

**P PALOMAR ENERGY PROJECT (01-AFC-24)  
CEC STAFF DATA REQUEST NUMBER 97**

**Technical Area: Visual Resources**

**Response Date: April 8, 2002**

**REQUEST:**

Please describe night lighting to be used during project construction.

---

**RESPONSE:**

The Palomar construction generally will be lighted to the minimum level needed to provide safety and security. There also will be an area of the site that will be lighted sufficiently to allow maintenance of construction equipment in the evening hours. Lighting will be placed on temporary poles and will be shielded and directed downward to minimize potential impacts on nearby residential areas.
