

2024 POWER CONTENT LABEL		
The Regents of the University of California		
	Clean Power Program	CA Utility Average
Greenhouse Gas Emissions Intensity (lbs of CO ₂ e emitted per megawatt hour)	671	359
Electricity Sources		
RPS Eligible Renewables	42%	45%
Biomass & Biogas	0%	2%
Geothermal	0%	5%
Eligible Hydroelectric	0%	2%
Solar	15%	23%
Wind	27%	14%
Large Hydroelectric	3%	10%
Nuclear	1%	11%
Emerging Technologies	0%	0%
Other	0%	0%
Natural Gas	0%	10%
Coal & Petroleum	0%	2%
Unspecified Power (primarily fossil fuels)	53%	22%
Total	100%	100%
Retail sales covered by retired unbundled RECs	0%	
<p>■ This label does not reflect compliance with the Renewables Portfolio Standard (RPS), which measures the use of tracking instruments called Renewable Energy Credits (RECs) over the course of multi-year compliance periods. RECs that are purchased separately from the renewable energy ("Unbundled RECs") can be used for RPS compliance, but they do not factor into the power mixes or GHG emissions intensities above.</p> <p>■ GHG intensity figures exclude biogenic CO₂ and emissions from geothermal sources and grandfathered imports of firmed-and-shaped energy. For detailed information about all GHG emissions from California's retail electricity suppliers, visit the CEC webpage at the link below.</p> <p>■ Unspecified power is electricity purchased from a generalized pool on the open market.</p> <p>■ The unbundled RECs retired in association with UC Clean Power Program's portfolio were procured from eligible renewable sources such as solar, wind, hydroelectric, biogas, biomass, or geothermal energy. For additional information on unbundled RECs retired in association with the UC Clean Power Program please reach out via email at UC_ESP@ucop.edu.</p>
