Re: Tesla Power Project (01-AFC-21) Petition for Post-Certification Amendments

Dear Ms. Scott:

This petition is being submitted to modify the conditions of the original CEC license and is being submitting in accordance with the provisions of Section 1769 of the CEC Rules of Practice and Procedure.

The petition requires the revision of nine conditions of certification. Proposed changes include:

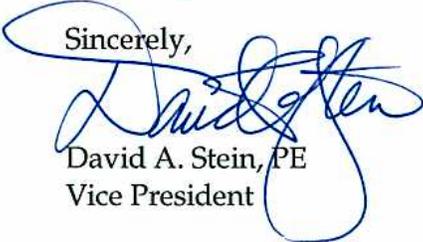

- Increased emission rates of NO_x and CO during start-up,
- Increased emission rates of PM₁₀ from the cooling towers,
- Increased PM₁₀ emission offsets for slightly greater cooling tower emissions,
- Elimination of the seasonal PM₁₀ emission limit,
- Minor clarification to the averaging period for fuel sulfur content compliance,
- Minor corrections to daily emission limits, and
- Minor corrections to a hazardous waste condition

Attachment C includes a list of all nine conditions and the changes requested in this petition.

This petition is consistent with a recent request for amendments to the Final Determination of Compliance (FDOC) submitted to the Bay Area Air Quality Management District (BAAQMD). Attachment A includes a copy of the letter sent to BAAQMD requesting amendments to the FDOC. Attachment B includes a copy of the Tesla Power Plant Air Quality Modeling Supplement also submitted to the BAAQMD. We are also enclosing a complete CD of the air quality modeling information submitted to the BAAQMD. It is anticipated that the BAAQMD will complete its review and issue a revised FDOC within the next 90 days. The CEC will be provided with copies of the amended FDOC as soon as it becomes available.

Please contact Kenneth Stein at (561) 691-2216 or me at (510) 587-7787 if you have any questions regarding these materials.

Sincerely,

David A. Stein, PE
Vice President
