

**CALIFORNIA  
ENERGY COMMISSION**

**California Energy Commission  
April 10, 2024 Business Meeting  
Backup Materials for ev.energy Corp.**

The following backup materials for the above-referenced agenda item are available in this PDF packet as listed below:

1. Proposed Resolution
2. Grant Request Form
3. Scope of Work

**[PROPOSED]**

**RESOLUTION NO: 24-0410-17v**

**STATE OF CALIFORNIA  
STATE ENERGY RESOURCES  
CONSERVATION AND DEVELOPMENT COMMISSION**

**RESOLUTION: ev.energy Corp.**

**RESOLVED**, that the State Energy Resources Conservation and Development Commission (CEC) adopts the staff CEQA findings contained in the Agreement or Amendment Request Form (as applicable); and

**RESOLVED**, that the CEC approves agreement ZVI-23-016 with ev.energy Corp. for up to \$41,295,244. This agreement initially provides \$1,597,084 to scale the adoption of dynamic tariffs and demand response programs across California through an equipment-agnostic charge management platform to 1,000 deployments. Additional funding, up to \$41,295,244 total, may, with approval of the CEC's Executive Director through an amendment, be added to scale dynamic tariff adoption to 275,000 deployments; and

**FURTHER BE IT RESOLVED**, that the Executive Director or their designee shall execute the same on behalf of the CEC.

**CERTIFICATION**

The undersigned Secretariat to the CEC does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the CEC held on April 10, 2024.

## GRANT REQUEST FORM (GRF)

### A. New Agreement Number

**IMPORTANT:** New Agreement # to be completed by Contracts, Grants, and Loans Office.

**New Agreement Number:** ZVI-23-016

### B. Division Information

1. Division Name: Fuels & Transportation
2. Agreement Manager: Taylor Nguyen
3. MS:6
4. Phone Number: 916-897-3805

### C. Recipient's Information

1. Recipient's Legal Name: ev.energy Corp.
2. Federal ID Number: 38-4138875

### D. Title of Project

Title of project: ChargeWise CA

### E. Term and Amount

1. Start Date: 04/10/2024
2. End Date: 12/31/2026
3. Amount: Up to \$41,295,244  
(\$1,597,084 identified for Phase 1, \$39,698,160 to be identified for Phase 2)

### F. Business Meeting Information

1. Are the ARFVTP agreements \$75K and under delegated to Executive Director? No
2. The Proposed Business Meeting Date: 4/10/2024
3. Consent or Discussion? Consent
4. Business Meeting Presenter Name: Taylor Nguyen
5. Time Needed for Business Meeting: N/A
6. The email subscription topic is: Vehicle-Grid Integration

#### **Agenda Item Subject and Description:**

ev.energy Corp. Proposed resolution approving agreement ZVI-23-016 with ev.energy Corp. for up to \$41,295,244, and adopting staff's determination that this action is exempt from CEQA. This agreement initially provides \$1,597,084 to scale the adoption of dynamic tariffs and demand response programs across California through an equipment-agnostic charge management platform to 1,000 deployments. Additional funding, up to \$41,295,244 total, may, with approval of the CEC's Executive Director through an amendment, be added to scale dynamic tariff adoption to 275,000 deployments. (Clean Transportation Program Funding and General Fund Funding). Contact: Taylor Nguyen

### G. California Environmental Quality Act (CEQA) Compliance

#### **1. Is Agreement considered a "Project" under CEQA?**

Yes

If yes, skip to question 2.

If no, complete the following (PRC 21065 and 14 CCR 15378) and explain why Agreement is not considered a “Project”:

**2. If Agreement is considered a “Project” under CEQA answer the following questions.**

a) Agreement **IS** exempt?

N/A

Statutory Exemption?

N/A

If yes, list PRC and/or CCR section number(s) and separate each with a comma. If no, enter “None” and go to the next question.

PRC section number: N/A

CCR section number: N/A

Categorical Exemption?

N/A

If yes, list CCR section number(s) and separate each with a comma. If no, enter “None” and go to the next question.

CCR section number: N/A

Common Sense Exemption? 14 CCR 15061 (b) (3)

Yes

If yes, explain reason why Agreement is exempt under the above section. If no, enter “Not applicable” and go to the next section.

There is no possibility that work under this agreement will have a significant effect on the environment because work under this agreement will not involve any physical installation or construction. Rather, work under this project will entail connection of existing charge points with vehicles through digital means.

b) Agreement **IS NOT** exempt.

**IMPORTANT:** consult with the legal office to determine next steps.

N/A

If yes, answer yes or no to all that applies. If no, list all as “no” and “None” as “yes”.

<b>Additional Documents</b>	<b>Applies</b>
Initial Study	N/A
Negative Declaration	N/A
Mitigated Negative Declaration	N/A
Environmental Impact Report	N/A
Statement of Overriding Considerations	N/A
None	N/A

**H. Subcontractors**

List all Subcontractors listed in the Budget (s) (major and minor). Insert additional rows if needed. If no subcontractors to report, enter “No subcontractors to report” and “0” to funds.

**Delete** any unused rows from the table

Subcontractor Legal Company Name	CEC Funds	Match Funds
No subcontractors to report	\$ 0	\$0

**I. Vendors and Sellers for Equipment and Materials/Miscellaneous**

List all Vendors and Sellers listed in Budget(s) for Equipment and Materials/Miscellaneous. Insert additional rows if needed. If no vendors or sellers to report, enter “No vendors or sellers to report” and “0” to funds. **Delete** any unused rows from the table.

Vendor/Seller Legal Company Name	CEC Funds	Match Funds
WATTTIME CORPORATION (Phase 1)	\$27,000	\$9,000
SmartCar Inc. (Phase 1)	\$3,000	\$1,000

**J. Key Partners**

List all key partner(s). Insert additional rows if needed. If no key partners to report, enter “No key partners to report.” **Delete** any unused rows from the table.

Key Partner Legal Company Name
Southern California Edison
Marin Clean Energy
Silicon Valley Clean Energy
Leap
WattTime Corp.
Peninsula Clean Energy

**K. Budget Information**

Include all budget information. Insert additional rows if needed. If no budget information to report, enter “N/A” for “Not Applicable” and “0” to Amount. **Delete** any unused rows from the table.

Funding Source	Funding Year of Appropriation	Budget List Number	Amount
ARFVTF	2020-2021	601.118M	\$597,084
General Fund	2021-2022	601.129ZEV	\$1,000,000
TBD (Phase 2)	N/A	N/A	Up to \$39,698,160

**TOTAL Amount: \$41,295,244**

R&D Program Area: N/A

Explanation for "Other" selection: N/A

Reimbursement Contract #: N/A

Federal Agreement #: N/A

**L. Recipient's Contact Information**

**1. Recipient's Administrator/Officer**

Name: William Goldsmith

Address: 2100 Geng Road, Suite 210

City, State, Zip: Palo Alto, CA 94303

Phone: Recipient's Administrator/Officer Phone Number

E-Mail: william.goldsmith@ev.energy

**2. Recipient's Project Manager**

Name: Michael Kenefick

Address: 2100 Geng Road, Suite 210

City, State, Zip: Palo Alto, CA 94303

Phone: Recipient's Project Manager Phone Number

E-Mail: michael.kenefick@ev.energy

**M. Selection Process Used**

There are three types of selection process. List the one used for this GRF.

Selection Process	Additional Information
Competitive Solicitation #	GFO-22-609

**N. Attached Items**

1. List all items that should be attached to this GRF by entering "Yes" or "No".

Item Number	Item Name	Attached
1	Exhibit A, Scope of Work/Schedule	Yes
2	Exhibit B, Budget Detail	Yes
3	CEC 105, Questionnaire for Identifying Conflicts	Yes
4	Recipient Resolution	No
5	Awardee CEQA Documentation	No

**Approved By**

STATE OF CALIFORNIA  
CALIFORNIA ENERGY COMMISSION

Grant Request Form  
CEC-270 (Revised 10/2022)

Individuals who approve this form must enter their full name and approval date in the MS Word version.

**Agreement Manager:** Taylor Nguyen

**Approval Date:** 11/20/2023

**Office Manager:** Jaron Weston

**Approval Date:** 2/14/24

**Deputy Director:** Jennifer Kalafut

**Approval Date:** [OBJ]

## Attachment 1 Exhibit A SCOPE OF WORK

### TECHNICAL TASK LIST

Task #	CPR	Task Name
1		Administration
2	X	Phase 1 Product Development
3	X	Phase 1 Customer Deployment
4		Performance Data Collection and Analysis
5	X	Phase 2 Customer Deployment
6		Operations and Reliability*
7		Semi-Annual Electric Vehicle Charger Inventory Reports (for charging infrastructure projects)*
8		Other Data Collection and Analysis*
9		Project Fact Sheet

\* Some or all subtasks may not apply to specific deployments. See language in the specific tasks for exclusions.

### KEY NAME LIST

Task #	Key Personnel	Key Subrecipient(s)	Key Partner(s)
1	Rachel Jessup		
2	John Mead		WattTime, Leap
3	Keenan Taylor		Silicon Valley Clean Energy (SVCE), Peninsula Clean Energy (PCE), Marin Clean Energy (MCE), Southern California Edison (SCE)
4	Addie Melvin		
5	Keenan Taylor		SVCE, PCE, MCE, SCE
6	Michael Kenefick		

Task #	Key Personnel	Key Subrecipient(s)	Key Partner(s)
7	Michael Kenefick		
8	Rachel Jessup		
9	Rachel Jessup		

## GLOSSARY

*Specific terms and acronyms used throughout this scope of work are defined as follows:*

Term/ Acronym	Definition
AC Level 2	A charger that operates on a circuit from 208 volts to 240 volts and transfers alternating-current (AC) electricity to a device in an electric vehicle (EV) that converts AC to direct current to charge an EV battery.
AMI	Advanced metering infrastructure
API	Application programming interface. A type of software interface that offers service to other pieces of software. An API allows two or more computer programs to communicate with each other.
CAM	Commission Agreement Manager
CAO	Commission Agreement Officer
CCA	Community choice aggregator
CEC	California Energy Commission
Charge attempt	Any instance of an EV driver taking action to initiate a charging session by taking one or all of the following steps in any order: 1) attaching the connector to the EV appropriately or 2) attempting to authorize a charging session by use of radio frequency identification (RFID) technology, credit card, charging network provider smartphone application (app), screen input, or calling the charging network provider's customer service number.
Charger	A device with one or more charging ports and connectors for charging EVs. Also referred to as electric vehicle supply equipment (EVSE).
Charging network	A collection of chargers located on one or more property(ies) that are connected via digital communications to manage the facilitation of payment, the facilitation of electrical charging, and any related data requests.
Charging network provider	The entity that provides the digital communication network that remotely manages the chargers. Charging network providers may also serve as charging station operators and/or manufacture chargers.

<b>Term/ Acronym</b>	<b>Definition</b>
Charging port	The system within a charger that charges one EV. A charging port may have multiple connectors, but it can provide power to charge only one EV through one connector at a time.
Charging session	The period after a charge attempt during which the EV is allowed to request energy. Charging sessions can be terminated by the customer, the EV, the charger, the charging station operator, or the charging network provider.
Charging station	The area in the immediate vicinity of one or more chargers and includes the chargers, supporting equipment, parking areas adjacent to the chargers, and lanes for vehicle ingress and egress. A charging station could comprise only part of the property on which it is located.
Charging station management system	A system that may be used to operate a charger, to authorize use of the charger, or to record or report charger data, such as by using the Open Charge Point Protocol (OCPP).
Charging station operator	The entity that owns the chargers and supporting equipment and facilities at one or more charging stations. Although this entity may delegate responsibility for certain aspects of charging station operation and maintenance to subrecipients, this entity retains responsibility for operation and maintenance of chargers and supporting equipment and facilities. In some cases, the charging station operator and the charging network provider are the same entity.
Connector	The device that attaches an EV to a charging port in order to transfer electricity.
Corrective maintenance	Maintenance that is carried out after failure detection and is aimed at restoring an asset to a condition in which it can perform its intended function.
CPR	Critical Project Review
CPUC	California Public Utilities Commission
CTP	Clean Transportation Program
Depot	Type of “home base” behind-the-fence location where a vehicle is typically kept when not in use (usually parked on a nightly basis).
DCFC	Direct current fast charger. A charger that enables rapid charging by delivering direct-current (DC) electricity directly to an EV's battery.
Downtime	A period of time that a charger is not capable of successfully dispensing electricity or otherwise not functioning as designed. Downtime is calculated pursuant to Task 6.4.

<b>Term/ Acronym</b>	<b>Definition</b>
DSGS	Demand Side Grid Support (Program)
ELRP	Emergency Load Reduction Program
EV	Electric vehicle. A vehicle that is either partially or fully powered on electric power received from an external power source. For the purposes of this Agreement, this definition does not include golf carts, electric bicycles, or other micromobility devices.
EVSE	Electric vehicle supply equipment. A charger as defined.
Excluded downtime	Downtime that is caused by events pursuant to Task 6.4.
Failed charging session	Following a charge attempt, the criteria for a successful charging session were not met.
FTD	Fuels and Transportation Division
Hardware	The machines, wiring, and other physical components of an electronic system including onboard computers and controllers.
Inoperative state	The charger or charging port is not operational.
Installed	Attached or placed at a location and available for use for a charging session. The date a charger is installed is the date it is first available for use for a charging session.
Interoperability	Successful communication between the software, such as the software controlling charging on the EV and the software controlling the charger. Interoperability failures are communication failures between the EV and charger that occur while the software of each device is operating as designed. Interoperability failure leads to failed charging sessions.
ISO	International Organization for Standardization
Maintenance	Any instance in which preventive or corrective maintenance is carried out on equipment.
MCE	Marin Clean Energy
MIDAS	Market Informed Demand Automation Server
Networked	A charger can receive or send commands or messages remotely from or to a charging network provider or is otherwise connected to a central management system, such as by using OCPP 2.0.1, for the purposes of charger management and data reporting.

<b>Term/ Acronym</b>	<b>Definition</b>
Nonnetworked charger	A charger that is not networked.
OCCP	Open Charge Point Protocol. An open-source communication protocol that specifies communication between chargers and the charging networks that remotely manage the chargers.
Operational	Or “up.” A charging port’s hardware and software are both online and available for use, or in use, and the charging port is capable of successfully dispensing electricity.
Operative state	The charger is operational.
PCE	Peninsula Clean Energy
Preventative maintenance	Maintenance that is performed on physical assets to reduce the chances of equipment failure and unplanned machine downtime.
Private	Charging ports located at parking space(s) that are privately owned and operated, often dedicated to a specific driver or vehicle (for example, a charging port installed in a garage of a single-family home).
Public	Charging ports located at parking space(s) designated by the property owner or lessee to be available to and accessible by the public.
Recipient	ev.energy Corp.
REDWDS	Responsive, Easy Charging Products with Dynamic Signals (title of the solicitation GFO-22-609)
SCE	Southern California Edison
Shared Private	Charging ports located at parking space(s) designated by a property owner or lessee to be available to, and accessible by, employees, tenants, visitors, and residents. Examples include workplaces and shared parking at multifamily residences.
Software	A set of instructions, data, or programs used to operate computers and execute specific tasks.
SOW	Scope of Work
Successful charging session	Following a charge attempt, a customer’s EV battery is charged to the state of charge the customer desires and is disconnected manually by the customer or by the EV’s onboard software system terminating the charging session, without an additional charge attempt.
SVCE	Silicon Valley Clean Energy

Term/ Acronym	Definition
Uptime	The time that a charger is installed during a reporting period excluding downtime pursuant to Task 6.4.

## Background

This Agreement is funded from both Clean Transportation Program funds as well as General Funds to support infrastructure deployment for zero-emission light-duty vehicles.

The Budget Act of 2021 (Assembly Bill (AB) 128, Ting, Chapter 21, Statutes of 2021, as amended by Senate Bill (SB) 129, Skinner, Chapter 69, Statutes of 2021 and SB 170, Skinner, Chapter 240, Statutes of 2021) appropriated \$785,000,000 from the General Fund to support infrastructure deployments and manufacturing projects for zero-emission light-duty and medium- and heavy-duty vehicles.

The Budget Act of 2022 (SB 154, Skinner, Chapter 43, Statutes of 2022, as amended by AB 178, Ting, Chapter 45, Statutes of 2022 and AB 179, Ting, Chapter 249, Statutes of 2022) and AB 211 (Committee on Budget, Chapter 574, Statutes of 2022) appropriated an additional \$754,000,000 from the General Fund to support infrastructure deployments, emerging opportunities, and manufacturing projects for zero-emission light-duty and medium- and heavy-duty vehicles.

Assembly Bill (AB) 118 (Núñez, Chapter 750, Statutes of 2007), created the Clean Transportation Program. The statute authorizes the CEC to develop and deploy alternative and renewable fuels and advanced transportation technologies to help attain the state’s climate change and clean air goals. AB 126 (Reyes, Chapter 319, Statutes of 2023) reauthorized the funding program through July 1, 2035 and focused the program on zero-emission transportation.

The Clean Transportation Program has an annual budget of approximately \$100 million and provides financial support for projects that:

- Develop and deploy zero-emission technology and fuels in the marketplace where feasible and near-zero-emission technology and fuels elsewhere.
- Produce alternative and renewable low-carbon fuels in California.
- Deploy zero-emission fuel infrastructure, fueling stations, and equipment where feasible and near-zero-emission fuel infrastructure, fueling stations, and equipment elsewhere.
- Establish workforce training programs and conduct public outreach on the benefits of alternative transportation fuels and vehicle technologies.

On March 10, 2023, the CEC released a Grant Funding Opportunity (GFO) entitled “GFO-22-609 Responsive, Easy Charging Products with Dynamic Signals (REDWDS).” This competitive grant solicitation was designed to accelerate the development and deployment of easy-to-use charging products which help customers manage electric vehicle (EV) charging and respond to dynamic grid signals. In response to GFO-22-609, the Recipient submitted application #10 which was proposed for funding in the CEC’s Notice of Proposed Awards on September 29, 2023. GFO-22-609 and Recipient’s application are hereby incorporated by reference into this Agreement in their entirety.

In the event of any conflict or inconsistency between the terms of the Solicitation and the terms of the Recipient’s Application, the Solicitation shall control. In the event of any conflict or inconsistency between the Recipient’s Application and the terms of this Agreement, this Agreement shall control. Similarly, in the event of any conflict or inconsistency between the terms of this Agreement and the Solicitation, the terms of this Agreement shall control.

**Problem Statement:**

California energy utilities employ a range of signal-based strategies to enable and incentivize widespread customer load shift in response to grid conditions, including demand response, other event-based signals, and rates. To realize load shift, customers and their devices must be able to easily access and respond to these dynamic grid signals. This solicitation will help develop and deploy charging products that help customers respond to dynamic grid signals while ensuring that customer charging and mobility needs are met.

**Goals of the Agreement:**

The goal of this Agreement is to develop and deploy products that enable charging load flexibility, which supports transportation electrification, grid decarbonization, and electric system reliability.

**Objectives of the Agreement:**

The objectives of this Agreement are to:

- Develop easy to use and interoperable EV charging products which help customers manage charging in response to customer needs and dynamic grid signals. Charging products may include but are not limited to charging network software, vehicle software, unidirectional EVSE, bidirectional EVSE, and aggregator products.
  - Enhance Recipient’s existing managed EV charging app to provide a seamless manner for California EV drivers to leverage an augmented customer interface and increased interoperability to automatically respond to dynamic grid signals and understand their impact on the electricity grid..
  - Integrate with additional dynamic signals that allow the Recipient to optimize managed charging for EV drivers.

- Deploy the above products to customers throughout California, including customers enrolled on dynamic electricity rates and those located in priority communities.
  - Enroll 1,000 EV drivers into the ChargeWise program in partnership with energy utilities and community choice aggregators (CCAs) in Phase 1, 50 percent of which will be in disadvantaged communities and 30 percent on a dynamic rate.
  - Enroll 275,000 EV drivers across California into the ChargeWise program in Phase 2, 50 percent of which will be in disadvantaged communities and 50 percent on a dynamic rate.

## **TASK 1 ADMINISTRATION**

### **Task 1.1 Attend Kick-off Meeting**

The goal of this task is to establish the lines of communication and procedures for implementing this Agreement. The Commission Agreement Manager (CAM) shall designate the date and location of this meeting and provide an agenda to the Recipient prior to the meeting.

#### **The Recipient shall:**

- Attend a “Kick-Off” meeting that includes the CAM and may include the Commission Agreement Officer (CAO) and a representative of the CEC Accounting Office. The Recipient shall bring their Project Manager, Agreement Administrator, Accounting Officer, and any others determined necessary by the Recipient or specifically requested by the CAM to this meeting.
- Provide a written statement of project activities that have occurred after the notice of proposed awards but prior to the execution of the agreement using match funds. If none, provide a statement that no work has been completed using match funds prior to the execution of the agreement. All pre-execution match expenditures must conform to the requirements in the Terms and Conditions of this Agreement.
- Discuss the following administrative and technical aspects of this Agreement:
  - Agreement Terms and Conditions
  - Critical Project Review (Task 1.2)
  - Match fund documentation (Task 1.7) No reimbursable work may be done until this documentation is in place.
  - Permit documentation (Task 1.8)
  - Subawards needed to carry out project (Task 1.9)

- The CAM's expectations for accomplishing tasks described in the Scope of Work
- An updated Schedule of Products and Due Dates
- Monthly Calls (Task 1.4)
- Quarterly Progress Reports (Task 1.5)
- Technical Products (Product Guidelines located in Section 5 of the Terms and Conditions)
- Final Report (Task 1.6)

**Recipient Products:**

- Updated Schedule of Products
- Updated List of Match Funds
- Updated List of Permits
- Written Statement of Match Share Activities

**Commission Agreement Manager Product:**

- Kick-Off Meeting Agenda

**Task 1.2 Critical Project Review (CPR) Meetings**

CPRs provide the opportunity for frank discussions between the CEC and the Recipient. The goal of this task is to determine if the project should continue to receive CEC funding to complete this Agreement and to identify any needed modifications to the tasks, products, schedule or budget.

The CAM may schedule CPR meetings as necessary, and meeting costs will be borne by the Recipient.

Meeting participants include the CAM and the Recipient and may include the CAO, the Fuels and Transportation Division (FTD) program lead, other CEC staff and Management as well as other individuals selected by the CAM to provide support to the CEC.

**The CAM shall:**

- Determine the location, date, and time of each CPR meeting with the Recipient. These meetings generally take place at the CEC, but they may take place at another location or remotely.
- Send the Recipient the agenda and a list of expected participants in advance of each CPR. If applicable, the agenda shall include a discussion on both match funding and permits.
- Conduct and make a record of each CPR meeting. Prepare a schedule for providing the written determination described below.

- Determine whether to continue the project, and if continuing, whether or not modifications are needed to the tasks, schedule, products, and/or budget for the remainder of the Agreement. Modifications to the Agreement may require a formal amendment (please see section 8 of the Terms and Conditions). If the CAM concludes that satisfactory progress is not being made, this conclusion will be referred to the Lead Commissioner for Transportation for his or her concurrence.
- Provide the Recipient with a written determination in accordance with the schedule. The written response may include a requirement for the Recipient to revise one or more product(s) that were included in the CPR.

**The Recipient shall:**

- Prepare a *CPR Report* for each CPR that discusses the progress of the Agreement toward achieving its goals and objectives. This report shall include recommendations and conclusions regarding continued work of the projects. This report shall be submitted along with any other products identified in this scope of work. The Recipient shall submit these documents to the CAM and any other designated reviewers at least 15 working days in advance of each CPR meeting.
- Present the required information at each CPR meeting and participate in a discussion about the Agreement.

**CAM Products:**

- Agenda and a list of expected participants
- Schedule for written determination
- Written determination

**Recipient Product:**

- CPR Report(s)

○ **Task 1.3 Final Meeting**

The goal of this task is to closeout this Agreement.

**The Recipient shall:**

- Meet with CEC staff to present the findings, conclusions, and recommendations. The final meeting must be completed during the closeout of this Agreement.

This meeting will be attended by, at a minimum, the Recipient and the CAM. The technical and administrative aspects of Agreement closeout will be discussed at the meeting, which may be two separate meetings at the discretion of the CAM.

The technical portion of the meeting shall present an assessment of the degree to which project and task goals and objectives were achieved, findings, conclusions, recommended next steps (if any) for the Agreement, and recommendations for improvements. The CAM will determine the appropriate meeting participants.

The administrative portion of the meeting shall be a discussion with the CAM about the following Agreement closeout items:

- What to do with any equipment purchased with CEC funds (Options)
- CEC request for specific “generated” data (not already provided in Agreement products)
- Need to document Recipient’s disclosure of “subject inventions” developed under the Agreement, if applicable
- “Surviving” Agreement provisions
- Final invoicing and release of retention
- Prepare a schedule for completing the closeout activities for this Agreement.

**Products:**

- Written documentation of meeting agreements
- Schedule for completing closeout activities

**Task 1.4 Monthly Calls**

The goal of this task is to have calls at least monthly between CAM and Recipient to verify that satisfactory and continued progress is made towards achieving the objectives of this Agreement on time and within budget.

The objectives of this task are to verbally summarize activities performed during the reporting period, to identify activities planned for the next reporting period, to identify issues that may affect performance and expenditures, to verify match funds are being proportionally spent concurrently or in advance of CEC funds or are being spent in accordance with an approved Match Funding Spending Plan, to form the basis for determining whether invoices are consistent with work performed, and to answer any other questions from the CAM. Monthly calls might not be held on those months when a quarterly progress report is submitted, or the CAM determines that a monthly call is unnecessary.

**The CAM shall:**

- Schedule monthly calls.
- Provide questions to the Recipient prior to the monthly call.
- Provide call summary notes to Recipient of items discussed during call.

**The Recipient shall:**

- Review the questions provided by CAM prior to the monthly call
- Provide verbal answers to the CAM during the call.

**Product:**

- Email to CAM concurring with call summary notes.

**Task 1.5 Quarterly Progress Reports**

The goal of this task is to periodically verify that satisfactory and continued progress is made towards achieving the objectives of this Agreement on time and within budget.

The objectives of this task are to summarize activities performed during the reporting period, to identify activities planned for the next reporting period, to identify issues that may affect performance and expenditures, and to form the basis for determining whether invoices are consistent with work performed.

**The Recipient shall:**

- Prepare a *Quarterly Progress Report* which summarizes all Agreement activities conducted by the Recipient for the reporting period, including an assessment of the ability to complete the Agreement within the current budget and any anticipated cost overruns. Progress reports are due to the CAM the 10<sup>th</sup> day of each January, April, July, and October. The Quarterly Progress Report template can be found on the ECAMS Resources webpage available at <https://www.energy.ca.gov/media/4691>.

**Product:**

- Quarterly Progress Reports

**Task 1.6 Final Report**

The goal of the Final Report is to assess the project's success in achieving the Agreement's goals and objectives, advancing science and technology, and providing energy-related and other benefits to California.

The objectives of the Final Report are to clearly and completely describe the project's purpose, approach, activities performed, results, and advancements in science and technology; to present a public assessment of the success of the project as measured by the degree to which goals and objectives were achieved; to make insightful observations based on results obtained; to draw conclusions; and to make recommendations for further projects and improvements to the FTD project management processes.

The Final Report shall be a public document and is limited to 25-pages. If the Recipient has obtained confidential status from the CEC and will be preparing a confidential version of the Final Report as well, the Recipient shall perform the following activities for both the public and confidential versions of the Final Report.

In addition to any other applicable requirements, the Final Report must comply with the Americans with Disabilities Act (ADA) of 1990 (42 U.S.C. 12101 et seq.), which prohibits discrimination on the basis of disability; all applicable regulations and guidelines issued pursuant to the ADA; Cal. Gov. Code sects. 7405 and 11135; and Web Content Accessibility Guidelines 2.0, or a subsequent version, as published by the Web Accessibility Initiative of the World Wide Web Consortium at a minimum Level AA success criteria.

**The Recipient shall:**

- Prepare an *Outline of the Final Report*, if requested by the CAM.
- Prepare a *Draft Final Report* complying with ADA requirements and following the latest version of the Final Report guidelines which will be provided by the CAM. The CAM shall provide written comments on the Draft Final Report within fifteen (15) working days of receipt. The Final Report must be completed at least 60 days before the end of the Agreement Term.
- Submit *Final Report* in Microsoft Word format or similar electronic format as approved by the CAM.

**Products:**

- Outline of the Final Report, if requested
- Draft Final Report
- Final Report

**Task 1.7 Identify and Obtain Matching Funds**

The goal of this task is to ensure that the match funds planned for this Agreement are obtained for and applied to this Agreement during the term of this Agreement.

The costs to obtain and document match fund commitments are not reimbursable through this Agreement. Although the CEC budget for this task will be zero dollars, the Recipient may utilize match funds for this task. Match funds must be identified in writing and the associated commitments obtained before the Recipient can incur any costs for which the Recipient will request reimbursement.

**The Recipient shall:**

- Prepare a letter documenting the match funding committed to this Agreement and submit it to the CAM at least 2 working days prior to the kick-off meeting. If no match funds were part of the proposal that led to the CEC awarding this Agreement and none have been identified at the time this Agreement starts, then state such in the letter. If match funds were a part of the proposal that led to the CEC awarding this Agreement, then provide in the letter a list of the match funds that identifies the:
  - Amount of each cash match fund, its source, including a contact name, address and telephone number and the task(s) to which the match funds will be applied.

- Amount of each in-kind contribution, a description, documented market or book value, and its source, including a contact name, address and telephone number and the task(s) to which the match funds will be applied. If the in-kind contribution is equipment or other tangible or real property, the Recipient shall identify its owner and provide a contact name, address and telephone number, and the address where the property is located.
- Provide a copy of the letter of commitment from an authorized representative of each source of cash match funding or in-kind contributions that these funds or contributions have been secured. For match funds provided by a grant a copy of the executed grant shall be submitted in place of a letter of commitment.
- Discuss match funds and the implications to the Agreement if they are reduced or not obtained as committed, at the kick-off meeting. If applicable, match funds will be included as a line item in the progress reports and will be a topic at CPR meetings.
- Provide the appropriate information to the CAM if during the course of the Agreement additional match funds are received.
- Notify the CAM within 10 days if during the course of the Agreement existing match funds are reduced. Reduction in match funds must be approved through a formal amendment to the Agreement and may trigger an additional CPR meeting.

**Products:**

- A letter regarding match funds or stating that no match funds are provided
- Copy(ies) of each match fund commitment letter(s) (if applicable)
- Letter(s) for new match funds (if applicable)
- Letter that match funds were reduced (if applicable)

**Task 1.8 Identify and Obtain Required Permits**

The goal of this task is to obtain all permits required for work completed under this Agreement in advance of the date they are needed to keep the Agreement schedule on track.

Permit costs and the expenses associated with obtaining permits are not reimbursable under this Agreement. Although the CEC budget for this task will be zero dollars, the Recipient may budget match funds for any expected expenditures associated with obtaining permits. Permits must be identified in writing and obtained before the Recipient can make any expenditure for which a permit is required.

**The Recipient shall:**

- Prepare a letter documenting the permits required to conduct this Agreement and submit it to the CAM at least 2 working days prior to the kick-off meeting. If there are no permits required at the start of this Agreement, then state such in the letter. If it is known at the beginning of the Agreement that permits will be required during the course of the Agreement, provide in the letter:
  - A list of the permits that identifies the:
    - Type of permit
    - Name, address and telephone number of the permitting jurisdictions or lead agencies
  - The schedule the Recipient will follow in applying for and obtaining these permits.
- Discuss the list of permits and the schedule for obtaining them at the kick-off meeting and develop a timetable for submitting the updated list, schedule and the copies of the permits. The implications to the Agreement if the permits are not obtained in a timely fashion or are denied will also be discussed. If applicable, permits will be included as a line item in the Progress Reports and will be a topic at CPR meetings.
- If during the course of the Agreement additional permits become necessary, provide the appropriate information on each permit and an updated schedule to the CAM.
- As permits are obtained, send a copy of each approved permit to the CAM.
- If during the course of the Agreement permits are not obtained on time or are denied, notify the CAM within 5 working days. Either of these events may trigger an additional CPR.

**Products:**

- Letter documenting the permits or stating that no permits are required
- A copy of each approved permit (if applicable)
- Updated list of permits as they change during the term of the Agreement (if applicable)
- Updated schedule for acquiring permits as changes occur during the term of the Agreement (if applicable)
- A copy of each final approved permit (if applicable)

### **Task 1.9 Obtain and Execute Subawards**

The goal of this task is to ensure quality products and to procure subrecipients required to carry out the tasks under this Agreement consistent with the Agreement Terms and Conditions and the Recipient's own procurement policies and procedures.

#### **The Recipient shall:**

- Manage and coordinate subrecipient activities.
- Submit a *letter* to the CAM describing the subawards needed or stating that no subawards are required.
- If requested by the CAM, submit a *draft of each subaward* required to conduct the work under this Agreement to the CAM for review.
- If requested by the CAM, submit a *final copy of each executed subaward*.
- If Recipient intends to add new subrecipients or change subrecipients, then the Recipient shall notify the CAM.

#### **Products:**

- Letter describing the subawards needed, or stating that no subawards are required
- Draft subaward (if requested)
- Final subaward (if requested)

### **Task 1.10 Handling CEC Or Third-Party Confidential Information and Personal Information**

#### **The Recipient shall:**

- Submit signed Information Security Program Plan Attestation that Recipient has an Information Security Program Plan (ISPP) that meets the minimum requirements as stated in SAM 5300 and any other applicable law. CAM will provide ISPP Attestation form.
- Submit signed Non-Disclosure Agreements (NDAs) from Recipient and subrecipient employees prior to the sharing of confidential information with the employees. CAM will provide NDA form.
- Recipient shall ensure that all individuals employed by Recipient or a subrecipient who will have access to confidential information take an annual security awareness training and submit the Employee Security Awareness Training Certificates.
- Submit verification that confidential information and personal information is destroyed at agreement end (or when work is completed).

#### **Products:**

- Signed non-disclosure agreement from Recipient and subrecipient employees
- Signed Information Security Program Plan Attestation Form

- Employee Security Awareness Training Certificates
- Verification of destruction of confidential information and personal information

## **TECHNICAL TASKS**

### **TASK 2 PHASE 1 PRODUCT DEVELOPMENT**

The goal of this task is to develop one or more charging products which meet the minimum requirements outlined in Section II.B.1 of the solicitation manual. The product will integrate with transactive energy tariffs and a range of grid signals including forecasted and real time grid carbon emission intensity and CAISO wholesale markets.

#### **The Recipient shall:**

- Develop one or more charging products capable of, at minimum:
  - Automatically retrieving dynamic grid signals including but not limited to electricity rates and Flex Alerts from the Market Informed Demand Automation Server (MIDAS), Emergency Load Reduction Program (ELRP) events, and Demand Side Grid Support (DSGS) events.
  - Optimizing the charging schedule in response to the dynamic signals described in the previous bullet and customer needs and preferences.
  - Collecting inputs, explaining how charging will be optimized, explaining how responding to grid signals will create value for the customer, and notifying the customer of additional savings opportunities using one or more customer-facing interfaces.
  - Enabling drivers to do all of the following:
    - Learn about utility partner programs and tariffs and take steps to enroll from the web or app.
    - Understand how their charging was optimized through seeing data about the time-varying cost of power during their session.
    - With connected vehicles, set maximum (target) and minimum states of charge to ensure their charging schedule meets their mobility requirements.
    - See an improved rewards experience through the app, allowing them to see the rewards incentives they've earned per session and claim those rewards within the app. CAM must approve any proposed incentives before they are offered to participants.
    - Connect a bidirectional charger, monitor bidirectional charger status, and view bidirectional charging session history in-app.
    - Have their charging optimized based on inputs from multiple grid signals.
    - Add more than one vehicle in the app. The app will display charging information for each vehicle.

- Consent to sharing their advanced metering infrastructure (AMI) data so that the Recipient can enroll them in grid markets and flexibility services.
- Connect their utility account during onboarding for simpler authentication and verification.
- Connect to a greater selection of OCPP-compatible chargers during onboarding.
- Connect to a greater selection of vehicles during onboarding.
- Learn about the product and its capabilities through a public website and download the product through the Apple App Store and Google Play Store.
- The product will be able to do all of the following:
  - Record charging power in kilowatts, connector status, and real-time electricity price (in dollars per kilowatt-hour) for each deployed asset at 15-minute intervals (or more frequently).
  - Receive multiple dynamic grid signals and incorporate those signals into the generation of optimal charging schedules. Those signals include Flex Alerts, Emergency Alerts for the ELRP and DSGS, Southern California Edison's (SCE's) dynamic rate, marginal electricity emissions forecasts, and CAISO day-ahead market prices.
- Develop all of the following additional product features:
  - Support for executing transactive energy tenders and participating in the SCE Dynamic Rates Pilot
  - Submetering of EVSE charging load using a meter compliant with the California Public Utilities Commission (CPUC) submetering protocol
  - Other additional capabilities:
    - Automatically retrieve signals from WattTime's carbon feed application programming interface (API)
    - Integrate with an API to respond to CAISO wholesale market signals
  - Demonstrate that the product meets the minimum interoperability requirements described in the GFO manual, including but not limited to:
    - For charging station management system products:

Provide link to Open Charge Alliance certification for OCPP 1.6 or later (core and security profiles at minimum). The product must support network migration without the need for additional fees, tools, or site visits.

- For vehicle telematics-based products: The product must be compatible with multiple vehicle makes and models.
- 

**Products:**

1. Evidence of product development, product capabilities, product testing, and ultimately customer availability of the product, including the following:
  - Summary of planned product development roadmap
  - Summary of planned product capabilities:
2. Evidence that the product meets the minimum interoperability requirements.

**TASK 3 PHASE 1 CUSTOMER DEPLOYMENT**

The goal of this task is to deploy the product developed under Task 2 to customers and meet the customer deployment minimum requirements outlined in Section II.B.2 of the solicitation manual.

**The Recipient shall:**

1. Accumulate 100 or more deployment credits as described in Section II.B.2 of the solicitation manual. The Recipient shall meet this requirement with the following planned deployments:

**Table 1: Summary of Planned Phase 1 Deployments**

<b>Deployment Type</b>	<b>Number of Deployments</b>	<b>Calculated Deployment Credits</b>
Existing EVSE connected to product (for charging station management systems and other EVSE based products)	100	<= 100*1> 1 credit per deployment
Existing EV connected to product (for telematics aggregators and other EV based products)	900	<= 900*1> 1 credit per deployment
<b>Total</b>	1,000	1,000

2. Ensure:
  - Deployments span at least three California electric utility customer accounts at unique service addresses.
  - All deployments are in California.

- At least 50 percent of deployments are in a disadvantaged or low-income community based on the California Climate Investments Priority Populations 2022 CES 4.0 map.
  - At least 35 percent of deployments are with customers who enroll in a dynamic or transactive energy rate, and that all remaining deployments are with customers enrolled in a time varying rate, such as a time of use rate.
  - All deployments must be at existing structures or facilities and involve negligible or no expansion of the existing or former use.
3. Include the following additional deployment features:
- Deployments with customers participating in the SCE Dynamic Rates Pilot (transactive energy)
4. Coordinate with external parties:
- Coordinate with project team partners at Southern California Edison to ensure successful and timely customer deployment of the ChargeWise SoCal (SCE) program component.
  - Coordinate with partners at CCAs: MCE, Silicon Valley Clean Energy, and Peninsula Clean Energy, to launch direct marketing campaigns.
  - Coordinate marketing campaigns with channel partners to ensure successful and timely customer deployment of the ChargeWise CA (non-SCE) program component.
  - Set up a microsite website for the ChargeWise CA program.
  - Set up ads on Apple App Store, Google search Meta Ads across Facebook and Instagram, and the Propel mobile app.

**Products:**

1. Evidence of each completed customer deployment with the use of unique invite codes compiled in a document or shared folder, available to CEC upon request.
2. Entry of deployment information in the Customer Deployment Log (see next task and available template) for each completed customer deployment. (Note that the CEC has provided a Customer Deployment log template. Recipients may use an alternative Customer Deployment Log if all data fields from the CEC's template are included in the Recipient's alternative reporting format.)
3. Indication of participation in SCE Dynamic Rates pilot in the Customer Deployment Log for each participating deployment (use column G, "SCE Dynamic Rates Pilot?" in the Customer Deployment Log).
4. Evidence of coordination and coordination plans with external parties:
  - Evidence of coordination with CCA partners, including MCE, Silicon Valley Clean Energy, Peninsula Clean Energy, such as screenshots of direct marketing campaigns.

- Evidence of coordination with channel partners including ChargePoint, Propel, Ride and Drive Clean, and Grid Alternatives, such as screenshots of marketing campaigns.
- Link to the ChargeWise CA microsite.
- Evidence of Apple App Store, Google search Meta Ads across Facebook and Instagram, and the Propel mobile app, such as screenshots of ads.

#### **Task 4 Phase 1 & 2 PERFORMANCE DATA COLLECTION AND ANALYSIS**

The goal of this task is to collect, analyze, and report operational data from project deployments and meet the data reporting minimum requirements outlined in Section II.B.3 of the solicitation manual.

##### **The Recipient shall:**

- Develop plan for accurate and timely data collection and reporting for customer deployments.
- Record charging power in kilowatts (kW), connector status, and real-time electricity price (in \$/kWh) at 15-minute intervals or more frequently for each deployment. For deployments with bidirectional charging, charging power values must indicate when the vehicle is charging (positive) or discharging (negative). Connector status should indicate, at minimum: connected and charging, connected and not charging, and not connected.
- Calculate, record, and plot two normalized profiles as described in the Data Collection Reference section at the end of this document: One for all deployments with customers enrolled on dynamic rates, and one for all remaining deployments. Report these normalized profiles to CEC during each monthly call.
- Calculate the average price (\$/kWh) of electricity used for charging that month for each deployment. Any fixed monthly infrastructure charges, adders, or other fees not billed on a volumetric basis (by kWh) shall be noted but excluded from this reporting value. Report these average prices of electricity used for charging to CEC during each monthly call.
- For each deployment with a customer enrolled on a dynamic rate, calculate the average price (\$/kWh) of electricity for charging that would have been realized that month on an otherwise-applicable electricity rate. Projects shall select an otherwise-applicable electricity rate that can be reasonably viewed as the default time of use rate for a similar customer in the same utility territory. Report these otherwise-applicable prices of electricity used for charging to CEC during each monthly call.

- Maintain a Customer Deployment Log as described in Data Collection Reference section at the end of this document. (A template is provided by CEC; applicants may provide alternate reporting formats). Report the most up to date Customer Deployment Log to CEC during each monthly call.
- Calculate the average carbon emissions (gCO<sub>2</sub>/kWh) of electricity used for charging that month for each deployment. Segment these users by those deployments on a dynamic tariff, those on a time-of-use tariff and CAISO market integration, and those on a time-of-use tariff only. Report these average carbon emissions of electricity used for charging to CEC during each monthly call.
- For each deployment with a customer enrolled on a dynamic rate, calculate the average carbon emissions (gCO<sub>2</sub>/kWh) of electricity for charging that would have been realized that month on an otherwise-applicable electricity tariff. Projects shall select an otherwise-applicable electricity tariff that can be reasonably viewed as the default time of use tariff for a similar customer in the same utility territory. Report these otherwise-applicable carbon emissions of electricity used for charging to CEC during each monthly call.
- For each deployment with a customer enrolled with CAISO wholesale markets via Leap, report the number and duration of dispatches from the integration, and the value earned. Report this CAISO performance data to CEC during each monthly call.
- Conduct surveys with ChargeWise CA participants and non-participants to learn more about users' attitudes to charging management and dynamic tariffs.

**Products:**

- Customer deployment data collection and reporting plan.
- Collection and storage of 15-minute charging data. 15-minute charging data should be made available upon CEC request and does not need to be regularly reported otherwise. Data shall be available to CEC via a secure online data visualization dashboard.
- Two normalized profiles as described in the Data Collection Reference section at the end of this document, reported monthly to CEC: One for all deployments with customers enrolled on dynamic rates, and one for all remaining deployments. Data shall be available to CEC via a secure online data visualization dashboard.
- Report one average \$/kWh value of electricity used for charging that month for each deployment. These values shall be recorded and reported monthly to CEC in an aggregated spreadsheet. Data shall be available to CEC via a secure online data visualization dashboard.

- Report one average price (\$/kWh) of electricity for charging that would have been realized that month on an otherwise-applicable electricity rate for each deployment with a customer enrolled on a dynamic rate. These values shall be recorded and reported monthly to CEC in an aggregated spreadsheet. Data shall be available to CEC via a secure online data visualization dashboard.
- Maintenance of an accurate and up to date Customer Deployment Log. Report monthly to CEC.
- Report one average gCO<sub>2</sub>/kWh value of electricity used for charging that month for each deployment. These values shall be recorded and reported monthly to CEC in an aggregated spreadsheet. Data shall be available to CEC via a secure online data visualization dashboard.
- Report one average carbon emissions (gCO<sub>2</sub>/kWh) of electricity for charging that would have been realized that month on an otherwise-applicable electricity rate for each deployment with a customer enrolled on a dynamic rate. These values shall be recorded and reported monthly to CEC in an aggregated spreadsheet. Data shall be available to CEC via a secure online data visualization dashboard.
- Report average value (\$) for deployments integrated with CAISO wholesale markets. Data shall be available to CEC via a secure online data visualization dashboard.
- Results of customer surveys on attitudes to charging management and dynamic tariffs.

## **Task 5 PHASE 2 CUSTOMER DEPLOYMENT**

**Note: Work for Phase 2 activities is not initially funded under this grant agreement. This grant agreement may be amended at a future date to include funding for Phase 2 activities. The Recipient shall not proceed with work for any Phase 2 activities until this grant agreement is amended per the Special Terms and Conditions. See GFO-22-609 and Special Terms and Conditions: CEC may fund Phase 2 project activities on a first-come, first-served basis if CEC determines that specified performance metrics have been met. Projects may only access funding for Phase 2 if they meet certain performance metrics during Phase 1. Also, funding for Phase 2 is subject to future appropriations and is not guaranteed.**

The goal of this task is to deploy the product developed under Task 2 to additional customers and meet the customer deployment minimum requirements outlined in Section II.B.5 of the solicitation manual.

**If Phase 2 work is approved, the Recipient shall:**

1. Deploy their product(s) to additional customers. The Recipient shall meet this requirement with the following planned deployments:

**Table 2: Summary of Planned Phase 2 Deployments**

<b>Deployment Type</b>	<b>Number of Deployments</b>	<b>Calculated Deployment Credits</b>
Existing EVSE connected to product (for charging station management systems and other EVSE based products)	13,750	<= 13,750 *1> <i>1 credit per deployment</i>
Existing EV connected to product (for telematics aggregators and other EV based products)	261,250	<= 261,250 *1> <i>1 credit per deployment</i>
<b>Total</b>	275,000	275,000

2. Ensure:

- All deployments are in California.
- At least 50 percent of deployments are in a disadvantaged or low-income community based on the California Climate Investments Priority Populations 2022 CES 4.0 map.
- At least 50 percent of deployments are with customers who enroll in a dynamic or transactive energy rate, and that all remaining deployments are with customers enrolled in a time varying rate, such as a time of use rate.
- All deployments must be at existing structures or facilities and involve negligible or no expansion of the existing or former use.

3. Coordinate deployment:

- Coordinate with project team partners at Southern California Edison to ensure successful and timely customer deployment of the ChargeWise SoCal (SCE) program component.
- Coordinate with partners at CCAs: MCE, SVCE, and PCE, to launch direct marketing campaigns.
- Coordinate marketing campaigns with channel partners including ChargePoint, Propel, Ride and Drive Clean, and Grid Alternatives, to ensure successful and timely customer deployment of the ChargeWise CA (non-SCE) program component.
- Maintain and enhance microsite website for the ChargeWise CA program.
- Maintain and enhance ads on Apple App Store, Google search, Meta Ads across Facebook and Instagram, and the Propel mobile app.

## Products:

1. Evidence of each completed customer deployment (such as a photo of the installation, a screenshot of the EV or EVSE uniquely identified in a management dashboard, or similar) compiled in a document or shared folder, available to CEC upon request.
2. Entry of deployment information in the Customer Deployment Log (see Task 4 and available template) for each completed customer deployment.
3. Indication of participation in SCE Dynamic Rates pilot for in the Customer Deployment Log each participating deployment.
4. Evidence of planned coordination efforts with external parties:
  - Evidence of coordination with CCA partners, including MCE, SVCE, and PCE, such as screenshots of direct marketing campaigns.
  - Evidence of coordination with channel partners including ChargePoint, Propel, Ride and Drive Clean, and Grid Alternatives, such as screenshots of marketing campaigns.
  - Link to the ChargeWise CA microsite.
  - Evidence of Apple App Store, Google search Meta Ads across Facebook and Instagram, and the Propel mobile app, such as screenshots of ads.

## TASK 6 Phase 1 & 2 OPERATIONS AND RELIABILITY

Recipients shall comply with the following reliability performance standards, recordkeeping, reporting, and maintenance requirements (Requirements) in this Scope of Work (SOW) for electric vehicle chargers installed as part of this Agreement, **excluding any charger used solely for private use at a single-family residence or a multifamily housing unit with four or fewer units.** In the event the CEC adopts regulations that include Requirements, for example as required by Assembly Bill 2061 (Ting, Chapter 345, Statutes of 2022) and/or Assembly Bill 126 (Reyes, Chapter 319, Statutes of 2023), those Requirements shall supersede the Requirements contained in this SOW for this Agreement wherever, as determined by the CAM, they conflict or are redundant.

### Task 6.1 Operations

#### The Recipient Shall:

- Operate the installed charging ports during the term of this agreement.
- Ensure that the charging port uptime for each charging port installed in the project is at least 97 percent of each year for six years after the beginning of operation.

Without limitation to other rights and remedies which the CEC may have, including but not limited to survival provisions specified in the Terms and Conditions of this agreement, this requirement to ensure operability for six years after the beginning of operation shall survive the completion or termination date of this agreement. In addition to other requirements in the Terms and Conditions of this agreement, all CEC-reimbursable expenditures must be incurred within the agreement term.

## **Task 6.2 Recordkeeping**

The goal of this task is to collect, maintain, and transmit records of charging port operation and reliability to the CEC.

**For networked chargers**, the Recipient shall collect and retain the maintenance records specified in this section. The Recipient shall retain the services of a charging network provider that meets the criteria in 1. through 4. to record, retain, and transmit the remote monitoring data for networked chargers specified in this section.

1. The charging network provider must have an API of the CEC's choosing to permit the charging network provider to transfer the data required in this section directly to the CEC or the CEC's designee within 60 minutes of the record's generation.
2. The charging network provider must have Subset Certification of the Charging Station Management System in the Open Charge Alliance OCPP Certification Program for OCPP version 2.0.1, published May 24, 2023, or a subsequent version of OCPP for Core, Advanced Security, and ISO 15118 Support functionalities.
3. **For networked chargers**, the charging network provider's central system must have connection to the chargers using OCPP version 2.0.1 or a subsequent version of OCPP. This does not preclude the additional use of other communication protocols.
4. **For networked chargers**, the charging network provider and chargers must transmit the following protocol data units between the Central Management System and the charger(s) as specified in OCPP version 2.0.1 or a subsequent version of OCPP:
  - a. HeartbeatRequest shall be transmitted to the Central Management System by the charger on a set interval.
  - b. HeartbeatResponse shall be transmitted to the charger by the Central Management System in response to any received HeartbeatRequest.
  - c. StatusNotificationRequest shall be transmitted by the charger to the Central Management System any time the charger or an associated charging port's operative status changes.
  - d. BootNotificationRequest shall be transmitted by the charger to the Central Management System any time the charger is powered on.
  - e. BootNotificationResponse shall be transmitted by the Central Management System to the charger in response to any received BootNotificationRequest.

### The Recipient Shall:

- **For networked chargers**, ensure the charging network provider collects and retains the Remote Monitoring data below from each charging port installed and operated as part of this Agreement.
- **For networked chargers**, ensure the charging network provider automatically transmits the Remote Monitoring data below to the CEC, via API, within 60 minutes of the Remote Monitoring data's generation.
- **For networked chargers**, ensure the charging network provider retains the Remote Monitoring data below for 2 years from the date of each record's generation. Provide *Remote Monitoring records* to the CEC within 10 business days of request.
  1. Provide digital records in a comma separated values (CSV) file unless another file format is approved by the CEC for the request.
  2. Provide a clear and understandable *data dictionary* that describes each data element and any associated units with all digital records.
- **For all chargers**, collect and retain the maintenance records specified below for each charging port installed and operated as part of this agreement for 6 years from the date the charging port begins operation. Provide *maintenance records* to the CEC within 10 business days of request.

### Remote Monitoring Data for Networked Chargers

1. All instances of the following Protocol Data Units (PDUs), specified in OCPP 2.0.1, that are transmitted between the charger and the central system.
  - a. HeartbeatResponse
  - b. StatusNotificationRequest
  - c. BootNotificationRequest
2. The total number of charge attempts for the reporting period.
3. The total number of successful charging sessions for the reporting period.
4. The total number of failed charging sessions for the reporting period.
5. The percentage of successful charging sessions for the reporting period relative to the total number of charge attempts for the reporting period.

### Maintenance Records

1. **For all chargers**, reports of inoperative charging ports or charging port failures resulting in inability to charge, such as a customer complaint, internal diagnostics, or inspection.
2. **For all chargers**, records of any maintenance conducted on charging ports installed and operated as part of the agreement. Records should specify the following:
  - a. Date and time of the maintenance event

- b. Whether maintenance was corrective or preventive in nature
- c. Whether and for how long the charging port was in an inoperative state prior to maintenance.
- d. Whether the charging port was in an operative state following maintenance

**Products:**

- Remote Monitoring Records
- Maintenance Records
- Data Dictionary

**TASK 7 OTHER DATA COLLECTION AND ANALYSIS**

The goal of this task is to collect operational data from the project and to analyze that data for economic and environmental impacts.

**The Recipient shall:**

- For all electric vehicle chargers and charging stations installed on or after January 1, 2024:
  - Comply with recordkeeping and reporting standards as described in CEC’s regulations. These requirements are not applicable to those electric vehicle chargers and charging stations installed at residential real property containing four or fewer dwelling units.
  - Comply with all industry best practices and charger technology capabilities that are demonstrated to increase reliability, as described in CEC’s regulations.
  - Without limitation to other requirements in this Agreement, Recipient shall comply with any other regulatory requirements, including but not limited to uptime requirements and operation and maintenance requirements. Such regulatory requirements may, but will not necessarily, be enacted after execution of this Agreement. Once regulations are final, they will apply to work under this Agreement irrespective of when finalized. Any updates to regulations may also be applicable to work under this Agreement.
  - If the Recipient is an electric vehicle service provider or other third-party entity that is not the site host, the electric vehicle service provider or third-party entity shall provide a disclosure to the site host about the site host’s right to designate the service provider or third-party as the entity to report the data on behalf of the site host. The Recipient shall verify receipt by signing the disclosure.
- Collect and provide the following data:

- Number, type, date, and location of chargers or hydrogen refueling stations installed.
- Nameplate capacity of the installed equipment, in kW for chargers and kg/day for hydrogen.
- Number and type of outlets per charger.
- Location type, such as street, parking lot, hotel, restaurant, or multi-unit housing.
- Total cost per charger or refueling station, the subsidy from the CEC per charger or refueling station, federal subsidy per charger or refueling station, utility subsidy per charger or refueling station, and privately funded share per charger or refueling station.
- Collect and provide 12 months of throughput, usage, and operations data from the project including, but not limited to:
  - Number of charging or refueling sessions
  - Average charger or refueling station downtime
  - Peak power delivered (kW)
  - Duration of active charging, hourly
  - Duration of charging session, hourly (e.g., vehicle parked but not actively charging)
  - Average session duration
  - Energy delivered (kWh)
  - Average kWh or kg dispensed
  - Types of vehicles using the charging equipment
  - Applicable price for charging, including but not limited to: electric utility tariff, EVSP service contract, or public charger price.
  - Payment method for public charging
  - Energy delivered back to grid or facility if a bidirectional charging use case (kWh)
  - Maximum capacity of the new fueling system
  - Normal operating hours, up time, downtime, and explanations of variations
  - Gallons of gasoline and/or diesel fuel displaced (with associated mileage information)
  - Expected air emissions reduction, for example:
    - Non-methane hydrocarbons
    - Oxides of nitrogen

- Particulate Matter
- Formaldehyde
- Duty cycle of the current fleet and the expected duty cycle of future vehicle acquisitions
- Identify any current and planned use of renewable energy at the facility.
- Identify the source of the alternative fuel.
- Describe any energy efficiency measures used in the facility that may exceed Title 24 standards in Part 6 of the California Code Regulations.
- Provide data on potential job creation, economic development, and increased state revenue as a result of expected future expansion.
- Provide a quantified estimate of the project's carbon intensity values for life-cycle greenhouse gas emissions.
- Compare any project performance and expectations provided in the proposal to CEC with actual project performance and accomplishments.
- Provide a *Data Collection and Information Analysis Report* that lists and analyzes all the data and information described above.

**Products:**

- Evidence of compliance with all applicable regulatory requirements for recordkeeping and reporting standards, including but not limited to uptime requirements and operation and maintenance requirements.
- Data Collection and Information Analysis Report

**TASK 8 PROJECT FACT SHEET**

The goal of this task is to develop an initial and final project fact sheet that describes the CEC-funded project and the benefits resulting from the project for the public and key decision makers.

**The Recipient shall:**

- Prepare an *Initial Project Fact Sheet* at start of the project that describes the project and the expected benefits. Use the format provided by the CAM.
- Prepare a *Final Project Fact Sheet* at the project's conclusion that describes the project, the actual benefits resulting from the project, and lessons learned from implementing the project. Use the format provided by the CAM.
- Provide at least (6) six *High Quality Digital Photographs* (minimum resolution of 1300x500 pixels in landscape ratio) of pre and post technology installation at the project sites or related project photographs.

**Products:**

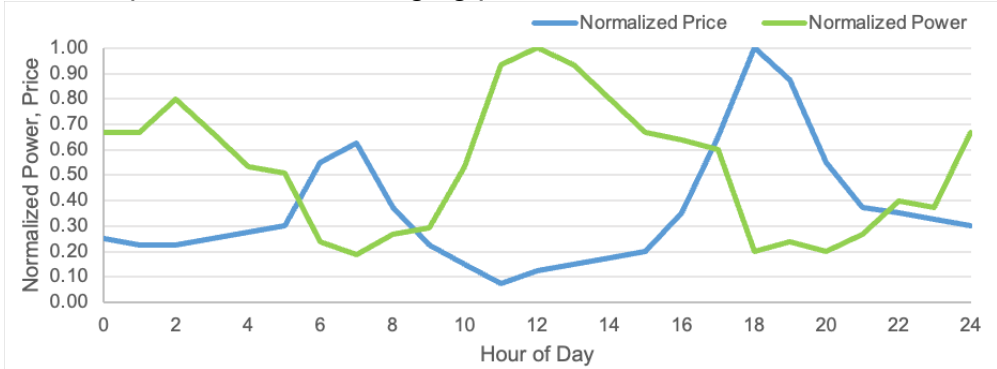

- Initial Project Fact Sheet
- Final Project Fact Sheet
- High Quality Digital Photographs

**Performance Data Collection Reference (Minimum Data Collection and Reporting Requirements)**

Copied from Section II.B.3 of the solicitation manual.

The project must collect data for at least 12 months on all funded deployments. Minimum data collection and reporting requirements are described below:

3-1	<p><b>Sub-hourly Charging Data:</b>                  For all deployments, record charging power in kilowatts (kW), connector status, and real-time electricity price (in \$/kWh) at 15-minute intervals or more frequently. For deployments with bidirectional charging, charging power values must indicate when the vehicle is charging (positive) or discharging (negative). Connector status should indicate, at a minimum: connected and charging, connected and not charging, and not connected. Sub-hourly charging data should be made available upon CEC request <b>and does not need to be regularly reported</b> otherwise.</p>
3-2	<p><b>Monthly Median Normalized 24-Hour Charging Power and Price Profile</b> (hereinafter “normalized profile”):                  Calculate, record, and plot two normalized profiles for each month: One for all deployments with customers enrolled on dynamic rates, and one for all other deployments.</p> <p>To normalize a particular deployment’s charging power profile, scale the peak charge power to a dimensionless 1 and retain 0 kW at 0. To normalize a particular deployment’s electricity price profile, scale the peak electricity price to a dimensionless 1 and retain \$0/kWh at 0.</p> <p>For all normalized profiles, the y-axis shall show normalized charging power (that is, power delivered from the grid to the vehicle) and electricity price ranging from zero to one. (Bidirectional charging or negative electricity prices may require shifting the axis downward to accommodate negative values; adjust as appropriate.) The x-axis shall show a single 24-hour period ranging 0 to 24. An example plot is shown below.</p> <p>Follow the below order of operations to calculate the normalized profiles:</p> <ol style="list-style-type: none"> <li>1. For each deployment with a customer on a dynamic rate, calculate the median 24-hour charging power and electricity price profiles for the entire</li> </ol>

	<p>month using data from 3-1 (sub-hourly charging data). For this step, the y-axis of the plots should show real values in kW and \$/kWh.</p> <ol style="list-style-type: none"> <li>2. Normalize the profiles calculated in the prior step by scaling the monthly peak charge power and peak electricity price to a dimensionless 1.</li> <li>3. Using the profiles calculated in the prior step (one for each customer on a dynamic rate), calculate the median normalized 24-hour charging power and electricity price profiles across all dynamic rate customers. Record, plot, and report this profile to CEC each month during the monthly project call.</li> <li>4. Repeat the above steps for the remaining deployments (with customers not enrolled on a dynamic rate).</li> </ol> <p>An example normalized charging profile is shown below:</p>  <p>This data reporting requirement will yield <b>two normalized profiles per month</b> (one for dynamic rate customers, one for all remaining customers), totaling at least 24 normalized charging profiles during the project term. Normalized profiles shall be reported to CEC during monthly project updates.</p>
<p>3-3</p>	<p><b>Average Electricity Price By Month:</b>          For all deployments, calculate the average price (\$/kWh) of electricity used for charging that month. Any fixed monthly infrastructure charges, adders, or other fees <i>not</i> billed on a volumetric basis (by kWh) shall be noted but <u>excluded</u> from this reporting value. Calculating this value may require using data from 3-1 above.</p> <p>This data reporting requirement will yield one \$/kWh value per month for each deployment and shall be reported to CEC during monthly project updates in an aggregated spreadsheet.</p>
<p>3-4</p>	<p><b>Otherwise-Applicable Average Electricity Price By Month:</b>          For all deployments with a customer enrolled on a dynamic rate, calculate the average price (\$/kWh) of electricity for charging that would have been realized that month on an otherwise-applicable electricity rate. Projects shall select an otherwise-applicable electricity rate that can be reasonably viewed as the default time of use rate for a similar customer in the same utility territory. The goal of this reporting requirement is to determine whether customers are realizing additional savings on their dynamic rate. This data collection</p>

	<p><b>requirement does not apply to deployments with customers enrolled on non-dynamic rates.</b></p> <p>This data reporting requirement will yield one \$/kWh value per month for each dynamic rate deployment and shall be reported to CEC during monthly project updates in the aggregated spreadsheet.</p>
<p>3-5</p>	<p><b>Customer Deployment Log:</b> Record the below information for each deployment as the product is deployed to individual customers. Maintain a single spreadsheet for all customer deployments and add to the spreadsheet as the product is deployed to additional customers. A CEC template is available, and grant recipients may use their own reporting template if preferred.</p> <ol style="list-style-type: none"> <li>1. Date of deployment</li> <li>2. Address of deployment</li> <li>3. Site type (single-family home, multi-family home, restaurant, and so on)</li> <li>4. Whether site is in a disadvantaged or low-income community (or both) based on the <a href="#">California Climate Investments Priority Populations 2022 CES 4.0 map</a>.</li> <li>5. Electric utility provider and enrolled electricity rate</li> <li>6. Whether the enrolled electricity rate is a dynamic rate</li> <li>7. Whether the deployment is enrolled in the SCE Dynamic Rates pilot</li> <li>8. Deployment type (for example, new EVSE, existing EVSE, vehicle telematics connection, and so on)</li> <li>9. Associated manufacturer and model number of the deployment</li> <li>10. Number of deployments at the site/address</li> <li>11. If deploying new EVSE, record:             <ol style="list-style-type: none"> <li>a. Number of EVSE installed at deployment site</li> <li>b. Connector type(s)</li> <li>c. Nameplate charging power (for bidirectional EVSE, also note nameplate discharge power)</li> <li>d. EVITP Certification Number(s)</li> </ol> <p style="text-align: center;"><i>Items e-i may not apply depending on the funding source used. CEC will provide clarification during agreement development.</i></p> <ol style="list-style-type: none"> <li>e. Total cost</li> <li>f. Total subsidy from the CEC</li> <li>g. Total federal subsidy</li> <li>h. Total utility subsidy</li> <li>i. Total privately funded share of cost</li> </ol> </li> </ol> <p>The Customer Deployment Log shall be regularly maintained and reported to CEC during monthly project updates.</p>
<p>3-6</p>	<p><b>Other Applicable Recordkeeping and Reporting:</b> In addition to the other requirements set forth in this application manual and the law, electric vehicle chargers and charging stations installed on or after January</p>

<p>1, 2024, must comply with recordkeeping and reporting standards which CEC is currently in the process of developing. As background, <a href="#">AB 2061</a> and Cal. Pub. Resources Code sect. 25231.5 require the CEC, in consultation with the CPUC, to develop recordkeeping and reporting standards for EV chargers and charging stations. CEC is working to develop regulations in compliance with AB 2061. Other requirements, including but not limited to uptime and operation and maintenance requirements, may also be adopted by regulation. Once these regulations are finalized, chargers which are installed on or after January 1, 2024, including chargers installed under agreements resulting from this solicitation, will need to comply with the new regulations. Applicants to this solicitation must be prepared to comply with any new or updated regulations, even if the regulations are not in existence at the time of application to this solicitation.</p>
