SAMPLE FORM – NOT VALID FOR SUBMISSION TO BUILDING DEPARTMENTS

CERTIFICATE OF INSTALLATION

Note: This table completed by ECC Registry.

Project Name:	Enforcement Agency:
Dwelling Address:	Permit Number:
City and Zip Code:	Permit Application Date:

A. Design Dwelling Unit Water Heating Systems Information (other than HPWH)

This table reports features of the water heating system(s) other than HPWH systems specified on the registered LMCC compliance document for this project.

01	02	03	04	05	06	07	08	09	10
Dwelling Unit Name	Water Heating System ID or Name	Water Heating System Type	Water Heater Type	# of Like (or Identical) Water Heaters in System	Fuel Type	Rated Input Type	Rated Input Value	Dwelling Unit DHW System Distribution Type	Compact Distrib.

A2. Design Dwelling Unit HPWH System Information

This table reports the **HPWH** water heating system(s) that were specified on the registered LMCC compliance document for this project.

01	02	03	04	05	06	07	08	09	10
			# of Like (or						
	Water	Modeled	Identical)		V	Dwelling Unit		Simulated	
	Heating	Equipment	Water		Exterior Tank	DHW System		Equipment	
Dwelling	System ID	Make and	Heaters in	Tank	Insulation R-	Distribution	Compact	Make and	JA13
Unit Name	or Name	Model	System	Location	value	Туре	Distribution	Model	Compliant

B. Installed Dwelling Unit Water Heating Systems Information

This table reports features of the water heating system other than **HPWH** systems installed in this project.

01	02	03	04	05	06	07	08	09	10

SAMPLE FORM – NOT VALID FOR SUBMISSION TO BUILDING DEPARTMENTS

F. Mandatory Measures for Single Dwelling Systems

The responsible person's signature on this compliance document affirms that all applicable requirements in this table have been met.

tiiis tu	ble have been met.
01	Equipment shall meet the applicable requirements of the Appliance Efficiency Regulations (Section 110.3(b)1).
02	Unfired storage tanks are insulated with an external R-3.5 or combination of R-16 internal and external Insulation. (Section 110.3(c)3).
	Domestic hot water piping insulation requirements (Section 150(J)):
	All domestic hot water piping shall be insulated as specified in Section 609.12 of the California Plumbing Code. Insulation buried
	below grade must be installed in a waterproof and non-crushable casing or sleeve.
	Pipe insulation shall fit tightly and all elbows and tees shall be fully insulated.
03	Piping that penetrates framing members shall not be required to have pipe insulation for the distance of the framing penetration.
03	Piping that penetrates metal framing shall use grommets, plugs, wrapping or other insulating material to assure that no contact is
	made with the metal framing. Insulation shall butt securely against all framing members.
	Piping surrounded with a minimum of 1 inch of wall insulation, 2 inches of crawlspace insulation, or 4 inches of attic insulation shall
	not be required to have pipe insulation.
	Insulation is not required on the cold water line when it is used as the return.
	a. A designated space at least 2.5 feet by 2.5 feet and 7 feet tall within 3 feet from the water heater
	• A dedicated 125V, 20A electrical receptacle connected to the electric panel with a 120/240V 3 conductor, branch circuit rated
	at 30 amps minimum, within 3 feet from the water heater and is accessible with no obstructions.
	The conductor shall be labeled with the word "Spare" on both ends; and A recovered single note given the property to the given the property to the branch given the bold "Future 240V use".
	 A reserved single pole circuit breaker space next to the circuit breaker next to the branch circuit labeled "Future 240V use" shall be provided.
	 A condensate drain no more than 2 inches higher than the base of the water heater, and allows for natural draining without
	pump assistance.
	pump assistance.
	b. A designated space at least 2.5 feet by 2.5 feet and 7 feet tall more than 3 feet from the water heater
04	 A dedicated 240 volt branch circuit shall be installed within 3 feet from the designated space. The branch circuit shall be rated
04	at 30 amps minimum. The blank cover shall be identified as "240V ready"; and
	The main electrical service panel shall have a reserved space to allow for the installation of a double pole circuit breaker for a
	future HPWH installation. The reserved space shall be permanently marked as "For Future 240V use"; and
	 Either a dedicated cold water supply, or the cold water supply shall pass through the designated HPWH location just before
	reaching the gas or propane water heater; and
	The hot water supply pipe coming out of the gas or propane water heater shall be routed first through the designated HPWH
	location before serving any fixtures; and
	The hot and cold water piping at the designated HPWH location shall be exposed and readily accessible for future installation of a LINAUL and
	of a HPWH; and A condensate drain no more than 2 inches higher than the base of the installed water heater, and allows natural draining
	without pump assistance.
	Domestic hot water piping insulation requirements: See the exceptions to Section 160.4(e)
	All piping for multifamily domestic hot water systems shall be insulated and meet the applicable requirements below:
	1. General Requirements:
	a. The first 8 feet of inlet cold water piping from the storage tanks, including piping between a storage tank and a heat trap shall
	be insulated.
	b. Insulation on the piping and domestic hot water system appurtenances shall be continuous.
	c. Pipe supports, hangers, and pipe clamps shall be attached on the outside of rigid pipe insulation to prevent thermal bridges.
	d. All pipe insulation seams shall be sealed.
	e. Insulation for pipe elbows shall be mitered, preformed, or site fabricated with PVC covers.
05	f. Insulation for tees shall be notched, preformed, or site fabricated with PVC covers.
	g. Extended stem isolation valves shall be installed.h. All plumbing appurtenances on hot water piping from a heating source to heating plant, at the heating plant, and distribution
	supply and return piping shall be insulated to meet the following requirements:
	i. Where the outer diameter of the appurtenance is less than the outer diameter of the insulated pipe that it is attached to,
	the appurtenance shall be insulated flush with the insulation surrounding the pipe.
	ii. Where the outer diameter of the appurtenance is greater than the outer diameter of the insulated pipe that it is attached
	to, the appurtenance shall be insulated with a minimum thickness of 1 inch.
	iii. The insulation shall be removable and re-installable to ensure maintenance or replacement services can be completed.
	iv. Valves shall be fully functional without impediment from the insulation.

CALIFORNIA ENERGY COMMISSION

CEC-LMCI-PLB-02-E

SAMPLE FORM – NOT VALID FOR SUBMISSION TO BUILDING DEPARTMENTS

- **2. Insulation Thickness:** All piping for multifamily domestic hot water systems shall meet the insulation thickness requirements specified in of Table 160.4-A.
 - a. For insulation conductivity in the range shown in Table 160.4-A for the applicable fluid temperature range, the insulation shall have the applicable minimum thickness or R-value shown in Table 160.4-A.
 - b. if the insulation conductivity falls outside the range provided in Table 160.4-A applicable fluid temperature range, the insulation shall meet a minimum R-value as indicated in Table 160.4-A. Or, it can have a thickness determined using Equation 160.4-A.
 - c. Insulation conductivity shall be determined in accordance with ASTM C335 at the mean temperature listed in Table 160.4-A, and shall be rounded to the nearest 1/100 Btu-inch per hour per square foot per °F.
- **3. Insulation Protection:** Pipe Insulation shall be protected from damage due to sunlight, moisture, equipment maintenance and wind. Protection shall, at minimum, include the following:
 - a. Pipe and appurtenance insulation exposed to weather shall be protected by a cover suitable for outdoor service. The cover shall be water retardant and provide shielding from solar radiation that can cause degradation of the material. Appurtenance insulation covers shall be removable and able to be reinstalled. Adhesive tape shall not be used to provide this protection.
 - b. Pipe insulation covering chilled water piping and refrigerant suction piping located outside the conditioned space shall include, or be protected by, a Class I or Class II vapor retarder. All penetrations and joints shall be sealed.
 - c. Pipe insulation buried below grade must be installed in a waterproof and noncrushable casing or sleeve.

G. Compact Hot Water Distribution (RA4.4.6)

The responsible person's signature on this compliance document affirms that all applicable requirements in this table have been met.

For dwelling units with multiple systems, enter the master bath distance and kitchen distance to the closest water heater, and enter the average of the furthest fixture to each water heater.

01	02	03	04	05	06	07	08	09
		Master Bath	Kitchen	Furthest Third				
		distance of	distance from	furthest fixture				
		furthest	furthest	to Water Heater				
	Number	fixture to	fixture to	in feet (Avg for			Design	Calculated
Dwelling	of	Water Heater	Water Heater	multiple water	Weighted	Qualification	Compactness	Compactness
Name	Stories	in feet	in feet	heaters)	Distance	Distance	Factor	Factor

H. Central Parallel Piping Requirements (RA4.4.4)

The responsible person's signature on this compliance document affirms that all applicable requirements in this table have been met.

Systems that utilize this distribution type shall comply with these requirements.

01	Each central manifold has 15 feet or less of pipe between manifold and water heater.
02	For manifolds that include valves, the manifold must be readily accessible in accordance with the plumbing code.
03	Hot water distribution system piping from the manifold to the fixtures and appliances must take the most direct path. For instance, piping from a second story manifold cannot supply the first floor.
04	The hot water distribution piping must be separated by at least 2 inches from any other hot water supply piping, and at least 6 inches from any cold water supply piping. Alternatively, the hot water supply piping must be insulated to the thicknesses shown in TABLE 120.3-A-1.

SAMPLE FORM – NOT VALID FOR SUBMISSION TO BUILDING DEPARTMENTS

I. Point of Use Requirements (POU) (RA4.4.5)

The responsible person's signature on this compliance document affirms that all applicable requirements in this table have been met.

Systems that utilize this distribution type shall comply with these requirements

,	that the deline and had not repersional comply with these regardenesses
	All hot water supply pipe run lengths are equal to or less than the maximum values shown below, based on the pipe diameter. If a combination of piping is used in a single run, then one half the allowed length of each size is the maximum installed length. The maximum allowed length of piping for the longest run terminating in:
01	3/8 inch - For only one pipe size - max length allowed is 15 feet For combination pipe sizes the max allowed length of 3/8-inch piping is 7.5 feet, of 1/2 inch piping is 5 feet, and 3/4 inch piping is 2.5 feet.
	1/2 inch - For only one pipe size – max length allowed is 10 feet For combination pipe sizes the allowed length of 1/2-inch piping is 5 feet, and 3/4 inch piping is 2.5 feet.
	3/4 inch - For only one nine size = 5 feet

J. Mandatory Requirements for all Recirculation Systems (RA4.4.7)

The responsible person's signature on this compliance document affirms that all applicable requirements in this table have been met.

Systems that utilize a recirculation system shall comply with these requirements.

01	A check valve located between the recirculation pump and the water heater to prevent unintentional recirculation.
02	Piping must take the most direct path between water heater and fixtures.
03	Insulation is not required on the cold water line when it is used as the return.
04	If more than one loop is installed, each loop shall have its own pump and controls.

K. Recirculation Non-Demand Controls Requirements (RA4.4.8)

The responsible person's signature on this compliance document affirms that all applicable requirements in this table have been met.

Systems that utilize this distribution type shall comply with these requirements.

	The active control shall be either: timer, temperature, or time and temperature. Timers shall be set to less than 24 hours. The
	temperature sensor shall be connected to the piping and to the controls for the pump.

M. Qualification Requirements for Heat Pump Water Heater Demand Management Systems (Appendix JA13)

The responsible person's signature on this compliance document affirms that all applicable requirements in this table have been met.

01	01	A thermostatic mixing valve conforming to ASSE 1017 shall be installed on the hot water supply line following all manufacturer
	01	installation instructions or the water heater shall conform to UL 60730-1, ASSE 1082, or ASSE 1084.

L. Demand Recirculation Manual Control (RA4.4.9)/Sensor Control (RA4.4.10) Requirements

The responsible person's signature on this compliance document affirms that all applicable requirements in this table have been met.

Systems that utilize either of these distribution types shall comply with these requirements.

The system operates "on-demand", meaning that the pump begins to operate shortly before or immediately after hot water draw begins, and stops when the return water temperature reaches a certain threshold value. For Demand Recirculation Manual Control, the pump shall be turned on using a manual switch system. For Demand Recirculation Sensor Control, the pump shall be turned on using a sensor system. The controls shall be located in the kitchen, bathroom, and any hot water fixture location that is at least 20 feet from the water heater. Manual controls may be activated by wired or wireless mechanisms. Each control shall have standby power of 1 Watt or less. Sensor controls may be activated by wired or wireless mechanisms, including buttons, motion sensors, door switches and flow switches. Each control shall have standby power of 1 Watt or less. Pump and control placement shall meet one of the following criteria: • When a dedicated return line has been installed the pump, controls and thermo-sensor are installed at the end of the supply portion of the recirculation loop; or • The pump and controls are installed on the dedicated return line near the water heater and the thermo-sensor is installed in an accessible location as close to the end of the supply portion of the recirculation loop as possible; or • When the cold water line is used as the return, the pump, demand controls and thermo-sensor shall be installed in an accessible location at the end of supply portion of the hot water distribution line (typically under a sink). After the pump has been activated, the controls shall allow the pump to operate until the water temperature at the thermo-sensor rises to one of the following values: • Not more than 10°F (5.6°C) above the initial temperature of the water in the pipe; or • Not more than 102°F (38.9°C). Or Controls shall limit operation to no more than 5 minutes following activation.				
Manual controls may be activated by wired or wireless mechanisms. Each control shall have standby power of 1 Watt or less. Sensor controls may be activated by wired or wireless mechanisms, including buttons, motion sensors, door switches and flow switches. Each control shall have standby power of 1 Watt or less. Pump and control placement shall meet one of the following criteria: • When a dedicated return line has been installed the pump, controls and thermo-sensor are installed at the end of the supply portion of the recirculation loop; or • The pump and controls are installed on the dedicated return line near the water heater and the thermo-sensor is installed in an accessible location as close to the end of the supply portion of the recirculation loop as possible; or • When the cold water line is used as the return, the pump, demand controls and thermo-sensor shall be installed in an accessible location at the end of supply portion of the hot water distribution line (typically under a sink). After the pump has been activated, the controls shall allow the pump to operate until the water temperature at the thermo-sensor rises to one of the following values: • Not more than 10°F (5.6°C) above the initial temperature of the water in the pipe; or • Not more than 10°F (5.6°C).	01	begins, and stops when the return water temperature reaches a certain threshold value. For Demand Recirculation Manual Control, the pump shall be turned on using a manual switch system. For Demand Recirculation Sensor Control, the pump shall be turned on		
Manual controls may be activated by wired or wireless mechanisms. Each control shall have standby power of 1 Watt or less. Sensor controls may be activated by wired or wireless mechanisms, including buttons, motion sensors, door switches and flow switches. Each control shall have standby power of 1 Watt or less. Pump and control placement shall meet one of the following criteria: • When a dedicated return line has been installed the pump, controls and thermo-sensor are installed at the end of the supply portion of the recirculation loop; or • The pump and controls are installed on the dedicated return line near the water heater and the thermo-sensor is installed in an accessible location as close to the end of the supply portion of the recirculation loop as possible; or • When the cold water line is used as the return, the pump, demand controls and thermo-sensor shall be installed in an accessible location at the end of supply portion of the hot water distribution line (typically under a sink). RESPONSIBLE PERSON'S DECLARATION STATEMENT

I certify the following under penalty of perjury, under the laws of the State of California:

- 1. The information provided on this Certificate of Installation is true and correct.
- 2. I am either: a) a responsible person eligible under Division 3 of the Business and Professions Code in the applicable classification to accept responsibility for the system design, construction, or installation of features, materials, components, or manufactured devices for the scope of work identified on this Certificate of Installation, and attest to the declarations in this statement, or b) I am an authorized representative of the responsible person and attest to the declarations in this statement on the responsible person's behalf.
- 3. The constructed or installed features, materials, components or manufactured devices (the installation) identified on this Certificate of Installation conforms to all applicable codes and regulations and the installation conforms to the requirements given on the Certificate of Compliance, plans, and specifications approved by the enforcement agency.
- 4. I understand that a registered copy of this Certificate of Installation shall be posted or made available with the building permit(s) issued for the building, and made available to the enforcement agency for all applicable inspections, and I will take the necessary steps to ensure this requirement is accomplished.
- 5. I understand that a registered copy of this Certificate of Installation is required to be included with the documentation the builder provides to the building owner at occupancy, and I will take the necessary steps to ensure this requirement is accomplished.

CERTIFICATE OF INSTALLATION – USER INSTRUCTIONS	LMCI-PLB-02-E
Individual Dwelling Unit Hot Water System Distribution	(Page 1 of 3)

LMCI-PLB-02-E User Instructions

A. Design Dwelling Unit Water Heating Systems Information

This table reports the water heating system features that were specified on the registered LMCC compliance document for this project. This section is for information/verification purposes only and requires no user input.

A2. Design Dwelling Unit HPWH System Information

This table reports the water heating system features that were specified on the registered LMCC compliance document for this project. This section is for information/verification purposes only and requires no user input.

B. Installed Dwelling Unit Water Heating Systems Information

This table reports the water heating system information that is being installed. Require one line for each installed water heater.

- 1. Dwelling Unit Name Reference information from Table A.
- 2. Water Heating System ID or Name Reference information from Table A.
- 3. Water Heating System Type Reference information from Table A. The different kinds of water heating system type are DHW, or Combined Hydronic.
- 4. Water Heater Type Reference information from Table A. The different kinds of water heaters are Large/Commercial Storage, Small/Consumer Storage, Residential-Duty Commercial Storage, Heat Pump, Boiler, Large/Commercial Instantaneous, Small/Consumer Instantaneous, Residential-Duty Commercial Instantaneous or Indirect.
- 5. # of Like (or Identical) Water Heaters in system Reference information from Table A.
- 6. Fuel Type Reference information from Table A. The different kinds of fuel types are heat pump, electric resistance, natural gas, and propane.
- 7. Rated Input Type Reference information from Table A. For natural gas and propane, the input type is Btu/hr. For heat pump and electric resistance the input type is kW.
- 8. Rated Input Value User input. Numerical value of the rated input. Must be equal to or less than value indicated on the LMCC.
- 9. Dwelling Unit DHW System Distribution Type Reference information from Table A.
- 10. Compact Distribution Reference information from Table A.

B2. Installed Dwelling Unit HPWH System Information

This table reports the water heating system information that is being installed. Require one line for each installed water heater. Not applicable for central systems.

- 1. Dwelling Unit Name Reference information from Table A2.
- 2. Water Heating System ID or Name Reference information from Table A2.
- 3. Modeled Equipment Make and Model User input must be equal to the value indicated on Table A2 as default and allow user to override with an equivalent system based on the simulated equipment in

CERTIFICATE OF INSTALLATION – USER INSTRUCTIONS	LMCI-PLB-02-E
Individual Dwelling Unit Hot Water System Distribution	(Page 2 of 3)

Table A2. A2 as default and allow user to override with an equivalent system based on the simulated equipment in Table A2.04

- 4. # of Like (or Identical) Water Heaters in System Reference information from Table A2.
- 5. Tank Location User input. Must be equal to value indicated in Table A2.
- 6. Exterior Tank Insulation R-value User input. Must be equal to or higher than value indicated in Table A2.
- 7. Dwelling Unit DHW System Distribution Type –Reference information from Table A2.
- 8. Compact Distribution Reference information from Table A2.
- 9. JA13 Compliant Reference information from Table A2.

C. Design Dwelling Unit Water Heating Efficiency Information

This table reports the water heating system features that were specified on the registered LMCC compliance document for this project. This section is for information/verification purposes only and requires no user input.

D. Installed Dwelling Unit Water Heating Efficiency Information

This table reports the water heating system efficiency features installed in this project.

- 1. Water Heating System ID or Name Reference information from Table C.
- 2. Heating Efficiency Type Reference information from Table C. Different efficiency types are: AFUE, UEF and Thermal Efficiency.
- 3. Heating Efficiency Value User input must be equal to or higher efficiency than value indicated on Table C.
- 4. Standby Loss User input. Must be equal to or less than value indicated in Table C. Value may be N/A if LMCC value is N/A.
- 5. Exterior Insulation R-Value User input. Must be equal to or higher than value indicated in Table C. Value may be N/A if LMCC value is N/A.
- 6. Water Heater Storage Volume (gal) User input. Must be equal to the value indicated in Table C. Value may be N/A if water heater type is instantaneous with zero storage.
- 7. Tank location User input. Must be equal to value indicated in Table C.

E. Installed Water Heater Manufacturer Information

This table reports the manufacturer information of the installed water heater(s). Require one line for each installed water heater. Not applicable for central systems.

- 1. Water Heating System ID or Name Reference information from Table B or B2.
- 2. Manufacturer User input. Enter the name of the water heater manufacturer.
- 3. Model Number User input. Enter the model number of the water heater.

F. Mandatory Measures for all Single Dwelling Systems

This table lists the requirements for all DHW systems. Installer must ensure all the requirements on this table are met.

CERTIFICATE OF INSTALLATION – USER INSTRUCTIONS	LMCI-PLB-02-E
Individual Dwelling Unit Hot Water System Distribution	(Page 3 of 3)

G. Compact Hot Water Distribution

If performance compliance is used, this table lists the values used in the performance calculation and require no user input.

If prescriptive compliance is used, fill out this table.

- 1. Dwelling Name. Reference information from Table A2.
- 2. Enter the master bath distance of furthest fixture to water heater in feet. For multiple water heaters, enter the distance to the closest water heater.
- 3. Enter the kitchen distance from furthest fixture to water heater in feet. For multiple water heaters, enter the distance to the closest water heater.
- 4. Enter furthest third fixtures from fixture to water heater in feet. For multiple water heaters, enter the average of the furthest distance of each water heater.
- 5. Weighted Distance Calculated value no user input required.
- 6. Qualification Distance Calculated value no user input required.

H. Central Parallel Piping Requirements

This table only applies to systems indicated as Central **Parallel Piping.** In addition to the mandatory requirements in Table J, the installer must ensure the requirements in this table are met.

I. Point of Use Requirements

This table only applies to systems indicated as **Point of Use**. In addition to the mandatory requirements in Table J, the installer must ensure the requirements in this table are met.

J. Mandatory Requirements for all Recirculation System

The requirements of this table apply to all recirculation systems listed below.

K. Recirculation Non-Demand Controls Requirements

This table only applies to systems indicated as **Recirculation Non-demand Controls.** In addition to the mandatory requirements in Table J and M, the installer must ensure the requirements in this table are met.

L. Demand Recirculation Manual Control/Sensor Control Requirements

This table only applies to systems indicated as **Demand Recirculation Manual Control** or **Demand Recirculation Senor Control**. In addition to the mandatory requirements in Table H and K, the installer must ensure the requirements in this table are met.

M. Qualification Requirements for Heat Pump Water Heater Demand Management Systems (Appendix JA13)

This table only displays if JA13 is identified in the LMCC-PRF.

Documentation Declaration Statements
