination of reclaimed water from the nearby City of Burbank Reclamation Plant and domestic water. Although the amount of reclaimed water that will be needed by the MPP has not yet been finalized, the City understands that the maximum MPP water demand could be up to ten million gallons per day. Assuming worst case water consumption and anticipated reclaimed/domestic water proportions, the

City of Burbank has concluded that it has sufficient resources to supply the MPP reclaimed and domestic water for the life of the project.

Sincerely,

Ronald E. Davis  
General Manager, BWP
