

BEFORE THE
CALIFORNIA CLEAN ENERGY JOBS ACT
CITIZENS OVERSIGHT BOARD

1516 NINTH STREET
ROSENFELD HEARING ROOM - FIRST FLOOR
SACRAMENTO, CALIFORNIA

This meeting of the Citizens Oversight Board will include teleconference participation by one or more Board Members. (Gov. Code section 11123(b) (2).) The teleconference locations, in addition to the address above, are:

UNIVERSITY OF CALIFORNIA, LOS ANGELES
4608 GEOLOGY BUILDING
LOS ANGELES, CA 90095

THURSDAY, FEBRUARY 9, 2017

1:00 P.M.

Reported by
Peter Petty

APPEARANCES

BOARD MEMBERS PRESENT (*Via telephone and/or WebEx)

Kate Gordon, Chair

James (Walkie) Ray, Vice Chair

David Dias, Board Member

Randall Martinez, Board Member

*Chelina Odbert, Board Member

*Arno Harris, Board Member

*Mark Gold, Board Member

EX OFFICIO MEMBER PRESENT

Robert B. Weisenmiller

CEC STAFF PRESENT

Jack Bastida

Elizabeth Shirakh

ALSO PRESENT:

Hoang Nguyen, Calif Community College Chancellor's Office

Mario Rodriguez Calif Community College Chancellor's Office

Carlos Montoya, Calif Community College Chancellor's Office

Bill McNamara, California Conservation Corps

Sarah White, California Workforce Development

PUBLIC COMMENT:

Rick Brown, Terra Verde Renewable Partners

I N D E X

PAGE

THE BOARD WILL CONSIDER AND MAY TAKE ACTION ON THE FOLLOWING ITEMS:

1.	INTRODUCTION AND ROLL CALL OF BOARD MEMBERS TO DETERMINE QUORUM. (Board Chair Kate Gordon)	1
2.	APPROVAL OF MINUTES FROM SEPTEMBER 22ND, 2016 CITIZENS OVERSIGHT BOARD MEETING. (Board Chair Kate Gordon)	2
3.	DISCUSSION AND POSSIBLE VOTE ON A CONFLICT OF INTEREST CODE FOR THE CALIFORNIA CITIZEN OVERSIGHT BOARD. The law requires that every state agency have a conflict of interest code, which identifies all agency officials and employees who make or participate in making governmental decisions. (Staff Member Jack Bastida)	3
4.	PRESENTATION AND POSSIBLE VOTE ON ANNUAL REPORT FROM THE CALIFORNIA ENERGY COMMISSION (Liz Shirakh, California Energy Commission)	9
5.	PRESENTATION AND POSSIBLE VOTE ON ANNUAL REPORT FROM THE CALIFORNIA COMMUNITY COLLEGE CHANCELLOR'S OFFICE. (Carlos Montoya, California Community College Chancellor's Office)	46
6.	PRESENTATION AND POSSIBLE VOTE ON ANNUAL REPORT FROM THE CALIFORNIA CONSERVATION CORPS- ENERGY CORP PROGRAM. (Bill McNamara, California Conservation Corps)	58
7.	PRESENTATION AND POSSIBLE VOTE ON ANNUAL REPORT FROM THE CALIFORNIA WORKFORCE DEVELOPMENT BOARD. (Sarah White, California Workforce Development)	97

8.	PRESENTATION AND POSSIBLE VOTE ON JOBS REPORT FROM THE CALIFORNIA WORKFORCE DEVELOPMENT BOARD. (Sarah White, California Workforce Development)	123
9.	PUBLIC COMMENT.	137
	Adjourn	143
	Reporter certificate	144
	Transcriber certificate	145

P R O C E E D I N G S

FEBRUARY 9, 2017 1:00 P.M.

CHAIR GORDON: Okay, hi everybody.
Welcome. I feel very far away from you all.
Welcome to the California Clean Energy Jobs Act/
Prop 39 Citizens Oversight Board meeting. Let us
call the meeting to order.

Jack, do you want to call the roll?

MR. BASTIDA: Of course.

First off, can everyone hear me online?

BOARD MEMBER HARRIS: Yes.

MR. BASTIDA: Okay.

BOARD MEMBER ODBERT: Yes.

MR. BASTIDA: Just wanted to check and make
sure of that.

Okay, call roll now.

Board Member Gordon?

CHAIR GORDON: Present.

MR. BASTIDA: Board Member Ray?

VICE CHAIR RAY: Here.

MR. BASTIDA: Board Member Kremen? No.

Board Member Harris?

BOARD MEMBER HARRIS: Yes.

MR. BASTIDA: Board Member Odbert?

BOARD MEMBER ODBERT: Here.

1 MR. BASTIDA: Board Member Martinez?
2 BOARD MEMBER MARTINEZ: Here.
3 MR. BASTIDA: Board Member Dias?
4 BOARD MEMBER DIAS: Here.
5 MR. BASTIDA: Board Member Gold?
6 BOARD MEMBER GOLD: Here.
7 MR. BASTIDA: We have a quorum established.
8 CHAIR GORDON: And welcome to the newest
9 Board Member Mark Gold, who I have not yet met in
10 person, but we're glad to have you here on the phone
11 and thank you for joining us for the oversight
12 board, Mark.
13 BOARD MEMBER GOLD: Thank you. I'm sorry I
14 couldn't make up. I'll make it up for the next one
15 for sure.
16 CHAIR GORDON: Great. We have an item to
17 approve the minutes from the last meeting, which was
18 September, long time ago, September 22nd. Has
19 everyone looked at the minutes? Do we have a motion
20 to approve?
21 BOARD MEMBER DIAS: I motion to approve the
22 minutes.
23 BOARD MEMBER MARTINEZ: Second.
24 CHAIR GORDON: Great. All in favor?
25 IN UNISON: Aye.

1 CHAIR GORDON: Anyone opposed? Sorry, aye.
2 Anyone opposed? Any abstentions?

3 Great, the minutes are approved
4 unanimously.

5 I am going to turn to Staff Member Jack
6 Bastida to talk to us about something we talked
7 about last time and we tabled and held over to this
8 meeting, which is the Conflict of Interest Code for
9 the Board.

10 Jack, do you want to take that?

11 MR. BASTIDA: Yeah. Is it okay if I speak
12 over here or you want me to...

13 CHAIR GORDON: Yes, it is.

14 MR. BASTIDA: All right. It'll be easier,
15 to control everything.

16 So as you probably know, each state agency
17 has to have a Conflict of Interest Code established
18 with the FPPC. This code is part of the Political
19 Reform Act and it's kind of in service to make sure
20 that all the different designated positions are
21 spelled out for Form 700.

22 Last meeting we were looking at the
23 Conflict of Interest Code and it was expressed by
24 Board Member Kremen to look at it a little bit in
25 more detail, see if we can limit some of the

1 categories that must be disclosed by the Board
2 Members, so we looked at that.

3 The Board Members are, if you look at your
4 Page 2 here, the Board Members are designated in
5 Position 1 Disclosure Category. What this means is
6 that they need to disclose any investment or
7 business positions in a business entity and source
8 of income, which includes receipt of loans, gifts
9 and travel payments if the business entity or source
10 is an energy provider or energy related entity, or
11 it has applied to receive funds from the Clean
12 Energy Fund. They also need to disclose if they
13 have any real property located within the boundaries
14 or not more than two miles outside the boundaries of
15 a local education agency school campus. This
16 includes public school districts, individual charter
17 schools and county offices of education. So that's
18 the first position which deals with Board Members.

19 Second position deals with our assistant
20 general counsel and myself, the associated
21 governmental program analyst. We have to disclose
22 any investments, business position or business
23 entities or sources of income from any gifts, loans
24 or travel payments if the entity or source is the
25 type that provides leased facilities, products,

1 equipment, vehicles, machinery or services,
2 including training and consulting services of the
3 type utilized by the Board.

4 So these disclosure categories, the first
5 one is a little bit more narrow than what is usually
6 a disclosure category for the FPPC. Last year for
7 your Form 700 you probably had to disclose any and
8 all businesses you had over a certain amount. This
9 is a little bit more narrow of a disclosure. We
10 went through with FPPC lawyers to make sure that
11 this is something that is in line with your duties
12 as Board Members for this Board.

13 CHAIR GORDON: Jack, members here and then
14 I'll turn to the phone, questions about this or
15 discussion? This is narrower than the last version
16 we saw, so thank you, Jack, for going back and
17 working on that. Do we have concerns, questions?
18 We are going to vote on this today, so Jack?

19 MR. BASTIDA: Yes, just as a side comment
20 to have to do with the Form 700s. So I just got
21 trained by the FPPC as a Form 700 person, I guess,
22 and so I can take all your forms. I know there's a
23 new e-disclosure that you can do online, do the form
24 online, that some members might be interested in.
25 You should have gotten an email from the FPPC with

1 your login information last month. But if you want
2 to do it the old fashioned way just mail me your
3 Form 700 and I will personally deliver it to the
4 building and make a copy for our records as well.

5 CHAIR GORDON: Jack, can you remind us of
6 the due date?

7 MR. BASTIDA: It's April 22nd -- April 3rd,
8 okay, April 3rd. Maybe I'm thinking about my
9 anniversary. But yeah, that's the date right there.

10 CHAIR GORDON: Questions, Board Members,
11 comments, questions, concerns?

12 VICE CHAIR RAY: I don't recall receiving
13 email from you. Perhaps you could resend that.

14 MR. BASTIDA: That came, yeah, it should
15 have come directly from FPPC so it might have gotten
16 filtered out, but I can definitely forward you the
17 mail. I've already received your Form 700, Board
18 Member Ray, so you're good.

19 VICE CHAIR RAY: Okay, I filled it out.

20 CHAIR GORDON: Wow. You did it without
21 getting the email, that's impressive.

22 On the phone since there aren't burning
23 questions in the room, on the phone are there
24 questions or concerns. We are going to vote on this
25 code so questions, concerns before the vote?

1 BOARD MEMBER GOLD: No.

2 BOARD MEMBER ODBERT: No question.

3 BOARD MEMBER HARRIS: None.

4 CHAIR GORDON: David, do you have a
5 question?

6 BOARD MEMBER DIAS: Yeah, just really
7 quick. It says not more than two miles outside the
8 boundaries of a local educational agency or
9 whatever. Is that I'm assuming air miles, correct?

10 MR. BASTIDA: That's correct, yes.

11 BOARD MEMBER DIAS: Okay. Thank you.

12 CHAIR GORDON: No questions on the phone,
13 it sounded like. Do we have a motion to approve the
14 code?

15 BOARD MEMBER MARTINEZ: So moved.

16 BOARD MEMBER DIAS: Second.

17 CHAIR GORDON: Great. Do we have -- can
18 you just call roll on this, actually?

19 MR. BASTIDA: Of course, yeah.
20 Board Member Gordon?

21 CHAIR GORDON: Aye.

22 MR. BASTIDA: Board Member Ray?

23 VICE CHAIR RAY: Yes.

24 MR. BASTIDA: Board Member Harris?

25 BOARD MEMBER HARRIS: Aye.

1 MR. BASTIDA: Board Member Odbert?
2 BOARD MEMBER ODBERT: Aye.
3 MR. BASTIDA: Board Member Martinez?
4 BOARD MEMBER MARTINEZ: Yes.
5 MR. BASTIDA: Board Member Dias?
6 BOARD MEMBER DIAS: Yes.
7 MR. BASTIDA: Board Member Gold?
8 BOARD MEMBER GOLD: Aye.
9 CHAIR GORDON: Great, the motion is
10 approved. Thank you, everybody, for getting through
11 that quickly. And again, thank you to staff for
12 getting us back a clearer and narrower code.
13 We are moving to the meat of the agenda.
14 Just as context for everyone in the room, I'm sure
15 you all know this, but as you know, this Board is
16 required to give a report every year to the
17 Legislature on the status of the funds and the
18 projects under the Clean Energy Jobs Act. As a part
19 of that we request from each of the participating
20 agencies a report to us on the progress and the
21 status and today is our opportunity to hear from, I
22 think all -- most -- all of those boards and
23 programs about status, and they will be giving
24 presentations.
25 We do ask that people try to limit their

1 presentations to 15 minutes, I think that's what
2 Jack asked you to do. I know that there will be a
3 lot of questions and I'm sure that some of you will
4 have a hard time with that but please try not to go
5 too far over 15 minutes.

6 So we are going to start with the big chunk
7 of money.

8 And I want to say thank you to Chair
9 Weisenmiller for being here, too, actually, from the
10 California Energy Commission.

11 So Liz, we are going to hear from you,
12 thank you so much.

13 MS. SHIRAKH: So my name's Liz Shirakh.
14 I'm with the California Energy Commission, the Local
15 Assistance and Financing Office of the Efficiency
16 Division, and I'm the Program Lead for the Prop 39
17 K-12 Program, and for your consideration and
18 possible approval today on behalf of the Energy
19 Commission and Prop 39 staff, I'll be presenting to
20 you our second report to the Citizens Oversight
21 Board.

22 Next slide.

23 For your information today I will present a
24 brief overview of the Energy Commission's report and
25 my presentation will begin with the report overview

1 and moving into summary highlights of the three
2 programs, the Prop 39 K-12 Program, the Energy
3 Conservation Assistance Act Education subaccount,
4 and our Bright School Program, and then wrapping up
5 the presentation with time for questions and
6 answers.

7 I'd first like to begin with the report
8 overview.

9 Energy Commission staff along with other
10 reporting agencies worked with COB staff member Jack
11 Bastida last summary to review lessons learned from
12 the first cycle. As a result, a more standardized
13 report form outline was developed to provide a
14 format consistency as well as a reporting schedule.

15 The Energy Commission administers three
16 components of the California Clean Energy Jobs Act,
17 a grant program called the Prop 39 Program, a
18 revolving loan program, the Energy Conservation
19 Assistance Act education subaccount program also
20 known as ECAA-Ed, and a technical assistance program
21 called the Bright School Program. All three
22 programs receive funds from the Clean Energy Jobs
23 creation fund created by Prop 39, and this report
24 provides progress on all three programs.

25 This is the Energy Commission's second

1 progress report to the Citizen's Oversight Board.
2 The report summarizes outcomes from the start of the
3 Prop 39 K-12 Program in December 19, 2013 through
4 the end of fiscal year 2015/16, June 30, 2016. Our
5 first progress report to the Citizens Oversight
6 Board covered December 19, 2013 through December 31,
7 2015, so it's important to note that the second
8 report just covers an additional six months from our
9 first report.

10 Before discussing the program status it's
11 helpful to review the appropriations for the
12 reporting period. This slide summarizes the
13 2013/14, 14/15, and 15/16 Clean Energy Job Fund
14 appropriations for the Energy Commission's programs.

15 The K-12 Program has total appropriations
16 of nearly a billion dollars at \$973 million.

17 The ECAA-Ed Program has total
18 appropriations of \$56 million for 2013/14 and for
19 14/15 fiscal years. The ECAA-Ed Program did not
20 receive funding in fiscal years 15/16.

21 The first program I'd like to discuss is
22 the Prop 39 K-12 Program that provides grant funding
23 to install eligible energy efficiency and clean
24 energy generation measures at K-12 schools. The
25 Energy Commission is primarily responsible for

1 administering the Prop 39 K-12 Program, collecting,
2 reviewing and approving energy expenditure plan
3 applications.

4 The Energy Commission approved the first
5 energy expenditure plans known as EEPs in April
6 2014, and the program has grown rapidly since. As
7 of June 30, 2016, the Energy Commission approved
8 \$673 million for eligible energy project funding,
9 and that's the blue slice of the pie you see up
10 there. In addition, \$154 million has been approved
11 for planning; that's the pink slice.

12 Local educational agencies, or LEAs,
13 request planning funds directly from the California
14 Department of Education, so out of the total
15 allocation of \$973 million -- you can see that box
16 at the top right of the slide -- nearly \$827 million
17 in Prop 39 funding has been approved this reporting
18 period.

19 This next slide summarizes the reported
20 cumulative spending as of June 30, 2016. for all
21 approved EEPs, LEAs must provide an annual progress
22 report each fiscal year. Once an EEP is completed,
23 LEAs provide a final project completion report 12-15
24 months after project completion date. This report
25 includes final project cost, estimated energy

1 savings, and 12 months of post-installation energy
2 consumption data.

3 This slide breaks down the amount reported
4 and spent in four categories. At the top of the
5 slide you'll see 52 submitted final project
6 completion reports, and these are the reports that
7 require the 12 months of post-installation energy
8 usage data. These 52 LEAs reported spending \$27
9 million of Prop 39 funding.

10 Going down to the next line, the white
11 line, that's 183 EEPs were completed, but they're
12 still collecting their 12 months of post-
13 installation data, but they did report in their
14 annual reports that they have spent \$104 million.

15 Going down the table, 733 projects are
16 still in construction and reported \$151 million
17 spent.

18 And finally, at the bottom we have energy
19 planning funds. They reported \$36.5 million
20 reported as being spent.

21 So in total \$318 million has been reported
22 spent in LEAs throughout California, and that's 38
23 percent of that \$827 million that's been approved
24 this reporting period.

25 BOARD MEMBER HARRIS: Hi Liz, one question

1 on that, if I can?

2 MS. SHIRAKH: Sure.

3 BOARD MEMBER HARRIS: This is Arno Harris.
4 Just looking at the line for EEPs still in
5 construction, the ratio of dollars to number of
6 projects is sort of different than the others. Is
7 that the amount of spending to date on those
8 projects, that's not the total amount eligible or
9 anticipated for those projects; is that correct?

10 MS. SHIRAKH: That's correct, that's what
11 was reported spent to date. And again, these were
12 as of June 30, 2016. Does that answer your
13 question?

14 BOARD MEMBER HARRIS: Got it, thank you.

15 MS. SHIRAKH: Yes.

16 So I just wanted to point out that the
17 Energy Commission did receive 99 percent of the
18 reports due, and I wanted to acknowledge and thank
19 both the Energy Commission and the LEAs for this
20 high response rate, because without these annual
21 reports and these final project completion reports
22 we wouldn't have data for this report.

23 Moving to the next slide.

24 This slide summarizes the totals for both
25 the Prop 39 amounts spent and the amount approved

1 for this reporting period. The amount spent has
2 nearly tripled in the last six months from \$109
3 million reported in December 2015 to \$318 million
4 now reported in June 2016, so this is a very
5 positive trend.

6 Next, I'd like to discuss the types of
7 energy measures funded.

8 Each approved EEP can represent multiple
9 eligible energy efficiency and clean energy measures
10 at multiple school sites within an LEA. Specific
11 types of eligible energy measures include lighting,
12 HVAC, controls for lighting and HVAC, and other
13 energy measures such as pumps, motors, drives, plug
14 loads, building insulation which is like building
15 envelope measures, domestic hot water, kitchen
16 equipment, pool equipment, and clean energy
17 generation or solar projects. In total there are
18 about 40 eligible energy measures that are available
19 in an EEP application.

20 So looking at the breakdown, this table
21 summarizes the types of energy measures we've
22 approved and the associated project costs with those
23 categories.

24 So starting at the top, lighting represents
25 about 50 percent of the approved energy measures.

1 Moving down, about 22 percent for controls, then
2 HVAC at 15 percent. And the other categories that I
3 mentioned in the previous slide fall under the
4 category of other energy efficiency measures, and
5 that's at 12 percent.

6 Solar projects are about 2 percent but
7 what's interesting is if you look toward the right-
8 hand column that shows the total project costs,
9 solar projects actually account for about 12 percent
10 of the total funding approved. And likewise, when
11 you're looking at HVAC, that is actually about
12 almost 40 percent of our total funding. That's
13 because these projects are more expensive and they
14 just have higher project costs.

15 CHAIR GORDON: Liz, have you seen any self-
16 generation projects that are not solar?

17 MS. SHIRAKH: I don't believe so.

18 BOARD MEMBER HARRIS: Quick question. This
19 again is Arno Harris.

20 I'm just curious on the HVAC. I know that
21 we made a recommendation and I think CEC followed up
22 on in our report from last year. Do these numbers
23 reflect already the changes in the return ratios
24 that were made in that -- after that report, or is
25 this the bought-down portion of the capital cost of

1 HVAC retrofits that schools are submitting to be
2 covered by the Prop 39 Program?

3 MS. SHIRAKH: If I'm understanding your
4 question, I know the Citizens Oversight Board did
5 make recommendations last cycle to look at HVAC
6 because some LEAs were concerned that it was hard to
7 make the savings to investment ratio.

8 The Energy Commission did respond to that
9 recommendation and we made changes to the guidelines
10 that affected the savings to investment ratio.
11 Specifically, getting into details of that, we
12 changed the maintenance savings allowance from 2
13 percent to 3 percent, and that greatly affects HVAC
14 because that's basically you're getting high
15 efficiency HVAC you're going to have less
16 maintenance cost and therefore it was justified to
17 increase that maintenance savings.

18 Those changes were done in July 2016 and
19 again, this reporting period is through June, so
20 those changes would not be reflected in these
21 numbers. Does that answer your question?

22 BOARD MEMBER HARRIS: Got it. Yeah, so
23 this is under the original program rules. Yes,
24 that's very helpful, thank you.

25 MS. SHIRAKH: Yes.

1 VICE CHAIR RAY: I have a question as well.
2 My understanding is that the lighting and
3 the controls are fairly easy to accomplish and in
4 fact very possibly most schools now have pretty much
5 exhausted their savings by doing those two things.

6 Are we going to be able to meet our return
7 formulas given that the future may portend a higher
8 percentage of the other mechanisms?

9 MS. SHIRAKH: Well, we are seeing a lot of
10 lighting projects still coming in, and later on my
11 slide presentation you will see that the savings to
12 investment ratio is trending up, which is meaning we
13 are saving beyond \$1 for every dollar we're
14 spending.

15 I don't have a crystal ball but I feel
16 confident that we will continue to get projects that
17 meet the savings to investment ratio.

18 I do say I've been tracking these trends
19 from the very beginning, and it seems like we have
20 been about 50 percent lighting from the beginning of
21 the program, so I'm seeing a consistent trend. I
22 have not seen that go down.

23 VICE CHAIR RAY: Okay.

24 MS. SHIRAKH: Okay. So just wanted to
25 finally on this slide point out we've funded through

1 June 30, 2016 about 13,000 energy efficiency
2 measures and that covered about 3500 school sites.

3 This next section of the Prop 39 K-12
4 presentation is accomplishments, and this is my
5 favorite slide because it's pictures of real photos
6 from Prop 39 K-12 projects, and these are photos
7 that were provided to the Energy Commission in final
8 project completion reports by the schools, and this
9 is just a small representations of the thousands of
10 energy measures being installed throughout
11 California as a result of this program.

12 This slide shows the cumulative summary of
13 the final project completion reports in the two
14 reporting periods. Looking at the right-hand
15 column, that's this reporting period, 52 completed
16 EEPs represent about \$27 million in Prop 30 grant
17 funds. The reported annual savings for these
18 completed projects is 13,000 megawatts and over
19 54,000 therms. The reported energy savings is
20 equivalent to the annual energy consumption of 2,053
21 homes, with total annual energy cost savings of
22 \$2.4 million.

23 It's also important to note the savings to
24 investment ratio, or the SIR, that's the line at the
25 very bottom of this chart. This means for every

1 dollar of Prop 39 dollars invested, \$1.44 will be
2 saved over time. And this is important because the
3 statute requires that a project be cost-effective
4 with total benefits greater than project cost over
5 time.

6 Most of the 52 LEAs with completed energy
7 projects experienced a decrease in energy use
8 intensity, also known as EUI. The EUI is a metric
9 that measures the annual rate of energy use per
10 square foot of building space per year. It can be
11 compared to mileage per gallon used to measure
12 vehicle fuel economy.

13 Overall, the group of 52 LEAs saved 18.9
14 thousand btus per square foot, and this is
15 calculated by comparing the 12 months of energy use
16 data reported on an EEP application to the 12 months
17 of post-installation energy use that's reported on
18 the final project completion report.

19 Now I'd like to briefly touch on a few of
20 the other accomplishment of the program.

21 As promised, the Energy Commission
22 initially launched the program, we continued to
23 identify program improvements, and since the
24 guidelines were originally adopted in December 2013
25 there have been three guideline revisions.

1 In June 2014 the first revision changed
2 charter school eligibility, making it easier for
3 charter schools to participate in the program.

4 In December 2014, just six months later,
5 new revisions modified the savings to investment
6 ratio for all LEAs.

7 And in July 2016, in response to the
8 Citizens Oversight Board report to the Legislature,
9 additional modifications to the sir were made
10 through guideline revisions.

11 Next slide.

12 Another accomplishment I'd like to
13 highlight is the publicly searchable database
14 launched June 30, 2016. This database is simple to
15 use, interactive, and provides quick searches for
16 K-12 projects and community college district program
17 projects. It was designed to provide information on
18 a school site level through several ways for the
19 public to view detailed program information, and
20 this is available on our Prop 39 web page.

21 Another publicly available database is the
22 State of California's Climate Investment Map. Six
23 statewide program topics are showcased, including
24 clean energy programs, and the Prop 39 K-12 Program
25 is represented in purple. With each Prop 39 funded

1 school site, a purple dot, and as you can see,
2 purple dominates the map.

3 On this next slide I've zoomed in to
4 highlight the Los Angeles basin area, and when you
5 click on a purple dot the school site, Foothill High
6 in this example, provides project information
7 including estimated energy savings.

8 This database is also searchable by
9 assembly and senate district or by address or by
10 city. Program information is updated weekly and we
11 also include our ECAA loan projects in this
12 database.

13 As with any program, there are challenges.
14 The biggest challenge is getting all LEAs to submit
15 an energy expenditure plan to receive funding, and
16 the following slides highlight this challenge.

17 The encumbered state of June 30, 2018 is
18 the first challenge. To help illustrate how this
19 date affects the program, I'll discuss a few dates
20 on a program timeline, showing the encumbrance date
21 limits the use of funding in the final 2017/18
22 fiscal year.

23 To best manage the program and ensure LEAs
24 have time to complete all the steps necessary to
25 encumber funds by June 30, 2018, the Energy

1 Commission established an EEP due date of August 1,
2 2017. This is the final date a school can submit an
3 EEP application to the Energy Commission. This
4 deadline effectively shortens the program by 11
5 months.

6 This deadline poses another challenge. The
7 California Department of Education announces the
8 yearly allocations each October with an August 1st
9 deadline. LEAs will now need to submit their
10 applications two months before that October 2017
11 allocation announcement.

12 So to summarize, the necessary final EEP
13 due date of August 1, 2017, shortens the program by
14 11 months, and to complicate the issue further, LEAs
15 won't have their allocations until October, two
16 months after the application due date. This most
17 likely will result in a high volume of EEP
18 amendments due to project change orders, creating
19 additional work for both LEAs and the Energy
20 Commission.

21 BOARD MEMBER HARRIS: Quick question on
22 this one.

23 MS. SHIRAKH: Yes.

24 BOARD MEMBER HARRIS: I believe in our
25 report last year we highlighted this issue, maybe

1 not with this degree of specificity but that the end
2 of the program would create a challenge for
3 deploying funds.

4 Kate, I wonder if maybe we should either
5 take time today or put on the agenda for our next
6 meeting before we issue our report that we may want
7 to underline this point in our report to the
8 Legislature and advocate more strongly for some sort
9 of continuation of the program.

10 And I guess the question I would have is
11 that date's coming up in 2017. Can the Legislature,
12 is it a simple enough fix to merely extend dates
13 that the Legislature could do it in a timeframe that
14 would not result in the deadline hitting LEAs that
15 are applying for the program.

16 CHAIR GORDON: I think we do have one more
17 meeting before we have to submit our report to the
18 Legislature. We're hoping that the next meeting
19 will be the meeting where we really have an in-depth
20 discussion of recommendations, which is the most
21 important section to some extent from this Board in
22 the report where we actually provide our own
23 recommendations based on what we've been hearing.

24 I'm hoping that today as we're listening we
25 will do what you're doing, Arno, and to highlight

1 areas that we should focus on next meeting, and then
2 come to the next meeting with sort of a set and use
3 that as a time to narrow in on what we want to
4 recommend. But let's keep our ears open for this
5 kind of thing because it's clearly an issue. So
6 thank you for outlining it as clearly as you did.

7 Liz.

8 BOARD MEMBER HARRIS: Indeed. Thanks,
9 Kate.

10 CHAIR GORDON: And I'm sorry to your second
11 point. Jack, let's work on as these come up you and
12 I can talk about some of the background kind of
13 information we need to know coming into that next
14 meeting about legislature timeframes, etcetera.

15 MR. BASTIDA: Okay.

16 MS. SHIRAKH: Okay, next slide.

17 Another challenge is the LEA participation,
18 especially charter school participation. The Energy
19 Commission has continually provided extensive
20 program communication, outreach and education
21 through webinars, workshops, conference
22 presentations, press releases, blog posts, listserve
23 announcements, direct phone calls, direct mail, and
24 public meetings. Although these widespread efforts
25 we have facilitated increased LEA participation, yet

1 challenges do remain.

2 The program is more than halfway through
3 the funding period, yet fewer than half of the
4 eligible 2,136 LEAs have requested project funding.
5 If this trend continues there will be funding
6 remaining at the end of the program.

7 As you can see from this slide, charter
8 schools are not participating at the same rate as
9 public school districts. As of June 30, 2016, 838
10 or 74 percent of charter schools were not
11 participating. In comparison, only 37 percent of
12 public school districts had not yet submitted an
13 energy expenditure plan.

14 Next slide.

15 Charter schools have unique characteristics
16 that prevent their full participation. Some of the
17 challenges are that many charters are housed in
18 privately leased facilities. Some charters are
19 virtual charters with no buildings at all. Some
20 charters have very few facilities with potential
21 energy savings projects. And another challenge is
22 that many charter schools do not have the staff
23 resources to pursue facility improvements.

24 Other challenges that apply to all LEAs are
25 that certain areas of California have low electric

1 rates which make it difficult to identify cost-
2 effective energy projects.

3 And finally, small public schools, just
4 like small charter schools, have such small
5 facilities they are not able to identify eligible
6 energy measures that use their entire allocation.

7 BOARD MEMBER GOLD: I have a question
8 before you jump ahead.

9 MS. SHIRAKH: Yes.

10 BOARD MEMBER GOLD: This is Mark Gold, and
11 sorry if you've addressed this in a previous
12 meeting, I apologize being the new kid on the block.

13 But has there been an analysis by the CEC
14 at this point of looking at what the spacial
15 distribution is of who has applied and received
16 funds and whether or not there are some specific
17 areas or gaps geographically that might be, you
18 know, in Title 1 school districts or the like that
19 just haven't gotten their act together for one
20 reason or another to really apply? Or also, in some
21 areas that might have really old schools which would
22 probably be more energy inefficient but just haven't
23 done the work to submit the applications? Have you
24 looked at that sort of from the big picture for the
25 state as a whole?

1 MS. SHIRAKH: Yeah, we've actually done a
2 lot of slicing and dicing of the LEAs that are in
3 the program. We've looked at them by the type of
4 LEA, like what you saw, charter school, public
5 school, office county of education.

6 We also look at them by size and we call
7 that tier, so if you have a school that has average
8 daily attendance of 1 to 100, they get a certain
9 amount of money. And then there's four different
10 tiers in this program, the fourth tier meaning very,
11 very large school districts or large charter
12 schools.

13 We've also looked at the participation and
14 the LEA distribution geographically, looking at
15 counties and as well as looking at LEAs, looking at
16 a disadvantaged community or disadvantages LEA
17 metric, looking at the free and reduced priced meals
18 versus the average daily attendance.

19 So there are just lots of different ways to
20 slice and dice this and we continue to hone in on
21 our outreach and education based on, you know, what
22 we're seeing in these numbers.

23 Another thing we are doing is reaching out
24 to, for charter schools for example, reaching out to
25 the associations, the California Charter School

1 Association and the California Charter School
2 Development Association, getting their support in
3 trying to reach their members.

4 BOARD MEMBER GOLD: Thank you, I greatly
5 appreciate that. In looking at, though -- I can't
6 remember what the exact number is, but if you have,
7 you know, 60 percent of the eligible LEAs that have
8 applied, then 40 percent haven't, and just
9 especially looking at those LEAs that have a history
10 of energy inefficiency that you can look up with the
11 data you have, or higher energy use or they're in
12 disadvantages communities or, you know, have those
13 districts been identified and then you proactively
14 do whatever you can to really try to get them into
15 the system and apply before the money runs out?

16 MS. SHIRAKH: We definitely have, and one
17 of the things I'd like to mention. You have
18 mentioned looking at schools that might have older
19 facilities or haven't done energy efficiency, and
20 one of the challenges in California is that there
21 isn't a school building inventory, so we can't go to
22 California Department of Education and say can we
23 have the list of school buildings that were built
24 prior to, you know, 1920. There is no such list,
25 and so that is a challenge in California.

1 BOARD MEMBER GOLD: You literally would
2 have to go county by county and look at institutions
3 is the only way to really get that done?

4 CHAIR GORDON: Mark, this is Kate, and it
5 is something we've talked about before but it's a
6 really good point to potentially bring up also in
7 our recommendations. There's no inventory of
8 buildings so we don't even know the number of
9 specific buildings that are in the school community
10 in California.

11 We know the number of districts, we know
12 the number of sites, we don't know the number of
13 buildings, we don't know the age, we don't know the
14 maintenance history, we don't know the energy
15 history unless they've applied for the program, so
16 that is an issue that's come up a couple of times in
17 meetings over the last year as a real challenge when
18 it comes to needs based outreach for the program.

19 VICE CHAIR RAY: Have you checked with DSA?

20 CHAIR GORDON: They didn't have it.

21 VICE CHAIR RAY: They don't?

22 CHAIR GORDON: Doesn't exist.

23 BOARD MEMBER GOLD: I was just --

24 CHAIR GORDON: Walkie asked if we checked
25 with the Department of State Architecture, and we've

1 -- this was an issue that came up repeatedly
2 actually during the legislative discussions and the
3 guideline implementation of Prop 39 and there is no
4 inventory.

5 BOARD MEMBER GOLD: Okay. Well, for
6 whatever it's worth and maybe this is for a later
7 discussion, and we've been talking to CEC about this
8 for years.

9 So we have a faculty member here who has
10 been asking for data and receiving data from some of
11 the major IOUs and even DWP here in the L.A. Region,
12 so she's covered most of southern California. It's
13 not the most current of data but from the standpoint
14 of looking at literally parcel by parcel data so you
15 can identify the schools and see what the energy use
16 was over time.

17 And she's also gone to the planning
18 departments etcetera to get the information on the
19 buildings to get building age, so we have a lot of
20 that for southern California, or we have the
21 potential to extract a lot of that, so that just
22 might be something to consider moving forward, just
23 to give you an FYI.

24 CHAIR GORDON: Thank you, Mark.

25 BOARD MEMBER GOLD: Okay, thanks.

1 CHAIR GORDON: And we will talk about this
2 at the next meeting for sure, I'm sure it will be
3 one of the topics that comes up.

4 BOARD MEMBER GOLD: Okay. Thank you.

5 MS. SHIRAKH: Okay. So I'm just about
6 ready to move to our next program.

7 Next slide, please.

8 CHAIR GORDON: And Liz, you get extra time
9 because you have so many programs.

10 MS. SHIRAKH: Thank you.

11 The second program the Energy Commission
12 administers is the Energy Conservation Assistance
13 Act education subaccount, also known as ECAA-Ed.
14 This financing program is a revolving loan program
15 that provides zero percent loans to K-12 LEAs and
16 community college districts for energy efficiency
17 and clean energy generation projects.

18 Next slide.

19 ECAA-Ed received \$28 million in both fiscal
20 years 2013/14 and 2014/15 for a total of \$58
21 million. No funding was allocated in fiscal year
22 2015/16.

23 Also included in this slide is funding from
24 our Bright Schools Program. Public Resource Code
25 authorizes the Energy Commission to set aside 10

1 percent of the job creation fund for school
2 technical assistance to identify Prop 39 energy
3 projects. Therefore, Bright Schools Program
4 received just over \$5.5 million of the \$56 million.

5 Next slide.

6 No, we're on the right slide. I can't see,
7 it's so far away.

8 As of June 30, 2016, 29 ECAA-Ed loans were
9 approved by the California Energy Commission. This
10 represents \$46.4 million.

11 ECAA-Ed loan recipients request loans on a
12 reimbursement basis based on invoices submitted to
13 the Energy Commission. For this reporting period
14 recipients requested and received \$23.9 million in
15 funds. Of the 29 approved loans, 10 have completed
16 projects. One of the 10, and that's the first one
17 on the top of the table, has submitted a final
18 project completion report. The remaining 19, the
19 last line, are loans that are still in the
20 construction phase.

21 Like Prop 39 grant program, the ECAA-Ed
22 loans fund energy efficiency and clean energy
23 generation projects. Each loan can represent
24 multiple eligible measures, and of the 29 loans, 5
25 loans have funded energy efficiency measures only, 7

1 loans funded solar projects, and 17 loans funded a
2 combination of solar and energy efficiency projects.

3 CHAIR GORDON: Liz, I was going to ask
4 about default rates, but am I right that you don't
5 know yet about repayment and potential default
6 because the projects aren't done yet?

7 MS. SHIRAKH: For this particular program,
8 for the ECAA-Ed, that is correct. We have 10
9 completed projects but to my knowledge, we're good.
10 No defaults.

11 CHAIR GORDON: No defaults. Okay, thank
12 you.

13 MS. SHIRAKH: Okay. Moving to the third
14 and final program administered by the California
15 Energy Commission is the Bright School Program.
16 Again, this falls under the ECAA-Ed Prop 39 funding.

17 The Bright School Program assists LEAs in
18 identifying energy savings projects in existing
19 school facilities. The program provides a range of
20 technical assistance services, including energy
21 audits, third party proposal review, and
22 professional engineering support activities.

23 Energy Commission through a competitive
24 contract solicitation selected prime contractor and
25 a team of professional energy engineers to provide

1 technical assistance and support. As of June 30,
2 2016, of the \$5.6 million allocated to the program,
3 \$5.5 million had been encumbered in technical
4 assistance contracts. The remaining \$91,524 were
5 reallocated to the ECAA-Ed loan program. Total
6 expenditures for this reporting period is \$2.3
7 million.

8 The Bright School Program provided
9 technical assistance to 119 LEAs and community
10 college districts, identifying energy measure
11 opportunities at 260 school sites. These energy
12 measure recommendations represent an estimated
13 annual electric savings of nearly 22,000 megawatts
14 and natural gas savings of over 260,000 therms, with
15 total estimated energy cost savings of more than
16 \$3.6 million. The identified energy measures would
17 require an investment of more than \$53 million with
18 potential utility incentives of nearly \$2 million.

19 In conclusion, the Energy Commission looks
20 forward to the program's continued growth and
21 partnership with LEAs and the Prop 39 interagency
22 group and program stakeholders to deliver a strong
23 program connecting job creation through energy
24 efficiency and clean energy project installations.

25 And this concludes my presentation. Thank

1 you so much for your time, and I'd be happy to
2 answer any additional questions.

3 CHAIR GORDON: Thank you so much, Liz, and
4 thanks to the CEC for all of the work you've done on
5 this large number of projects and reports, so thank
6 you.

7 Let's turn to questions.

8 BOARD MEMBER HARRIS: Can I ask one
9 question?

10 CHAIR GORDON: Go ahead.

11 BOARD MEMBER HARRIS: The eager one on the
12 phone.

13 CHAIR GORDON: That's Arno, I assume.

14 BOARD MEMBER HARRIS: Yes.

15 If we go back two slides, I just want to
16 make sure I understand some of the numbers that were
17 presented there. There we go.

18 The \$3.6 million in utility cost savings,
19 that's the annual anticipated savings?

20 MS. SHIRAKH: Yes, these are anticipated
21 savings estimated savings if these recommendations
22 were installed.

23 BOARD MEMBER HARRIS: Got it. Okay.

24 MS. SHIRAKH: Because again, this program
25 identifies potential projects, and you see a report

1 cover on there. What schools do then is they can
2 use these recommendations, put that into an energy
3 expenditure plan and apply for funding through the
4 Prop 39 K-12 Program.

5 BOARD MEMBER MARTINEZ: That's actually my
6 question as well. So we've identified \$53 million
7 worth of projects. Do we have any way of tracking
8 whether or not those projects have applied for or
9 have come to fruition, or will come to fruition?

10 MS. SHIRAKH: I don't have the numbers of
11 how many of these schools have actually applied to
12 our program. I know we are working on the ones that
13 still have not.

14 Do you have a number? Sixty-one of them
15 still have not applied to the program, and we are
16 doing outreach, encouraging them to submit.

17 We've actually extended or added to the
18 tasks of our technical assistance contract and now
19 offer LEAs that have gone through and have a Bright
20 School Program services to actually complete that
21 energy expenditure plan so we can get this into the
22 program.

23 BOARD MEMBER MARTINEZ: Thank you.

24 MS. SHIRAKH: You're welcome.

25 CHAIR GORDON: Walkie.

1 VICE CHAIR RAY: I think I know the answer
2 to this question, but do religious schools whose
3 religious component is de minimus, is there a logic
4 whereby they would qualify? They're nonprofit.

5 MS. SHIRAKH: Right now we are really
6 focusing on public schools that are eligible for
7 Prop 39. In the past we have funded nonprofit
8 schools with the Bright School Program, but right
9 now it's targeting public school districts.

10 VICE CHAIR RAY: So there's been a
11 conscious decision not to serve religious schools.

12 MS. SHIRAKH: Because this money is focused
13 for public school districts and the intent of Prop
14 39, you know, we have a list from CDE of schools
15 that are eligible for the program, and if those
16 schools are not on the list of eligible LEAs then at
17 this point in time we have not been funding them.

18 To be honest, I don't think we've -- I'm
19 remembering back in history prior to Prop 39, I
20 believe I remember one Catholic nonprofit school
21 coming through the Bright School Program.

22 CHAIR GORDON: The legislation allocates
23 the money to public schools so CEC doesn't have the
24 ability to go outside those boundaries.

25 MS. SHIRAKH: Thank you.

1 CHAIR GORDON: Charter school question. On
2 your slide about charter schools, clearly we talked
3 about this last year too, the charter schools not
4 having the same participation rates as the public
5 schools.

6 Do you have any idea -- you brought up some
7 good points about some of the barriers to charter
8 schools. Do you have any idea like what percent of
9 that number of charter schools rent their facilities
10 and/or are virtual and/or -- you know, the things
11 that you brought up, I'm just wondering what the
12 actual number is of eligible charter schools versus
13 the number of charter schools in California.

14 MS. SHIRAKH: It's my understanding through
15 conversations with the California Charter School
16 Association that 43 percent of charters are in
17 leased facilities, so that's a very large number.

18 CHAIR GORDON: Of your number here on this
19 chart, whatever page that is -- yes. Of that number
20 of schools, which is -- now I can't see it. I know
21 it's up there but I can't read that.

22 VICE CHAIR RAY: 1222.

23 CHAIR GORDON: 1222. So of that number
24 you're saying 43 percent of those are in leased
25 facilities?

1 MS. SHIRAKH: Yes.

2 CHAIR GORDON: I'm wondering if we could
3 somehow make that clearer, because what I worry
4 about is that the impression presented by this slide
5 is that there's somehow -- it's sort of a
6 misimpression because those who are leasing their
7 facilities are not likely to be coming in for a
8 program to fix the facilities which they don't own,
9 it's the owner/renter problem. It might be useful
10 to be able to just sort of maybe do a dotted line or
11 a shading or something to show which of those are
12 actually eligible for the program versus all charter
13 schools.

14 MS. SHIRAKH: I have learned that through
15 conversations. We're actually working with the
16 California Charter School Association to get exact
17 counts, which ones of these are in leased facilities
18 and which ones not. But I think what I hear you
19 saying is make a modification to the report; is that
20 what you're suggesting?

21 CHAIR GORDON: I'm not suggesting something
22 to hold up the report approval because we'll see
23 other questions come up. I'm mostly saying I think
24 for our report to the Legislature I would like to be
25 able to say something intelligent about the number

1 of charter schools that are actually eligible for
2 this money and it would be good if you would
3 consider doing that investigation can you tell us
4 about that and can we discuss potentially doing some
5 kind of a small amendment to that chart that
6 wouldn't require another vote?

7 MS. SHIRAKH: Absolutely.

8 CHAIR GORDON: Questions, David. One the
9 phone, Chelina, Mark? Walkie?

10 VICE CHAIR RAY: I know of a charter
11 school, a very, very successful charter school in
12 Santa Ana in a Title 1 area that operates in a
13 leased facility, it's leased from the Santa Ana
14 Unified School District.

15 Now, it seems to me that that kind of a
16 lease or a lease on a facility for a long term,
17 maybe 10 years or more, should somehow qualify the
18 charter school for these funds.

19 MS. SHIRAKH: Let me clarify that.
20 Charters in leased facilities are certainly eligible
21 for the program, they're not ineligible to
22 participate.

23 I think the challenge becomes if you are in
24 a leased facility and someone owns the building,
25 there's not a great incentive to apply to the

1 program.

2 But in the situation where we have charter
3 schools that are in publicly leased facilities,
4 often the public school district -- for example, Los
5 Angeles Unified School District is working with
6 their charters that are in public facilities helping
7 them identify their projects and kind of moving
8 these energy applications along. The challenge,
9 though, is it depends on the relationship with the
10 public school district and the charter.

11 Does that make sense?

12 VICE CHAIR RAY: I'm sorry, I don't
13 understand, I'm slow.

14 MS. SHIRAKH: So no, the way the structure
15 of this program works is that each charter has to
16 submit their own application, and so if they're in a
17 public school district, that school district can't
18 actually submit an application for them, so they
19 have to work in partnership, and I think sometimes
20 that might be a challenge.

21 VICE CHAIR RAY: You mean the charter
22 school would have to submit the application together
23 with the public school that owns the facility?

24 MS. SHIRAKH: The charter school submits
25 the application to the Energy Commission.

1 VICE CHAIR RAY: Right.

2 MS. SHIRAKH: But because they're leasing
3 the public school district facility, they need to be
4 working in coordination with that public school
5 district.

6 VICE CHAIR RAY: Why? Why?

7 MS. SHIRAKH: Because the public school
8 district owns the building, it's their building.

9 VICE CHAIR RAY: I know, but if the charter
10 school is putting new efficient LED lighting in, the
11 school district is going to be delighted.

12 MS. SHIRAKH: And that's great. And when
13 we have charters that come in on their own and do
14 that, that's awesome. That's fantastic. I'm just
15 saying that sometimes in leased facilities there may
16 be less incentive to take the time to apply to the
17 program.

18 VICE CHAIR RAY: I sensed that a leased
19 facility didn't qualify, so --

20 MS. SHIRAKH: No, leased facilities
21 definitely qualify.

22 CHAIR GORDON: That was my mistake, I'm
23 sorry, I used the word 'eligible' and I shouldn't
24 have used the word 'eligible.' What I actually
25 meant was it would be good to know the -- yeah,

1 there's disincentive in some of these cases with
2 short term leases in particular. So I'm sorry about
3 that, that was probably my fault.

4 VICE CHAIR RAY: Well, as a suggestion, you
5 might engage in outreach to charter schools in
6 leased facilities as I know they too would like to
7 see energy efficiency.

8 MS. SHIRAKH: Yes, yes.

9 CHAIR GORDON: Questions on the phone?
10 Arno, any burning follow-up questions? Mark,
11 Chelina?

12 BOARD MEMBER ODBERT: None.

13 BOARD MEMBER HARRIS: None.

14 BOARD MEMBER GOLD: I'm good.

15 CHAIR GORDON: Are we ready for a motion to
16 -- what we're moving, just to be clear, we are
17 voting today on whether to accept this report as our
18 input to the report that we're giving to the
19 Legislature. I would propose that we make that
20 motion in a way that allows for small modifications
21 of things like charts or fonts or, you know,
22 subheads and not have to have another vote, so I
23 would love it if we could get a motion that allowed
24 for that.

25 BOARD MEMBER MARTINEZ: So moved.

1 VICE CHAIR RAY: Second.

2 CHAIR GORDON: Perfect. Can we do a roll
3 call on these just because I can't see everybody?

4 MR. BASTIDA: Yes.
5 Board Member Gordon?

6 CHAIR GORDON: Yes.

7 MR. BASTIDA: Board Member Ray?

8 VICE CHAIR RAY: Yes.

9 MR. BASTIDA: Board Member Harris?

10 BOARD MEMBER HARRIS: Aye.

11 MR. BASTIDA: Board Member Odbert?

12 BOARD MEMBER ODBERT: Aye.

13 MR. BASTIDA: Board Member Martinez?

14 BOARD MEMBER MARTINEZ: Yes.

15 MR. BASTIDA: Board Member Dias?

16 BOARD MEMBER DIAS: Yes.

17 MR. BASTIDA: Board Member Gold?

18 BOARD MEMBER GOLD: Yes.

19 MR. BASTIDA: The motion is adopted.

20 CHAIR GORDON: Motion is adopted. Thank
21 you. And can I just say thank you -- we should have
22 said this earlier -- but to Jack Bastida for being
23 very proactive about coming up with a standardized
24 approach for these reports last year, but also to
25 all of you for getting reports in on time because it

1 just makes this whole process so much easier and
2 we're able to absorb the information and talk about
3 it and understand it, so makes it a lot smoother, so
4 thank you, Liz and everyone, Chair Weisenmiller and
5 everyone at the CEC.

6 All right. Moving on to the California
7 Community College Chancellor's Office, the next
8 report, and Carlos Montoya is here to present.

9 MR. NGUYEN: I'll be talking in Carlos's
10 stead.

11 CHAIR GORDON: And just tell us your name
12 and your role, if you would.

13 MR. NGUYEN: Okay. Good afternoon. I'm
14 Hoang Nguyen from the Chancellor's Office. With me
15 today I have Mario Rodriguez, the Vice Chancellor
16 Finance and Facilities Planning, and of course,
17 Carlos Montoya, the Director of Facilities Planning.

18 Thank you for giving us the opportunity
19 today to tell you about our success with the Prop 39
20 Program and of course take into consideration the
21 approval of our report here.

22 The Chancellor's Office Prop 39 Program
23 carried out the initial success from year one into
24 years two and three, which are reported here,
25 through the partnership with the IOUs and our

1 consultant, Newcomb Anderson and McCormick. We
2 assisted the districts through the planning process
3 all the way up until the completion of each project.

4 We are currently working with our partners
5 to work on year five, the planning of it.

6 So the report that we have here today
7 consists of years two and three of the program for
8 the facilities program side of the house. Workforce
9 and economic development is only reporting year two,
10 which I'll explain why later on.

11 For the funds used by the districts for the
12 facilities program for years two and three, of the
13 \$64.2 million allocated we have \$2 million
14 unencumbered remaining.

15 We had 254 projects closed out that equated
16 to \$54.9 million in total project costs, which was
17 able to save 30 million kilowatt hours, 316,000
18 therm savings, for a total of \$4 million in energy
19 cost savings.

20 The incentives paid back to the districts
21 was a little under \$6 million.

22 The direct job years that were produced
23 from these projects was 300 and a little over 8
24 trainee job years.

25 So the energy saved from these 254 projects

1 from years two and three would be able to power over
2 5,000 homes.

3 The lighting projects are still the most
4 prominent projects out of the loading order. They
5 take over 60 percent on average between years two
6 and three. HVAC projects come in second, averaging
7 slightly above 17 percent, followed closely by the
8 control type projects, which also average on the
9 lower end of 17 percent, followed by the remaining
10 projects around 1 percent each.

11 For in-progress projects we have 481
12 projects that equated to \$110 million in total
13 project costs. These projects are estimated to save
14 44.7 million kilowatt hours, 1.3 million in therm
15 savings, for an estimated \$7 million in energy cost
16 savings. The incentives paid back to the districts
17 is estimated to be around \$9.6 million.

18 The direct job years that will be produced
19 from these projects is 605 and estimated at 16
20 trainee job years.

21 CHAIR GORDON: Quick question while we're
22 on this.

23 MR. NGUYEN: Yes.

24 CHAIR GORDON: We're just looking at the
25 chart on Page 11 of the report that shows lighting

1 and HVAC and the other.

2 MR. NGUYEN: Um-hmm.

3 CHAIR GORDON: There's only one solar
4 project and I'm just interested in your thoughts on
5 why there aren't more self-generation projects. In
6 general what do you attribute that to?

7 MR. NGUYEN: Mainly attribute it to a whole
8 lot of lighting projects on district emphasis. They
9 started off with parking lots and the outside of the
10 campus. Now they're working on the actual buildings
11 themselves on the interior, so lighting projects,
12 unless they're really good districts where they're
13 practically energy efficient like the one here which
14 came from San Mateo, they didn't really have a
15 chance to start on them yet.

16 VICE CHAIR RAY: Do you think that by and
17 large the junior colleges have now upgraded their
18 lighting?

19 MR. NGUYEN: I do.

20 VICE CHAIR RAY: So the hit -- I got to be
21 careful of the way I use words from my profession --
22 the bump from going to LED is not -- we're not going
23 to have that in the future.

24 MR. NGUYEN: I don't believe so unless
25 there's some new technology out there that vastly

1 improves it over LED.

2 VICE CHAIR RAY: And what about controls,
3 HVAC and lighting controls, have you mostly done
4 that?

5 MR. NGUYEN: Not at all. Right now they're
6 trying to bundle lighting with HVAC to meet the SIR
7 rating.

8 VICE CHAIR RAY: Do you think it's going to
9 be increasingly difficult to meet the SIR rating
10 given lighting will not be available?

11 MR. NGUYEN: Well, right now we still have
12 interior lighting for the buildings, so they're
13 working on that.

14 VICE CHAIR RAY: You've got how many --
15 you've got three years left before you exhaust that?

16 MR. NGUYEN: We're working on the last year
17 and a half of the program itself. The last time we
18 talked with the IOUs and our consultant and
19 districts, which is part of our partnership, they
20 said some districts still have lighting projects for
21 their buildings left over, so it's in progress.

22 MR. RODRIGUEZ: I'm Mario Rodriguez, I
23 could try to help maybe answer your question.

24 So I think Hoang, everything he said is
25 correct so far in the fact that our districts

1 initially have primarily focused on the lighting and
2 the controls as opposed to self-generation. That
3 has to do not with just by chance, that has to do
4 with that's what our office has suggested as a
5 loading order for the colleges, so before they start
6 focusing on self-generation, take care of the
7 efficiency side as much as possible, lower your bill
8 before you start developing self-generation
9 projects.

10 VICE CHAIR RAY: Well, self-generation has
11 a very low return on investment, generally speaking.

12 MR. RODRIGUEZ: That's partially why it's
13 also in the loading order that it's in toward the
14 end as well. So Hoang is also correct when he's
15 stating that initially they're starting on the
16 outside of the building and they're moving toward
17 the inside of the building.

18 The longer this program goes on, the less
19 lighting projects that are still available. But I
20 think the question you were asking was possibly
21 trying to get at when is that year, and I think for
22 us it's very difficult for us to tell besides
23 stating the fact that I just stated, which is you're
24 right, that the longer this project goes on the less
25 of those lighting projects that are available, and

1 so we're in year four, almost heading toward year
2 five of potentially a five-year program, so if this
3 extends out to ten years maybe we won't have as many
4 lighting projects anymore, but we think if it's a
5 five-year program we feel pretty confident that
6 we'll be able to maintain the savings to investment
7 ratio and get the projects done in a timely manner.

8 VICE CHAIR RAY: Thank you.

9 MR. NGUYEN: Continuing on from in-progress
10 projects. The energy estimated to be saved from
11 these 481 projects will be able to power over 8800
12 homes.

13 Moving on to workforce and economic
14 development. They are currently only reporting year
15 two for this report. This is due to their program
16 which uses a grant application process which
17 districts apply for, so this creates a longer cycle
18 starting at year one.

19 So workforce and economic development are
20 looking into expediting their program possibly by
21 simultaneously going through all their remaining
22 funding years.

23 For year two workforce and economic
24 development received 12.8 percent of the total \$37.9
25 million, which resulted in \$4.8 million for them to

1 create and improve curriculum, provide professional
2 development for faculty and support for regional
3 collaboration, developing partnerships and networks
4 for continued success for their students and
5 faculty. With that money more than 5000 students
6 completed degrees and certificates in year two; 700
7 of those students completed with an AA or an AS
8 degree; over 2000 completed a certificate and over
9 2500 with an industry or apprenticeship certificate.

10 CHAIR GORDON: Sorry, just on this, do you
11 have any sense of job placement numbers?

12 MR. NGUYEN: That I do not have. I'll have
13 to ask WED for that.

14 CHAIR GORDON: That would be great to know
15 just for our overall understanding of how the
16 program is working.

17 MR. NGUYEN: Okay, I'll ask them.

18 So in conclusion, our office is currently
19 working with districts for year five funding so they
20 can get started on their project list. With the
21 initial (inaudible) preliminary budget we sent out
22 an estimated allocation to the districts so they
23 could get started working on it with the IOUs and
24 our partners, NAM. Once the final budget comes out
25 in June, we're expecting all the applications to

1 come in so that districts can get started in July
2 and August, so that way they can complete the
3 projects within the specified timeframe.

4 So our goal here is to continue the
5 momentum that we had from year one and finish out
6 this final year.

7 And that concludes my presentation.

8 CHAIR GORDON: Thank you. We'll go to
9 discussion.

10 Yes, David.

11 BOARD MEMBER DIAS: Who are the incentive-
12 owned utilities?

13 MR. NGUYEN: They're entities known as
14 PG&E.

15 BOARD MEMBER DIAS: Don't you mean
16 investor-owned, then?

17 MR. NGUYEN: Yes.

18 BOARD MEMBER DIAS: It says "Incentive."

19 CHAIR GORDON: Which page is that?

20 BOARD MEMBER DIAS: All through this thing.

21 CHAIR GORDON: Oh, typo, sounds like.

22 BOARD MEMBER DIAS: I was confused.

23 MR. RODRIGUEZ: Yeah, our apologies.

24 Someone must have done a find-and-replace on the
25 document. We'll double check that when we get back

1 to the office.

2 BOARD MEMBER DIAS: I was wondering how an
3 incentive owned a utility. Sorry.

4 MR. RODRIGUEZ: The investor-owned
5 utilities provide incentives, that's how it's
6 supposed to work. So our apologies.

7 BOARD MEMBER DIAS: Okay, no problem.
8 Thank you.

9 CHAIR GORDON: Good catch, David, thank
10 you.

11 Questions from here or on the phone on the
12 California Community Colleges report?

13 Arno, is that you?

14 BOARD MEMBER HARRIS: Yeah, I was just
15 going to say I had the same question on the IOUs but
16 I have no other questions, thank you.

17 CHAIR GORDON: Other questions on the
18 phone.

19 BOARD MEMBER GOLD: No. No questions. You
20 asked the solar question which was my question as
21 well, so we're good.

22 CHAIR GORDON: Great. I have one more
23 question which actually goes to some of the earlier
24 discussion.

25 So we know from the past couple of years

1 that the community colleges obviously run this
2 program from a very centralized way, right, from the
3 Chancellor's Office.

4 MR. NGUYEN: Correct.

5 CHAIR GORDON: Do you have a sense of --
6 did you map out the five years? Like do you have a
7 sense of where the money will go through the end of
8 the program? Because you're running it all
9 centrally and you have a good amount of
10 communication with your districts.

11 MR. MONTROYA: Hi, this is Carlos Montoya.

12 Not really. Our districts every year go in
13 through a planning process so right now we've
14 actually done a call for projects for year five, and
15 so we will know, I think by April 1st is our
16 deadline, of what we start to anticipate in terms of
17 projects for year five.

18 When we originally started the program we
19 thought, well, we ran it as five one-year programs
20 where we were trying to get projects and funding out
21 each and every single year, and we built it on the
22 strength of an existing partnership with the
23 investor-owned utilities that we've had in place
24 since 2006.

25 So for us, when this program came into

1 place it was actually providing us additional
2 funding on top of a program that we were already
3 starting to work with our districts. Since we do
4 have 72 semi-autonomous local districts, so the
5 startup and coordination is usually kind of a heavy
6 part of the process so we were just lucky to have
7 that ahead of time.

8 CHAIR GORDON: Got it. Thank you, that's
9 helpful.

10 Other questions? Any other questions in
11 here? All right, we should move to a motion with
12 the same caveat -- especially since we found a typo
13 already -- the same caveat as the last time
14 regarding grammar/other small changes. Is anyone
15 willing to make that motion?

16 BOARD MEMBER DIAS: So moved.

17 BOARD MEMBER ODBERT: So moved.

18 CHAIR GORDON: Oh, we had two of them, so
19 Chelina, I'm going to go with you since you haven't
20 moved anything yet.

21 BOARD MEMBER DIAS: Second.

22 CHAIR GORDON: Great. Can we do a roll
23 call please, Jack?

24 MR. BASTIDA: Of course.

25 Board Member Gordon?

1 CHAIR GORDON: Yes.

2 MR. BASTIDA: Board Member Ray?

3 VICE CHAIR RAY: Yes.

4 MR. BASTIDA: Board Member Harris?

5 BOARD MEMBER HARRIS: Yea.

6 MR. BASTIDA: Board Member Odbert?

7 BOARD MEMBER ODBERT: Yes.

8 MR. BASTIDA: Board Member Martinez?

9 BOARD MEMBER MARTINEZ: Yes.

10 MR. BASTIDA: Board Member Dias?

11 BOARD MEMBER DIAS: Yes.

12 MR. BASTIDA: Board Member Gold?

13 BOARD MEMBER GOLD: Yes.

14 CHAIR GORDON: Great, so moved. Thank you,
15 everybody. I like how we keep switching between aye
16 and yes and we got a yea this time, that was good.
17 We keep coming up with new ways of saying that.
18 This is great, thank you.

19 Thank you so much, Community Colleges.

20 MR. NGUYEN: Thank you.

21 CHAIR GORDON: You guys have done a great
22 job of organizing these programs.

23 Moving to a presentation from the
24 California Conservation Corps, Bill McNamara is
25 here.

1 Hi, Bill.

2 MR. McNAMARA: First of all, I wanted to
3 say thank you very much for inviting us to present
4 today, it's always a pleasure to see you all.

5 There are two forms of this. My name is
6 Bill McNamara, I'm the Director of Energy Programs
7 of the California Conservation Corps.

8 There are two forms of the presentation.
9 There's the slide set that I sent and also a more
10 detailed text oriented version, although my slide
11 presentation has a lot of text as well, which is the
12 actual report itself.

13 So I wanted to start out by -- first slide.

14 We just wanted to start out, especially
15 since we have at least one new Board Member, to give
16 a little context of who the CCC is and what we
17 actually do, that sort of thing, before we get into
18 what it is we've actually accomplished.

19 So the Conservation Corps is a state
20 agency, part of the Natural Resources Board, and its
21 function is in the sense of workforce development
22 and work/learn programs to assist young adults
23 between 18 and 25 throughout California and also
24 returning veterans up to 29.

25 So in that regard the CCC has within its

1 organization a separate, well, an operational group
2 called the Energy Corps that was founded in 2013.

3 So the design of what we're doing with the
4 energy efficiency funds that come from the Clean
5 Energy Jobs Act are focused on actually producing
6 clean energy in the sense of -- I'm sorry --
7 reducing energy use through energy efficiency,
8 reducing energy costs, reducing greenhouse gas
9 emissions, and also creating job opportunities for
10 these young corps members in the energy industry and
11 elsewhere. Those are the main focus points for what
12 the CCC is actually doing.

13 Next.

14 So we have 26 operating locations
15 throughout the state, and since the last report a
16 year ago we've actually made one significant change,
17 which is we've combined a number of our resources so
18 there are a total of 10 California Conservation
19 Energy Corps crews that work on Proposition 39
20 funded activity, and so we've created 4 energy
21 centers in the state of California. They are in
22 Sacramento, San Jose, Norwalk and Vista, which is in
23 northern San Diego County.

24 So those facilities, whereas they used to
25 be co-joined where they would do natural resource

1 work and energy work on a more distributive basis
2 are now focused entirely on delivering energy
3 efficiency and renewable energy services.

4 We also have one additional location in
5 Fresno in the Central Valley where there is one
6 Energy Corps crew that operates out of the Fresno
7 center but it's primarily a natural resource
8 location for the CCC.

9 So from that standpoint we move our
10 resources out from those locations to anywhere in
11 the state and service according to wherever the
12 demand may be.

13 So from the standpoint of the actual goals
14 themselves, again, they're really quite
15 straightforward.

16 We provide energy industry training for
17 these young corps members, young adults, that is
18 focused on primarily energy efficiency. We start
19 with training them for doing ASHRAE compliant energy
20 audits, which we call energy opportunity surveys.

21 They then go out into the field and
22 actually practice this on hundreds of buildings, and
23 they do many, many audits, many buildings.

24 Then we take the same group of people and
25 we bring them back in and train them again to do

1 energy efficiency retrofit work. And our focus,
2 perhaps not surprisingly, on energy efficiency
3 retrofit work is on lighting and controls. And we
4 have a great deal of data regarding the individual
5 schools, which I'll get into in a minute, that might
6 actually address some of the points that were
7 brought up in the earlier presentations as well.

8 You know, as a combination of training and
9 extensive workforce on-the-job training, workforce
10 classroom training, and on-the-job training we have
11 a very substantial number of projects that are
12 actually engaged in by the corps members, both in
13 terms of the energy opportunity surveys and also in
14 the retrofit side.

15 The net of that is that we end up creating
16 many different pathways for employment for these
17 young adults, meaning in many cases the CCC Energy
18 Corps is really all about partnership, working with
19 others. And so as we work with contractors and
20 ESCOs and third party energy efficiency companies
21 and utilities throughout the state, these young
22 corps members get a chance to be exposed to many
23 things, many positive training events, and also,
24 these are all potential employers, many of whom have
25 actually gone ahead and employed or actually

1 recruited directly from the CCC ranks, and we have
2 the numbers which I'll get to at the end.

3 CHAIR GORDON: No, I was going to ask the
4 placement rate number again.

5 MR. McNAMARA: Exactly. So the CCC itself
6 -- next slide.

7 So this slide does a couple of things.
8 First of all, it reports at the top of the slide
9 what the actual allocations have been to the CCC
10 since the 2013 timeframe, and you can see that in
11 2016/17 the allocation was \$5.66 million. So the
12 scale of the allocation to the CCC is not, you know,
13 tremendously large by comparison to what we've seen
14 already, but the results from what we're doing
15 actually are pretty considerable, meaning pretty
16 substantial.

17 So the way in which it works is we take our
18 allocation and we apply those funds to these
19 different program activities, energy opportunity
20 surveys and retrofits, and we offer those services
21 in the form of labor and work to the LEAs throughout
22 the state, so in that sense we are working in
23 partnership either directly providing the services
24 to the LEAs or working with other energy service
25 providers that the LEA may actually have contracted

1 to do that work.

2 Next.

3 The three services that we actually provide
4 are, as I mentioned, energy opportunity surveys,
5 which are the ASHRAE compliant energy audits, and
6 also these are low cost energy opportunity surveys.

7 We also provide low cost retrofit projects.
8 And the term 'low cost' means in the case of the
9 retrofit projects is that we don't actually purchase
10 the materials or the retrofit materials themselves,
11 that's incumbent on the LEA to purchase, whether
12 they are purchasing it with their own Prop 39
13 allocation or other funds. But by actually
14 providing the labor to do the installations we
15 actually provide a substantial furtherance of their
16 ability to purchase more of these lighting
17 retrofits, and therefore we can do a broader
18 spectrum of work for them, which we do with some
19 frequency.

20 The third element is a no cost or low cost
21 energy efficiency educational engagement, and I'll
22 show you what that actually looks like in its
23 furtherance, but essentially, we do presentations on
24 energy efficiency within the classroom environments
25 for students. This is all focused on K-12 schools.

1 We also do program innovation work with
2 them, and the largest of those, which I'll show you
3 shortly, is with the Los Angeles Unified School
4 District.

5 CHAIR GORDON: Bill, you might get to this
6 later, but what percent of the projects that are in
7 process or have been completed so far through the
8 CEC do you have Conservation Corps members doing
9 audits and even more so doing the retrofits, do you
10 know?

11 MR. McNAMARA: We don't have across table
12 information between what the LEAs have actually
13 applied on the EEP side to the CEC and approved,
14 unless they report that back to us.

15 What we have is our services are offered
16 directly to the LEAs themselves, so they have a
17 tendency to -- in some cases they will actually
18 refer to or make use of the CCC's energy opportunity
19 surveys as the CCC's energy opportunity surveys in
20 their submission with the EEP package. So that
21 information could be derived but we don't actually
22 have that as an independent -- I mean, as the CCC
23 itself.

24 Next slide.

25 So let's take a look at what that actually

1 looks like today.

2 So when we designed this program the idea
3 was we would start in the beginning by doing
4 assessments of as many locations as we could
5 possibly do with the funding that we were provided
6 to do that. So in the first year of funding, 2013
7 from July 1st forward to the end of the year we were
8 spinning up or staffing up and training and putting
9 together the curriculums and working with UC Davis
10 Energy Efficiency Center and private sector entities
11 as well to put together, you know, industry standard
12 approaches to doing energy audits, knowing that we
13 would do those at least for the first full year
14 exclusively before we began to do retrofits. It's
15 kind of like measure before you cut. So we provided
16 those activities in 2013 and 2014.

17 The chart here shows the year-to-date,
18 meaning year-to-date at the end of the calendar year
19 2016, so this information starts in 2013, goes
20 through 2016, and then the to-date column is the
21 cumulative of all of that through the end of
22 December 2016.

23 So within that timeframe we've done a total
24 of 1,258 surveys of school campuses, or audits of
25 complete, all the condition building and all the

1 exterior condition to ASHRAE level 2 compliance. So
2 it's a very extensive set of data on those.

3 From a building standpoint, those 1,258
4 school campuses actually have a total of 12,653
5 buildings, these are condition building spaces. So
6 we have actually done approximately 20 percent of --
7 or actually had a response rate of about 20 percent
8 of the total LEAs in the state in terms of we've
9 actually done service work for.

10 So we actually are accumulating, we think,
11 one of the largest detailed databases of actual
12 room-by-room plug loads, fenestration of the
13 envelope, full envelope insulation, all the energy
14 use subsystems and all the best practices -- well,
15 maybe not best but all the practices, O&M practices
16 of all of those buildings that exist anywhere for a
17 single market segment identified as commercial
18 buildings in the class specifically to schools, so
19 it's a very substantial set of data that we have and
20 we have intention of making, of course, that
21 available and working with other entities who might
22 like to mine that data.

23 So we've done, again, from a survey
24 perspective we've done 408 LEAs, we've actually
25 performed survey work for 408, which is about 20

1 percent of the existing population of LEAs
2 statewide.

3 Next.

4 So what does that actually look like?

5 So as part of the process we started on
6 paper doing the ASHRAE standard level audits, and we
7 quickly found that that was really not the best
8 approach, so we ended up developing a very simple
9 ASHRAE, basically taking the ASHRAE level 2 forms
10 and converting them into a tablet based system so it
11 works on an Android system. You can use your phone,
12 you can use a tablet, you can use this to collect
13 the data and also to create a very extensive
14 photographic inventory to go with, on a relational
15 model, to go with all of the rooms and all the
16 things that have been observed.

17 And again, from a survey content standpoint
18 it's a whole building approach. It's the envelope,
19 lighting, control systems, HVAC, internal plug
20 loads, integrated energy management systems,
21 fenestration, and O&M practices, so it's a very
22 extensive view into all of these facilities.

23 Next. Actually you've got the next, thank
24 you.

25 So I mentioned that the data itself is very

1 extensive, and we have had some inquiries to make
2 use of the data. In particular, our working
3 relationships to develop the energy opportunity
4 survey in conjunction or in partnership with UC
5 Davis Energy Efficiency Center. There was an
6 intentionality there -- there is the intention there
7 of actually putting all of that information into a
8 relational database and making that available and
9 cross indexing other data as well, but as I said,
10 it's a very substantial set of data. It represents
11 about 20 percent, we think, of the total population
12 of buildings in the state, so it's at least based on
13 the averaging that we see now. We've done
14 everything from the largest school districts to the
15 smallest of the school districts throughout the
16 state, which I'll show you what that looks like.

17 Next.

18 On the eventuality or the progression of
19 the program especially toward the end of 2015 and
20 through all of 2016 was to move the ten crews which
21 originally were focused on doing energy opportunity
22 surveys to create a balance that finally moved to
23 seven and three. So we do seven of the crews do
24 actual retrofit work at LEAs, schools, and therefore
25 create direct energy savings and direct cost savings

1 and direct greenhouse gas reductions.

2 And three of the remaining crews actually
3 do energy opportunity surveys and sometimes in
4 addition, depending on the demand load, they will
5 actually do retrofit work.

6 But all of the crews have been cross
7 trained into both of those activities so that they
8 really represent a pretty substantially attractive,
9 from an employment standpoint, entry level group of
10 individuals, which again I will show you in terms of
11 how that's playing out.

12 Corps members typically sign up for a year
13 at the CCC, and many of the Energy Corps corps
14 members are hired away well before that one-year
15 period, which is a good problem for us to have in
16 the sense of that's the intention.

17 On the retrofit side we've done a total of
18 79 projects since sort of late 2015. These projects
19 are fairly large scale, meaning they're entire
20 school campuses, multiple buildings. Sometimes for
21 a school district there will be many school campuses
22 done over an extended period of time, but they take
23 a lot longer to do, obviously, than the surveys do,
24 so the resources are tied up for a longer period of
25 time -- or deployed for a longer period of time to

1 do that kind of work, but ultimately they are
2 generating very substantial amounts of savings.

3 From that standpoint, we've done a total of
4 115,222 lighting retrofit changes, which would be
5 lighting fixtures and associated ballasts. There
6 are other work associated with that that we do. And
7 we've done about 8,883 of lighting control
8 installations as well throughout the state.

9 The lighting changes that we've done is
10 actually about 15 different types of lighting
11 changes that we've done, both exterior and interior.
12 The most common is to convert from fluorescent to
13 LED tube lights. And in some cases, depending on
14 who the vendor is that the LEA selects to purchase
15 from, they may be with or without ballasts.

16 But ultimately all of these changes are
17 also effecting on the subjective side the quality of
18 the educational environment itself, so there's a
19 really positive multifaceted aspect of what we do.
20 Sometimes we tend to be talking about the energy
21 side, you know, exclusively, but there is in fact a
22 real effect on people as a result of this, and
23 that's something that we, as the people who install
24 this and work with the school districts, get to see
25 very personally. We'll observe the actual

1 conditions and see what it looks like and talk to
2 the teachers and students after the work is done.

3 From that standpoint, we have estimated
4 annual and sustainable KWH savings of about a little
5 over 7 million KWH to date. And there are many
6 projects that are in progress that are not yet
7 completed that are obviously not yet reported, but
8 this is through the end of 2016.

9 And from a greenhouse gas emissions
10 standpoint, using simple calculations from the EPA,
11 it's about 1.683 metric tons of greenhouse gas
12 emissions abated.

13 Next.

14 This page here is simply restating some of
15 that in terms of showing the progression of that
16 growth of effect over years. So the blue chart over
17 here is talking about cumulative KWH saved through
18 the end of 2016. And then the green one is the cost
19 savings. And then sort of the orange color one is
20 greenhouse gas reductions.

21 Next.

22 This chart -- and you can see it more
23 clearly in the report than this actual very minute
24 portrayal here -- is of all the 58 counties in the
25 state of California.

1 Of the 58 counties, we've done a total of
2 more than 400 LEAs, and the distribution of those
3 LEAs is in 50 of the 58 counties. So 8 of the
4 counties we have not yet served. That doesn't mean
5 that there isn't a request in to do work, but we
6 have not yet completed work in those areas, so
7 anybody who is interested in the distribution from
8 that county perspective, it's here for you to look
9 at.

10 The next slide is showing from an
11 educational standpoint. So the first two were
12 energy opportunity surveys and then the retrofit
13 services, and the third one is educational
14 engagement.

15 Now, some of that is very straightforward,
16 as I said, doing presentations in the classroom
17 environment for students and for other interested
18 parties about energy efficiency, answering
19 questions, promoting the understanding and the
20 engagement of that especially with K-12 students.

21 But in addition to that, we also help to
22 architect programs that are interactive engagements.
23 So for example, with the L.A. Unified, which is the
24 second largest school district in the country,
25 largest in California, they have a pretty extensive

1 linked learning program wherein they are able to
2 make arrangements with different private sector
3 companies to work with their students and actually
4 hire the students on a cooperative education program
5 and give credits for this and take the students as
6 employees and they're actually employees of the
7 school district during that period of time.

8 So one of the things we did is that the
9 services that we offer have quite a heavy bias,
10 which are on these charts, in the sense that we are
11 trying to provide as many of these to ADA 5000 or
12 less in terms of size of schools.

13 We service all schools who make a request,
14 that's without a doubt, but we give some slight
15 scheduling preferences to schools that are ADA 5000
16 and less, and also that have 50 percent or more of
17 the free and reduced priced lunch. So those
18 combinations work together.

19 L.A. Unified is unique in the sense that
20 they applied for 13,300 building audits, of which we
21 provided 30 campuses. And the campuses we provided
22 were all charter schools, by the way. And that was
23 not us who said, gee, let's do all the charter
24 schools, because there are 56 of them in the L.A.
25 Unified. These are leased entities that lease from

1 L.A. Unified, or so they report to me.

2 And so what we did was we said, okay, well,
3 you pick the schools that you want. Obviously we
4 can't do the full 13,300 buildings, but we suggest
5 you take who you think are the least efficient or at
6 least oldest buildings or some combinations of those
7 and come back to us with who you want to do, and
8 they came back with a list that was all charter
9 schools.

10 And they very actively promote -- this is
11 firsthand observation over two and a half years with
12 them on this topic -- they very actively promote the
13 charter schools that are leasing from them their
14 school facilities to apply for these types of, you
15 know, for their EEPs and to make use of the
16 Proposition 39 funding. So we ended up doing a
17 total of actually 31 of their schools, the CCC
18 providing the services.

19 But then the next step was, they have so
20 many other facilities so we worked with one of the
21 local corps. There are 14 local corps in the state
22 of California. Now, they don't get funding from
23 Prop 39 in the sense of an allocation like the CCC.
24 However, they can be funded to do the same sort of
25 work by the LEA themselves using their Prop 39 funds

1 or non-Prop 39 funds. So we worked with them to
2 train the local Conservation Corps to be able to do,
3 using our curriculum and our materials and our
4 software systems to do the tablet surveys, etcetera,
5 and they ended up getting a multi-year contract with
6 L.A. Unified and the CCC provides initial training
7 for the students and then they have -- well,
8 actually, initial training for the L.A. CCC to do
9 the surveys for them.

10 But then we took it one step further and
11 said, okay, so how about if we train some of the
12 students, some of the high school students that
13 might be in your linked learning program, and so
14 they created a new program which has been announced
15 and the kickoff for that will be toward the end of
16 February or early March, and that new program is
17 called the SEAT Program, Student Energy Auditor
18 Training.

19 And that program actually we have trained
20 the first group of 20 of these students in the first
21 week of January. They now are deployed to work
22 onsite in the school district buildings throughout
23 the school districts in combination with the Los
24 Angeles Conservation Corps who has been contracted
25 to do energy opportunity surveys. So they've gone

1 through the same classroom environment that the L.A.
2 Conservation Corps folks go through to be trainers
3 like we do for our corps members, and then they go
4 out on the job and work as part of that crew.

5 So it's an extensive program. Half of the
6 group goes through an additional eight weeks of
7 classroom training and then they switch that group.
8 They go back out into the field, the other field
9 group comes back into the classroom.

10 That's an example of some of the work that
11 we've been doing to help further the Clean Energy
12 Jobs Act intention of creating job opportunities.
13 It's creating many pathways for these high school
14 students as well as our corps members for employment
15 and also to community colleges, which we're
16 promoting them as a pathway that they should
17 consider.

18 Next slide. Good.

19 CHAIR GORDON: Bill, sorry, on that last
20 point, are you working directly with the Community
21 College Chancellor's Office on that connection? I
22 mean, is that like a formal relationship with the
23 community colleges?

24 MR. McNAMARA: So the answer to that is
25 yes, we do have -- we don't work -- let me rephrase

1 that.

2 So we do work with community colleges, and
3 as a point which you'll see coming up very shortly,
4 we work with Sierra College, for example, we
5 contract them and we work with them very closely to
6 develop the training for energy opportunity surveys
7 as well as retrofit lighting retrofit classes,
8 etcetera.

9 And we have worked in the sense of talked
10 to and addressed different ways of working together
11 with the Community College Chancellor's Office as
12 well, but there isn't an active program. There has
13 been some funding at the present, but that's an
14 ongoing activity. So we work with individual
15 community colleges. L.A. Trade Tech is another
16 example.

17 So on the training side, we've trained a
18 total of 553, on the survey side, 553 students which
19 are corps members, and we've done 301 retrofit
20 training of individuals.

21 Now, the thing is those are additive like
22 you put those two together. In most cases, almost
23 all cases, the 301 are part of the 553, but what I'm
24 doing is providing the detail of all the different
25 training and the level of training and activity that

1 these good folks, corps members, are actually
2 engaged in, and I provide that data in this table
3 from the beginning, July of 2013, all the way
4 through the end of 2016 so that you have a sense of
5 how that's building up and what its effect is.

6 On the staff side, I provide the same
7 information from the beginning 2013 through the end
8 of 2016. We've trained a total of 37 of our staff
9 and deployed them throughout the state. That
10 doesn't mean that they're all still there, there is
11 attrition over time, but most of them are there.

12 Next.

13 So this simple graph is an illustration of
14 we draw -- on the lower left side with the big blue
15 arrow, we draw people from all over California,
16 young corps members, to join the CCC. They then go
17 through this process which is up the pyramid, if you
18 will. Everything from recruitment through comet
19 training, which comet is kind of like a boot camp
20 equivalent training, you know, physical training as
21 well as social training, etcetera, in preparation
22 for more technical training and moving out into the
23 field.

24 Of the corps members that want to go into
25 the energy field, which is a large percentage. The

1 CCC itself has about 1240 corps members right now.
2 It's authorized from a FTE perspective to have about
3 1500. So of those, then begin a pretraining
4 engagement, and that goes through Schneider
5 Electric's Energy University courses, which are
6 online courses. So they do a number of those
7 courses in preparation, and then they go to be
8 trained first for the energy opportunity surveys and
9 they go out in the field and deploy and work in that
10 area. Then they come back in again to do energy
11 efficiency retrofit training.

12 And then there's also another aspect
13 whereas most of the corps members are deployed in
14 crews, meaning CCC managed, CCC administered using
15 our facilities, trucks, etcetera, to move them
16 around.

17 There also are a number of engagements
18 where we use an internship model where a third party
19 energy efficiency company or ESCO might want or be
20 willing or want to have corps members join in with
21 their crews to work with their crews, so they are
22 supervised by the sponsoring partner under a set of
23 rules and responsibilities that we have for
24 internship. That is a small number by comparison to
25 the crew model but it does exist and there is great

1 interest.

2 From the internship model, a very high
3 percentage, more than 80 percent of the interns are
4 hired away by the people who bring them in. It's
5 kind of like a try before you buy model, so it's
6 been very successful in that regard.

7 Next.

8 So the demand on the survey side, so in
9 August of 2013 we put out the announcement to all
10 the LEAs of availability of energy opportunity
11 surveys, and from that between that time period and
12 the end of June we received about 350 LEAs who
13 applied for our services. Those 350 LEAs were
14 actually representative of about 80 percent of the
15 total student population within those LEAs. The
16 vast majority numerically were small but all of the
17 large one applied as well, so that gives you some
18 sense of the dynamics there.

19 That totaled more than 33,000 schools and
20 212 million square feet of building space that was
21 requested for us to audit. From that number we've
22 actually audited about 1,258 of those schools for
23 108 LEAs, and that total is 12,653 buildings.

24 So there's still another 20,000 buildings
25 left from those original applications, which I'm not

1 saying are still valid, you know, in the sense that
2 they may have very well gone on and had somebody
3 else do the work or decided not to do the work, but
4 a large portion of them we still continue to get
5 requests for energy opportunity surveys coming in
6 literally every month, so the demand for the service
7 is still very substantial but we've turned most of
8 our resources toward the retrofit side which has a
9 very large demand cycle.

10 Next.

11 On the side of the energy efficiency
12 lighting retrofit installation, as I mentioned, we
13 do the labor for that, so an LEA can say to us,
14 okay, we have this. We use our Proposition 39 funds
15 to pay for the crews. The crews go to the LEA
16 location. The LEA is responsible for paying for
17 everything else, you know, like buying the retrofit
18 materials and getting whatever other supervision
19 requirements that they may have locally as well. We
20 then do the installation for those, and of course
21 that's a significant portion of the cost of doing
22 the retrofit, so therefore typically the LEAs, of
23 which we've done now about 79 of these projects,
24 these LEAs typically are using, that we've observed,
25 using the additional savings to buy more lighting

1 retrofits, because in many cases when you go to a
2 school campus the choice for their particular
3 budgeted funding opportunity would not cover the
4 entire campus, but so now in conjunction with the
5 CCC they can do many more and therefore get greater
6 savings and much more cost effective implementation.
7 And also, of course, it effects the quality of the
8 work environment.

9 Next.

10 So this is sort of the end of the
11 presentation.

12 One of the things we've found out is that
13 from a hiring standpoint, and this is not -- we do
14 have more detailed statistics on this, but these are
15 things that are self-reported, meaning the actual
16 corps members. We don't have a mechanism to
17 actually track the corps members after they leave
18 the CCC. I'm not suggesting that there isn't a way
19 to do that, but we don't currently track them. What
20 we do is we ask them and many of them, a large
21 percentage, will self-report that condition, like if
22 they graduate from our program or if they leave our
23 program early.

24 Now, as you'll see here, to date 49. And
25 these corps members all sign up for a one-year

1 period, so it's not like all of them would have
2 graduated right away. So 49 of the Energy Corps
3 members have actually gone to work directly and
4 self-reported as well as their employers have
5 directly reported this to us as well, joined energy
6 industry companies. Typically these are contractors
7 and ESCOs but in some cases they are utilities and
8 other entities, third party energy efficiency
9 companies.

10 We've had requests, another 52 Energy Corps
11 members have also left early, meaning been hired
12 away by companies that are in the supply chain for
13 the energy efficiency companies, and in some cases
14 not directly associated with them.

15 So it's a total of more than 100 of our
16 corps members that we've trained with Proposition 39
17 funds have been directly employed and measurably
18 employed. In many cases the compensation that
19 they're getting is very substantial by comparison to
20 the track that they might have been on at the time
21 that they joined the CCC.

22 We also have had very substantial requests
23 from individual companies to hire more corps
24 members. Like in some cases like in the northern
25 San Diego County we have two crews that work out of

1 the Vista Center, and we've had at least three
2 occasions now where those crews were -- I mean, we
3 were solicited to hire the entire two crews away at
4 one time. This is a very good thing, meaning it's
5 not what we want to do ultimately but we do want
6 them to find this kind of employment. And these are
7 from energy efficiency companies, so it's a perhaps
8 unscientific measure at the moment except for the
9 ones that are actually hired, but the trending
10 toward that in terms of like how long do CCC Energy
11 Corps members stay in the program before they are
12 hired out versus how many wait until the one year is
13 up and they graduate from the program. We have
14 quite a bit of data on that.

15 And the other thing is we've also been
16 recognized, the CCC's program has been recognized in
17 a number of ways, and one of the ways is that a
18 number of the contractors and ESCOs we worked with
19 have actually decided that they would pick somebody
20 from the CCC crew that works with them, or at least
21 onsite with them, and give them a scholarship to
22 community college or to a four-year school, or hire
23 them away directly, and that's what these photos at
24 the bottom are actually of the presentation of
25 awards. So we've gotten a number of award

1 recognitions for this. And the quality of the work
2 that we do has been, I think, vetted by many
3 entities that actually do this sort of work and held
4 to a pretty high standard.

5 And that's it for my presentation. Happy
6 to answer any questions.

7 CHAIR GORDON: Thank you. Questions from
8 the group. Walkie?

9 VICE CHAIR RAY: Yeah. Great, great
10 presentation.

11 How many young people pass through your
12 programs annually?

13 MR. McNAMARA: The collective CCC program,
14 all of it?

15 VICE CHAIR RAY: Yeah.

16 MR. McNAMARA: Okay. So we have on any
17 given day, at least for the last 18 months, we have
18 about 1,240 corps members, and the attrition rate of
19 that -- so the CCC is one of these organizations
20 that when the economy is not wonderful we have lots
21 of people who want to join. When the economy is
22 doing very well they tend to stay less time. So we
23 have probably about a 40 percent attrition rate per
24 year, measured against the full year wherein people
25 come to the CCC, they gain many skills and they put

1 those to good use, and during that time they have an
2 opportunity to find a full-time employment that's
3 not with the CCC and they go to that.

4 VICE CHAIR RAY: So maybe 7-800 young
5 people a year graduate or are in it long enough that
6 they are adept at analyzing energy management
7 issues.

8 MR. McNAMARA: This is the entire CCC.
9 Now, the Energy Corps has a higher rate of
10 retention, so we have a less separation rate,
11 meaning people leaving for not wonderful reasons,
12 but we have a higher rate of employed away, so the
13 Corps members will get somewhere between six and ten
14 months. The Energy Corps members become exposed to
15 many opportunities and they get solicited to be
16 hired away.

17 VICE CHAIR RAY: Where I'm going with this,
18 there is some number, 800, 600, 1000 people who are
19 suddenly trained and capable of becoming project
20 managers, property managers, plant engineers.
21 They're on a pathway into the middle class.

22 MR. McNAMARA: Yes. But I will have to
23 look at that again to give you a more realistic
24 number, but I would say that out of the -- at any
25 given time we have like 120 CCC Energy Corps corps

1 members, so from that number we would probably see
2 about 200 corps members would come in and cycle
3 through that population of intended population of
4 120 in a given year.

5 VICE CHAIR RAY: Okay.

6 MR. McNAMARA: So the target is 120 corps
7 members that are Energy Corps, and during the year
8 we would probably see up to 200 corps members join
9 and leave for some good reason or go to one of our
10 other crews.

11 VICE CHAIR RAY: You have corpsmen and
12 women other than energy.

13 MR. McNAMARA: Yes. Yeah, very
14 substantial.

15 VICE CHAIR RAY: I apologize.

16 MR. McNAMARA: We have 1,240 corps members
17 collectively, all of the CCC, 26 locations. Out of
18 that, the Energy Corps right now consists of 11
19 crews and staff, and 10 of those are Proposition 39
20 funded. So from that population we have about 120
21 corps members as the target annual population, and
22 then it cycles through probably 200 people cycle
23 through that annually.

24 VICE CHAIR RAY: I think it's wonderful
25 you're sending these messengers out and doing good

1 and training people to enter the middle class.

2 MR. McNAMARA: Exactly. And just one last
3 quick comment.

4 So a lot of these corps members were not on
5 a track to any particular thing, whether it was
6 college or career, and so the change for them is
7 rather profound.

8 CHAIR GORDON: On this point, and then
9 David, just on Slide 14, which is the slide where
10 you talk about the number of trainees, it might
11 actually be helpful -- you made the point verbally
12 that many of the people trained for retrofit
13 training had also already been trained for the
14 surveys, but on the slide it looks like they're
15 individuals because it totals the number of trainees
16 as if you have 1,505 but actually --

17 MR. McNAMARA: Yeah, I think the labeling
18 could be changed. Those are instances of training.

19 CHAIR GORDON: And we won't hold up
20 approval unless there's some other reason, but if
21 you could just address that and make that clearer, I
22 think that would be helpful.

23 MR. McNAMARA: I would be happy to do that.

24 CHAIR GORDON: David, did you have a...

25 BOARD MEMBER DIAS: Yeah, actually I was

1 going to ask about that.

2 How do you recruit? And that's another
3 question I had, and then I have one other one.

4 MR. McNAMARA: So the CCC has a cadre of
5 recruiters that are stationed throughout the state,
6 and so we recruit either online -- I mean, people
7 hear about us or they discover us online or somebody
8 recommends us. Word of mouth is the biggest single
9 point, recommendation by other young adults.

10 We also recruit directly into the Energy
11 Corps itself, so there's a general recruitment into
12 the CCC and then once you're in the CCC you might
13 actually want to be interested in energy. When you
14 found out that we did energy, you could say that you
15 wanted to do that and you could move into the Energy
16 Corps side.

17 But we also do direct recruiting now into
18 the Energy Corps, which is something we didn't do a
19 year ago, and so we go to trade fairs or we go to
20 community colleges or other places where they have
21 energy seminars or that sort of thing and we show up
22 and we talk about what we do and show all of this
23 information and invite people to come and see us,
24 etcetera, so we recruit in all those ways.

25 BOARD MEMBER DIAS: Great. And then the

1 other question. I was looking at the numbers of
2 trainees, which is actually it looks like it's that
3 many, you know, the total is either 1505 or 1805.

4 MR. McNAMARA: Yeah, a total of instances
5 of training.

6 BOARD MEMBER DIAS: Yeah, but it's under
7 the heading of training, so --

8 MR. McNAMARA: So I will adjust that.

9 BOARD MEMBER DIAS: Yeah, but then also the
10 hours, and I'm assuming that like if you go to
11 retrofit training, for example, you have 301
12 trainees that went through and then it had 24,000
13 hours, which is about 80 hours a person, I'm
14 assuming?

15 MR. McNAMARA: Right.

16 BOARD MEMBER DIAS: Okay.

17 MR. McNAMARA: Yeah, so the courses are
18 different lengths, and also it depends on, for
19 example, if somebody comes in with a certain
20 background, educational background, the CCC also has
21 a direct relationship with the John Muir Charter
22 School, so sometimes it takes a little longer, a
23 little less time, but it's a pretty standard length
24 of time for the surveys and the retrofit training.

25 BOARD MEMBER DIAS: Okay. Thank you.

1 MR. McNAMARA: Welcome.

2 CHAIR GORDON: I know Randall had a
3 question then we'll go to the phone.

4 BOARD MEMBER MARTINEZ: Thank you for the
5 presentation. I know that we're going to have a
6 presentation next by the California Workforce
7 Development Board, and I notice that they made a
8 grant to L.A. Trade Tech for a pre-apprentice
9 training program, and you mentioned L.A. Trade Tech
10 was one of your partners.

11 I'm curious if there's cross utilization.
12 Graduates from the pre-apprentice program, do they
13 end up in the CCC or vice versa?

14 MR. McNAMARA: So at the present time --
15 this brings a broader topic of organized labor too,
16 for example, to traditional apprenticeship programs.
17 And so we don't actually have a direct working
18 relationship with L.A. Trade Tech in that particular
19 regard. We do work with them. We've been talking
20 with them about certification of the training
21 programs we do and we've also talked to the
22 Community College Chancellor's Office and gone to
23 their meetings and presented to the people from all
24 the different campuses what services we have and how
25 they might make use of those services.

1 In those cases they would not be Prop 39
2 funded because our Prop 39 fund is targeted to K-12,
3 but on a reimbursement basis they might be
4 interested in having these kinds of services
5 performed or in which case they might use their Prop
6 39 allocation funds for that.

7 So we work with apprenticeship programs but
8 not in a formal basis. Historically the CCC has
9 done that but at the present time in the Energy
10 Corps we have not. We've talked to people, we have
11 presented those opportunities or worked with
12 organized labor and others to explore the
13 possibilities of having our program become like a
14 pre-apprenticeship program so that we could help
15 create a pathway for Energy Corps members to
16 organized labor.

17 Same thing is true for going to community
18 colleges. We're working with community colleges now
19 to develop a micro badging system which is kind of
20 an accreditation thing for the work that we're doing
21 and the work experience that the corps members have.

22 So there's still much to be done and a lot
23 of other opportunities as well.

24 BOARD MEMBER MARTINEZ: It seems to me that
25 if it is possible that a logical extension would be

1 for the Energy Corps to be recognized as a certified
2 pre-apprentice program with organized labor.

3 MR. McNAMARA: I certainly would agree with
4 that.

5 BOARD MEMBER MARTINEZ: Thank you.

6 CHAIR GORDON: Thanks, Randall.

7 On the phone, Arno, Chelina, Mark,
8 questions?

9 BOARD MEMBER GOLD: No questions, just
10 obviously very, very impressive, so thank you.

11 MR. McNAMARA: Thank you very much.

12 BOARD MEMBER HARRIS: Thank you.

13 CHAIR GORDON: Great. It sounds like no
14 other questions from the members. So again, with
15 the same caveats as before, looking for a motion to
16 approve the report for our use in our bigger report
17 with obviously small modifications, not needing
18 additional votes. Is anyone willing to make that
19 motion?

20 BOARD MEMBER MARTINEZ: Kate, I'd like to
21 make the motion perhaps with the understanding that
22 when we convene next and we talk about possible
23 recommendations that this group would make to the
24 Legislature, that we discuss the concept of what we
25 just discussed, the Energy Corps becoming a

1 certified pre-apprentice program.

2 CHAIR GORDON: Let's take that up at the
3 next meeting, but thank you, I will make a note of
4 that. Actually, you reminded me that I did have a
5 question, Bill, before we go to the motion, which is
6 you said earlier a couple times that 10 of your 11
7 groups are Prop 39 funded. What happens to you if
8 this program is not continued?

9 MR. McNAMARA: So in 2013 when I was called
10 on as a consultant to architect the Energy Corps,
11 there was no Prop 39, so it was meant to be a self-
12 funded reimbursement based program.

13 So what we do is, what we haven't talked
14 about today, which is appropriate, is all of the
15 other work that we are engaged in now with the
16 Department of General services and private entities
17 as well that is all about reimbursement based
18 contract work.

19 So we will, if Proposition 39 is extended
20 in some way, we will continue to put those funds to
21 good use. But if it isn't, we will create
22 reimbursement opportunities, which I'm already
23 doing.

24 CHAIR GORDON: Got it.

25 MR. McNAMARA: To take all of those 10

1 crews and more, which is what we're doing right now.

2 CHAIR GORDON: Great, thank you. Great.

3 So Randall, I have the note down for the next
4 meeting on recommendations, and thank you for the
5 answer to that question. Looking again for a motion
6 on this.

7 BOARD MEMBER MARTINEZ: So moved.

8 CHAIR GORDON: Thank you, Randall.

9 BOARD MEMBER DIAS: Second.

10 CHAIR GORDON: Second from David.

11 Roll call, please.

12 MR. BASTIDA: Board Member Gordon?

13 CHAIR GORDON: Yes.

14 MR. BASTIDA: Board Member Ray?

15 VICE CHAIR RAY: Yes.

16 MR. BASTIDA: Board Member Harris?

17 BOARD MEMBER HARRIS: Yes.

18 MR. BASTIDA: Board Member Odbert?

19 BOARD MEMBER ODBERT: (No audible
20 response.)

21 MR. BASTIDA: Board Member Martinez?

22 BOARD MEMBER MARTINEZ: Yes.

23 MR. BASTIDA: Board Member Dias?

24 BOARD MEMBER DIAS: Yes.

25 MR. BASTIDA: Board Member Gold?

1 BOARD MEMBER GOLD: Yes.

2 CHAIR GORDON: Chelina is an abstention,
3 right, because she's not here anymore?

4 MR. BASTIDA: Yes.

5 CHAIR GORDON: Thank you. Thank you, Bill,
6 for your presentation and for the program.

7 MR. McNAMARA: Pleasure.

8 CHAIR GORDON: And we will talk directly,
9 as I will with everybody, just about any small
10 modifications. Thank you.

11 MR. McNAMARA: Thank you for the
12 opportunity today. Have a good day.

13 CHAIR GORDON: You, too.

14 All right. Both Items 7 and 8 put Sarah
15 White on the hot seat here. The first will be the
16 presentation and the potential vote on the annual
17 report from the workforce development board and the
18 second will be on the jobs report specifically.

19 And hi, Sarah.

20 MS. WHITE: Hi.

21 CHAIR GORDON: Welcome.

22 MS. WHITE: We have some flashy handouts if
23 we could be so bold. They're a little bit better
24 than that. Could I just hand these out?

25 CHAIR GORDON: Great, thank you. I feel

1 like I should say you may approach the bench because
2 I feel like a judge up here.

3 MS. WHITE: Sort of, yeah. I was going to
4 vault over but trying to maintain some decorum.

5 So good afternoon, thanks for having the
6 state workforce board come in again to report on the
7 work that we're doing with and for all of you. We
8 have put our energy into producing two different
9 reports on two very different kinds of pieces of
10 this project, which we will walk you through. I
11 have a few slides but mostly wanted to give you the
12 highlights and let the written reports speak for
13 themselves. Answer any questions.

14 Oh, first of all, I'm Sarah White. I'm
15 Deputy Director at the California Workforce
16 development Board. I just wanted to flag for the
17 next conversation we would be happy to partner with
18 you in thinking through the role of pre-
19 apprenticeship, specifically in and outside of Prop
20 39 and there's a whole body of work that people fit
21 into in all kinds of different ways and different
22 organizations and we've done a lot of hard thinking
23 about that around the state, so we'd be happy to --
24 that was a great question and I think we have some
25 thoughts on that from lessons learned from this and

1 other work on that, so that's an ongoing
2 conversation which we'd be very interested in
3 participating in, but I'm not going to take us over
4 there today.

5 So I was struck as the earlier presenters
6 were talking how much a lot of this work is about
7 more broadly sharing the economic and the jobs
8 benefits of energy efficiency investments in
9 communities and in school districts around the
10 state, and the fact that we have for our training
11 programs we have just a tiny sliver of the Prop 39
12 money, about \$3 million a year, but with that we are
13 investing not in training programs but in
14 infrastructure, by which I mean we're not just
15 improving the capital of the built environment but
16 we're improving the skills infrastructure. We're
17 improving the human capital, and that's a huge piece
18 of this work. It's in the legislation in a variety
19 of ways and so I think when we talk about the
20 training that we're doing that's how we think of it,
21 as building a system of which pre-apprenticeship is
22 an enormous and important part.

23 Well, let's go on to the next slide, let's
24 talk a little bit about the goals.

25 So the pre-apprenticeship programs for Prop

1 39, as for most pre-apprenticeship programs, were
2 designed to reach underserved communities, at-risk
3 youths, veterans, women, low income, depending on
4 the trade and the area, a variety of barriers to
5 employment, and they really were designed
6 specifically to provide what you all have mentioned
7 earlier, which is specifically a career pathway to
8 family supporting jobs, middle class jobs in the
9 construction trades. We've talked about this
10 before, and we think that the best way to get there
11 is through training folks to enter into and be part
12 of formal apprenticeship programs. It is the way
13 that we guarantee wages, benefits, and quality of
14 work across the state and the way that this prepares
15 people not just for careers in energy efficiency but
16 for careers across the spectrum of energy
17 development.

18 So the other piece that I think is critical
19 to know about our Prop 39 pre-apprenticeship program
20 is that it's based on the multi-craft core
21 curriculum. Not going to go into great detail now,
22 we have talked about this a little bit before, but
23 what makes this different from other pre-
24 apprenticeship programs is that the multi-craft core
25 curriculum was developed nationally by the building

1 trades councils. Building and construction trades
2 came together and all the different trades -- brick
3 layers, ironworkers, plumbers, carpenters, laborers,
4 electricians, dozens and dozens of trades came
5 together and said --

6 Normally when you go into an apprenticeship
7 you have to pick a trade and go through. So what
8 the multi-craft core curriculum does is it says here
9 are the common skills that we need to go into any of
10 those trades. Let's take a bunch of folks, train
11 them with all of those common set of skills, and
12 then you're able to leap into any one of the trades
13 instead of going straight through a single silent
14 pathway. So it's a very unique thing that was
15 developed at a national level and has been piloted
16 in California over the past five years, but then
17 specifically is a piece of this training program.

18 So it's very unusual. It gives people the
19 opportunity to -- and one of the things we've seen
20 with pre-apprenticeship is so essential, and I will
21 come back to this at the end, is having actual
22 negotiated relationships with the building
23 construction trades, because you can train a lot of
24 folks up but if they don't have a place to go and
25 someone to hire them, then they're just trained,

1 right, and so we see this over and over again.

2 So the great thing about a strong pre-
3 apprenticeship is that it actually has a
4 relationship with the building trades. It doesn't
5 guarantee placement but it open a lot more doors.
6 And again, I will come back to that.

7 So we're excited about the multi-craft core
8 curriculum, which is an essential piece of this.

9 And the other thing to know about this work
10 is that we build partnerships. You mentioned L.A.
11 Trade Tech. And all of our different training
12 partnerships -- we have 13 of them now -- are based
13 on regional amalgamations of building trades
14 councils, community based organizations, workforce
15 development boards, community colleges, Conservation
16 Corps in some cases, and they all work together and
17 they often provide different things.

18 There's no one person that does everything
19 well, so you'll find one person does the training.
20 One group might be the best at the recruiting.
21 Another group's going to provide the sort of
22 supportive services so that folks can actually
23 succeed and make it through. So there isn't any one
24 organization we find does all of those things, but
25 partners come together in different regions to do

1 that together. It's a holistic approach.

2 So we have just released the (inaudible)
3 report that we also sent around to you, I think this
4 morning, talking about what's happened just in the
5 last year with these programs. So if you want to go
6 ahead a slide, I don't want to go into great detail
7 here but I should just mention we have two cohorts
8 of grantees.

9 The 1.0, as we call them, are six programs
10 that we first launched in 2014. We have given them
11 extended funding. We would like to see them get not
12 just up to speed but continue refining the lessons
13 that we learned in those pilots, and they are
14 continuing to serve people, so we have six of the
15 1.0 grantees who we gave additional money to this
16 year to continue.

17 And then if we go to the next slide, these
18 are the new, the 2.0 grantees. We're missing one
19 there, I just have four. The fifth one there is the
20 San Diego Urban Corps, so there are five new of
21 these training implementation grants.

22 In addition, we have two development
23 grants, which is a smaller allotment which gets
24 partnerships together to figure out what they want
25 to do. It gives them six months to come together

1 and say, you know, you can't just build something
2 from whole cloth. What's it going to look like?
3 Who's going to do what? So these are the
4 development grants. And in the first term we had
5 development grants that are now funded as full
6 training grants.

7 And then we have, as we had in the
8 beginning, a technical assistance and capacity
9 building from the California Labor Federation, their
10 workforce and economic development initiative
11 provides technical assistance on the ground.

12 These are very hard things to do. pre-
13 apprenticeship is not for the faint of heart, and so
14 the folks at WED work with each partnership on the
15 ground to make sure that the partnerships are going,
16 that everyone's talking to each other and that
17 people are being served, and they can troubleshoot
18 in the moment whatever the problems are.

19 We also have a community practice where we
20 bring together all the grantees four times a year to
21 learn from one another. They are pilots. They're
22 all the same goals although they serve different
23 groups of people.

24 And then we also have this year an
25 investment in capacity building with the East Bay

1 Alliance for Sustainable Economy e-base who is
2 looking into how community organizations and
3 building trades work together to develop community
4 workforce agreements, which are the way we get the
5 demand side of this equation going.

6 In other words, what that means is that if
7 you're going to do a big public infrastructure
8 project or a small one, it could be a school, it
9 could be a stadium, that there's a way to write into
10 the program of that a way that benefits communities,
11 like a community benefits agreement that guarantees
12 that some of the investments will be reaped locally.

13 And it also guarantees a certain amount of
14 local hire, so one of the ways you make sure that
15 there are placement opportunities is that you write
16 into the contract that people have to hire a certain
17 number of people locally, a certain number of zip
18 codes. It's a standard practice but hard to do.
19 With all the partners in the room it's threading a
20 needle, so we have some experts in doing that going
21 around the state to work with regional partnerships
22 to suggest how they might get involved upstream on
23 this.

24 So those are our investments right now, so
25 that's about \$5 million just for this year.

1 And if you want to go to the next slide.

2 Well, this is just repeating the alphabet
3 soup which I just told you again, the kinds of
4 partners, the workforce development board, the
5 building trade council, the joint apprenticeship
6 training committees, community based organizations,
7 the community colleges, the Conservation Corps, and
8 others. So getting these folks together into a
9 single unit to figure out how to best serve groups
10 of people and feed them into the construction trades
11 is the challenge of this work.

12 And I should say that we -- and we
13 explained this before but it's worth saying again,
14 that the vision of the Board's Prop 39 training
15 investments is that the best way to get
16 disadvantages communities into pathways to the
17 middle class, working on school projects or others
18 is to get them into apprenticeships, which is a
19 three- to five-year training program in the building
20 trades.

21 So there's not a guarantee that these folks
22 are going to go in and tomorrow be working on the
23 school. In fact, they wouldn't have had time for
24 that training.

25 The pre-apprenticeship is just to get folks

1 up to the level where they pass the reading and the
2 math and the tools and the other kinds of skills
3 necessary to get into an apprenticeship. Then the
4 apprenticeship itself is three to five years.
5 During the course of this we're learning energy
6 efficiency skills to be used on these and many other
7 projects, but the point is to build the pathway and
8 the pipeline, right, rather than giving people a
9 narrow set of skills to do a single job at a single
10 site but to give them a lifetime career doing this
11 kind of work.

12 CHAIR GORDON: Sarah, I'm sorry.

13 MS. WHITE: Yes.

14 CHAIR GORDON: And I know Bill's not here
15 anymore, unfortunately. So you just made an
16 important point about the three years, the long term
17 of the apprenticeship, and obviously they're paid
18 while they're in the program, right?

19 MS. WHITE: Yes.

20 CHAIR GORDON: So do you have any sense at
21 all of the kind of different outcomes of coming out
22 of that type of an apprenticeship program and going
23 into the trades in terms of pay, benefits, whatever,
24 you know, the quality of the job, versus people who
25 kind of go through the pathway you just talked

1 about, which is more of a single set of skills or
2 take a community college course, which is not a bad
3 thing but let's just say versus another pathway.

4 MS. WHITE: Right. I mean, right, there's
5 many ways up and in and through. I think that we
6 will get to that in actually we talk about the jobs
7 report, that's where we address some of the job
8 quality issues.

9 I mean, this is the place where you find
10 the data that we have are good. If you take the
11 time to go into an apprenticeship, apprenticeship is
12 the gold standard of earn and learn training
13 programs. We find that they have the highest wages,
14 that they have the best job retention. It's
15 actually a negotiated agreement between employers,
16 labor, and workers, so that people understand
17 there's a training progression.

18 You start out making a little money. As
19 you gain skills, you gain income, and you get an
20 industry certified credential.

21 The same is true for the pre-
22 apprenticeship, this is a gateway into those
23 training paths.

24 The labor market data that we have shows
25 that the highest quality jobs and the only guarantee

1 of the quality of job is in the apprenticeship
2 programs where possible.

3 CHAIR GORDON: David, of course go ahead.

4 BOARD MEMBER DIAS: I see you have the
5 grantees, what is it, seven or eight or whatever it
6 is. Did you open it up to more throughout
7 California or is that just what you picked, or how
8 did it just come to them?

9 MS. WHITE: We had an open request for
10 applications that was a procured competitive
11 process. The first round of grantees there were six
12 of them, six training and implementation as well as
13 two development and some technical assistance.

14 We did a second round last year that
15 reopened it, and that's where we got the seven new
16 projects. The five grantees, the two development
17 and the two others. So they were both open and
18 competitive processes.

19 BOARD MEMBER DIAS: Good.

20 MS. WHITE: What we'd like to see, because
21 as you can imagine, building these kinds of
22 partnerships takes a fair amount of investment,
23 time, money, resources, and they've been able to run
24 cohorts through pretty quickly, which is amazing,
25 but we want them to really build and thrive, so at

1 the end of the first round they were just up and
2 staring to run, and so we invested in them for a
3 second year based on performance criteria.

4 BOARD MEMBER DIAS: Are you going to open
5 it up for more later?

6 MS. WHITE: To talk about the future a
7 little bit, because we only have funding through
8 2018 we didn't feel that there was room for another
9 round of that. What we were hoping to do is we have
10 set aside funds, we do have an investment plan so
11 that if performance is satisfactory with the new
12 rounds we would have enough money to raise the
13 development grants this year into full training and
14 implementation grants, let them run through the end
15 of 2018, as well as investing in the five that have
16 just started last summer and let them run through
17 the end of 2018 so that we have various grantees in
18 various stages of development, but that's what we
19 think.

20 We did not think there was enough time in
21 one year to get these things up and going and done,
22 so that's with the amount of money that we have,
23 which is also a limited amount of money, that's
24 where we have budgeted it.

25 We do have other funding coming in from

1 other sources where we are considering doing a
2 different kind of open RFA but I can talk about
3 that.

4 BOARD MEMBER DIAS: Thank you.

5 MS. WHITE: Sure.

6 CHAIR GORDON: Did someone on the phone
7 have a question? We just heard a little bit of
8 feedback, wondering if someone was trying to break
9 in.

10 BOARD MEMBER HARRIS: Not me.

11 CHAIR GORDON: Okay.

12 MS. WHITE: Can we go ahead?

13 CHAIR GORDON: It wasn't Arno, great.

14 Good, go ahead, Sarah.

15 MS. WHITE: Just keep running the slides
16 because I'm not even sure where we are now.

17 Oh, we'll just jump in here, performance.

18 I just wanted to note that -- you talked
19 about -- you've asked a number of times about
20 placement. So tracking placement is very difficult
21 to do but something that we are committed to do as
22 part of this program.

23 What was negotiated at the beginning is
24 that the performance schools track a variety of
25 kinds of placement, what counts, and this is

1 consistent with the standard for workforce programs
2 around the country, so a number of things.

3 Getting an industry valued credential, very
4 important. We measure that by somebody who goes
5 through. This means that when you go through a
6 training program you come out with a piece of paper
7 that tells employers and schools this is what I
8 know. This is legit. I have a certificate. I have
9 a credential. It means something. It's not just I
10 went to, you know, I went to the corner and got some
11 skills, right, or I learned it in my basement. It
12 means that this is a valued credential.

13 The MC3 certificate which folks get for
14 going through this program is exactly that, so that
15 any employer or any school looking to admit or hire
16 folks knows exactly what they did to earn that
17 degree. So we count earning an industry valued
18 credential as an important benchmark.

19 Also, there's a number of other placement
20 outcomes.

21 Placement into state certified
22 apprenticeship, again, the gold standard.

23 Placement in continuing education, because
24 we think that going back into full secondary
25 education for a longer career, obviously a great

1 outcome.

2 Placement in construction or energy
3 efficiency employment. Apprenticeships, you only
4 have an apprenticeship if there is a job. I sort of
5 want to make this point that apprenticeship is not a
6 system where you simply run through a pre-
7 apprenticeship training program, then you get placed
8 in an apprenticeship. There's only enough
9 apprenticeships for how many jobs there are, so when
10 there are jobs open they will hire on apprentices.
11 Usually we've found for this work it's a ratio of 20
12 percent, so about one apprentice to every five or
13 four workers, journey level workers for the training
14 purposes because they are earning as they're
15 learning, right, so they're learning on the job as
16 well as in classroom instruction.

17 So this program, the Prop 39 program is
18 just to get people up to the level to get into these
19 apprenticeship programs.

20 So in the meantime, until an apprenticeship
21 slot opens or somebody decides that's not the career
22 for them, getting a job in energy efficiency
23 employment, even if it's not a formal
24 apprenticeship, counts as a win, right, like that's
25 a good thing. We want people to get employed.

1 We find that our placement numbers, in
2 fact, that's why we call it a snapshot, they are
3 constantly moving because folks graduate from one of
4 these pre-apprenticeship programs. They might work
5 as a helper for three months, or they might work on
6 a site for two months before they get accepted into
7 an apprenticeship program, so it's not just a
8 straight pathway through. So the placement numbers
9 vary as people move through their careers.

10 And once we have a solid dataset and are
11 able to track these folks into the labor market, we
12 will be able to measure their retention in
13 apprenticeship as well as their income increase, and
14 this is critical.

15 Again, apprenticeship is a long process and
16 one of the things we find particularly with policies
17 with barriers to employment is that the retention
18 rates are not great in apprenticeship. It's very
19 difficult. Very high levels of reading and math.
20 Very hard physical labor. You know, these are
21 really tough jobs, and so folks wash out of them a
22 lot, so one of the things we do with pre-
23 apprenticeship is try to make sure that people are
24 prepared and ready and know what they're going into.

25 And then one of the things is to show that

1 this actually going through pre-apprenticeship
2 actually helps them stay and persist through
3 apprenticeship because apprenticeship persistent
4 rates are really pretty low all over the country,
5 and especially for women and people of color.

6 So these are some of the performance goals,
7 I'll give you a quick performance snapshot.

8 I think the thing to take away here, these
9 are percentages which are an update of what we gave
10 you last year. This is based only on the first six
11 projects because they have completed more than a
12 year. The second round that we talked about those
13 grantees, we'll have data for them this summer when
14 they're done with their first year.

15 So this cumulative data for the first two
16 years of these six projects ending December of last
17 year. The percentages are actually really
18 remarkable. To have a 78 percent placement rate is
19 pretty much unheard of in the world of workforce
20 development, we're tremendously excited about that.

21 The actual numbers, if you want the raw
22 numbers, are people we've trained, I think we've
23 enrolled a little over 1000 folks and somewhere
24 close to 600 have already been placed into jobs.
25 Again, a really, really high number.

1 There are lots of ways in here between
2 enrolling and then surviving through the program and
3 thriving in it and graduating and then moving on
4 into a job, to have placed 600 people in the course
5 of two years with a new program is pretty remarkable
6 and we're pretty excited about that.

7 So we want to move on to the last slide.

8 Yeah, so this is just, again, coming back
9 to these lessons which I actually started out with
10 because of some of the questions.

11 We found that active involvement with the
12 building trades is really critical, so our
13 partnerships are all different. Some of them, as I
14 said, are led by workforce development boards, some
15 of them are led by community based organizations.
16 We have one, San Francisco, that is led by
17 Conservation Corps actually, and we have some that
18 are led and run by the building trades, and they all
19 have different strengths but we find that the best
20 indicator for placement and for success in the
21 program is whether or not the partnerships, whoever
22 is leading it has worked closely with the building
23 trades.

24 And part of the program is not simply
25 learning math and learning how to use tools, right?

1 It's also learning about what all the different
2 trades offer. What is that career like? What is
3 that job like? Are you interested? Would you be
4 good at it? Going out and actually living it. So
5 if you have an opportunity to go out doing practice
6 interviews for getting into an apprenticeship.

7 So when we say having a relationship with
8 the building trades it's like having a relationship
9 with your employer, right? This is the connection
10 that you're going to need coming out of this
11 training program.

12 Otherwise people are just, you know, this
13 is how we've always done education in America,
14 right? You get a degree and you're released into
15 the wild. It doesn't really work like that anymore
16 in our labor markets, right? So these folks we need
17 to make sure there's connections to the
18 apprenticeship slots that are opening in the
19 building trades. That's why these relationships are
20 so important.

21 Again, making the emphasis that placement
22 into registered apprenticeship is not guaranteed.
23 No pre-apprenticeship program guarantees placement
24 into apprenticeship, and you have to be very clear
25 about that up front, because think again it's like,

1 well, okay, I got that certificate, now I should be
2 able to go and get my apprenticeship, but it doesn't
3 work like that.

4 You're setting people up for success. The
5 problem is that disadvantages populations have a
6 very hard time getting into apprenticeships at all
7 for a variety of reasons. Pre-apprenticeship is to
8 help broker that relationship so the doors are open
9 to the building trades and also so that the
10 requisite skills are learned ahead of time, and the
11 supportive services are provided.

12 And the other piece we haven't gone into
13 detail about but the successful program provides
14 more than just a curriculum, so all kinds of things
15 that in our report there are little snapshots of
16 each of the original six. All kinds of supportive
17 services are required.

18 First of all, once people get into an
19 apprenticeship, help with child care,
20 transportation, continuing education. But even for
21 the pre-apprenticeship there is a large case
22 management position. We've found some of our most
23 successful programs have run students through as a
24 cohort. There is an all women's cohort, for
25 example, through Rising Sun that these women sort of

1 provide a formal peer support member to one another
2 so that all of them made it through to graduation.
3 The kind of peer support that applicants provide one
4 another while going through the pre-apprenticeship
5 is incredibly important to persistence throughout
6 and to graduation.

7 Also things like you have to have a
8 driver's license. Many people do not have a valid
9 driver's license for a variety of reasons, and it
10 could be because of prior offenses, it could be
11 because you need to get your license back, but one
12 of the things that supportive services do, ticket
13 amnesty. They help people clear their driver's
14 license because you can't get a job. You could
15 graduate from pre-apprenticeship but if you don't
16 have a driver's license you will never get a job, so
17 helping people get their driver's license is one of
18 the best things a training program could do, right.

19 And the same thing with record expungement
20 for ex-offenders. We are serving increasingly a
21 reentry population through these channels, and those
22 are folks also who need help getting their paperwork
23 cleared to be able to work in construction.

24 So those are the kinds of things that we've
25 learned, so I think it's just always guiding people

1 back to this idea that you think it's just a
2 training program, but it's really a whole suite of
3 services to help people get to the equal level of
4 opportunity that other folks have had all along.

5 So I think I'll stop with that. We still
6 have to talk about jobs, so open to questions.

7 CHAIR GORDON: We'll do questions and a
8 motion on this one, we'll split these in two.

9 Yes, David.

10 BOARD MEMBER DIAS: I'd like to thank you
11 for this. This is a great thing. I'm a sheet metal
12 worker, I went through the apprenticeship and did
13 all the stuff, and I'm a former instructor and sit
14 on the JVC.

15 MS. WHITE: So you know.

16 BOARD MEMBER DIAS: So I know all this
17 stuff, but most trades do have through the building
18 trades have direct entry programs and we do bring
19 people in directly through the pre-apprenticeship
20 program, so I don't know if everybody opens up to
21 that or not but that's a way to get them directly
22 in. It's only a percentage through the state of
23 California maximum is 25 percent and that's
24 including veterans, so you have to go through all
25 those regulations.

1 And yes, you do have to, a person has to
2 have a driver's license and pass the math test and
3 all that. Otherwise, they will not get in.

4 MS. WHITE: Yeah.

5 BOARD MEMBER DIAS: I know that.

6 MS. WHITE: Yeah. And I think there's a
7 variety of ways that the individual partnerships
8 have negotiated those entries, it's not always
9 direct entry. In other words, that you
10 automatically get to be an apprentice.

11 What it is is they'll have a guaranteed
12 interview, right? So let's say you graduate with an
13 MC3 certificate, the trades at that local area have
14 agreed that you will get an interview to be an
15 apprentice or that you will get certain points, you
16 can move higher on the list. There's all kinds of
17 ways that this can be turned into an advantage in
18 those competitions for the apprenticeship slot.

19 BOARD MEMBER DIAS: But thank you.

20 MS. WHITE: No, thank you.

21 CHAIR GORDON: Other questions, comments?
22 On the phone? Room? So let's do a motion on --

23 First of all, thank you. It's a great
24 presentation and a really impressive numbers, I'm
25 amazed at the 600 number, actually, that's shocking

1 and really impressive.

2 MS. WHITE: Right.

3 CHAIR GORDON: Can we get a motion on this
4 report? We're going to do Sarah's second report on
5 the larger job numbers for the whole program, but
6 can we get a motion on this part?

7 VICE CHAIR RAY: So moved.

8 CHAIR GORDON: Thank you.

9 BOARD MEMBER DIAS: Second.

10 CHAIR GORDON: Second. Roll call please.

11 MR. BASTIDA: Board Member Gordon?

12 CHAIR GORDON: Yes.

13 MR. BASTIDA: Board Member Ray?

14 VICE CHAIR RAY: Yes.

15 MR. BASTIDA: Board Member Harris?

16 BOARD MEMBER HARRIS: Yes.

17 MR. BASTIDA: Board Member Odbert, I
18 believe you are back?

19 BOARD MEMBER ODBERT: Yes.

20 MR. BASTIDA: Board Member Martinez?

21 BOARD MEMBER MARTINEZ: Yes.

22 MR. BASTIDA: Board Member Dias?

23 BOARD MEMBER DIAS: Yes.

24 MR. BASTIDA: Board Member Gold?

25 BOARD MEMBER GOLD: Yes.

1 CHAIR GORDON: Did we lose Mark?

2 MR. BASTIDA: Board Member Gold, are you
3 there?

4 CHAIR GORDON: All right, we have lost
5 another one off the phone, so that'll be an
6 abstention, thank you. Oh, are you back?

7 MR. BASTIDA: There he is. Board Member
8 Gold?

9 BOARD MEMBER GOLD: That's weird, I was
10 talking the whole time but it didn't come through,
11 sorry about that, weird.

12 CHAIR GORDON: What's your vote, Mark?

13 BOARD MEMBER GOLD: It was a yes.

14 CHAIR GORDON: Thank you. Great, thank
15 you. So we have moved on that report.

16 We now get to go to the harder report from
17 the Workforce Development Board. You got to do all
18 your good success stories and now you have to do the
19 hard data report.

20 MS. WHITE: Right.

21 CHAIR GORDON: Which is the jobs report on
22 the full program. Go ahead, Sarah.

23 MS. WHITE: That's fine.

24 Let me say also just thank you for
25 listening to a slightly rambling report about the

1 projects. There was so much to share that it's hard
2 to know which are the highest level points to bring
3 up for you. I encourage you to read through the
4 case studies in the reports. And also, we'd be
5 happy to put you in touch with -- there's lots of --
6 it feels like there's a graduation happening every
7 month, right, and it's a really incredible thing to
8 go out to these sites and visit people who have made
9 it through and who are now interviewing to have
10 these careers, these high wage careers in
11 occupations that they never dreamed they'd be able
12 to, and it's incredibly moving thing. The peoples'
13 stories are fabulous as well as I talk about
14 building skill systems because where systems change,
15 that's what we do at the state board, but there's a
16 lot of really human stories here too which are
17 really great.

18 But we also want to talk to you about the
19 jobs data behind this, so I have a lot of paper
20 here. I'm going to keep it relatively short and
21 sweet.

22 Again, I came and talked to you last year
23 about the methodology that we would use. The kinds
24 of jobs and how it was hard to count them and how we
25 planned to count them, and there was a lot of room

1 for sort of fun swirling presentations in that. Now
2 we just have the numbers from the labor (inaudible)
3 and just give you the straight numbers.

4 But I should say that -- make the caveat
5 again that I am not a labor economist. We have
6 worked closely with our colleagues at the University
7 of California at Berkeley who also hired onto this
8 project a nationally known construction economist
9 because this is very thorny difficult data issues to
10 get through, so we have some of the best folks in
11 the country looking at this data.

12 I am here to report their results. I
13 cannot draw them for you if you have questions about
14 the methodology. We included a pretty lengthy
15 methodology note in the report about how we arrived
16 at these numbers, but what we're trying to do is
17 give the big picture and a little explanation of
18 what that contains.

19 And also I should say that we're hoping to
20 do is to give it to the CEC or we can post on our
21 website something that's more like a chart book,
22 right, that just shows here's the six big things
23 that you need to know about this and then a little
24 bit of text. Kind of the reverse of the report. We
25 have tiny little charts and lots of text. We just

1 want to move it into kind of an online thing that
2 people can just click through and understand and we
3 think that's sort of the best way to transmit this
4 information, so we're on our way there.

5 But I think, again, to say that Prop 39, as
6 you know, is an investment in the clean energy
7 workforce intended to also increase the number of
8 jobs in California supporting energy retrofit
9 improvements while providing training in sustainable
10 careers for all Californians. And I think that the
11 data that we have addresses both of these questions.
12 Both how many jobs were created and what the quality
13 is.

14 So the big takeaway, let me say, is that
15 the job creation is on a really decent par with what
16 we predicted, there are no surprising things to
17 know. We have no rabbits to pull out of a hat. We
18 are on track with the mid range forecasts that were
19 run by UC Berkeley last year and the year before.
20 And the quality indicators which we have are really
21 pretty great, right, so they speak directly to this
22 goal of creating quality jobs that provide middle
23 class careers, which was one of the goals of this.

24 So if we want to move to the first slide.
25 I should remind folks that we are taking

1 the job measures only for the K-12 investments,
2 which are the vast majority of the Prop 39
3 investments, but the job creation numbers by the
4 investments to the community colleges and the
5 Conservation Corps are tracked separately by those
6 folks, so this is the K-12 job creation numbers and
7 these numbers are for your purposes they go through
8 the third quarter of last year and it's based on the
9 amount of approved money out the door for these
10 projects, right, so that's \$752 million when
11 adjusted to 2016 dollars.

12 So the job estimates are based on this
13 disbursement rather than the final program
14 expenditures because, as you've heard this morning
15 I'm sure, the LEAs do not have to report until a
16 full year after their projects.

17 And there's been a lot of discussion in our
18 data about what means a completed project, so we're
19 basing the job numbers on the amount of money that
20 has gone out and been approved for these.

21 So with that, because I mean, if you
22 actually -- I think when we looked in the fall at
23 the CEC data there were only 60 projects that had
24 actually been considered completed and measurable,
25 so we are basing this on the money that went out the

1 door before the third quarter, and from that we find
2 that California has created over 10,000 brand new
3 jobs.

4 These are broken into about 4400 direct
5 jobs, which are actually the direct construction
6 industry jobs.

7 The indirect and induced jobs which you see
8 here are the kinds of work that are created in an
9 economy when construction happens, right. Sort of
10 the indirect jobs are those in the supply chain and
11 the induced jobs are because people now have money
12 in their pockets to spend in their communities.

13 The reason this is important and especially
14 in Prop 39 is because the legislation was used to
15 close a tax loophole. This is entirely new money,
16 it's not just moving things around in the economy so
17 these jobs would have been somewhere else and now
18 they're coming here. They're considered brand new
19 by the economists because it's new money coming in.

20 So 10,000 jobs. That's, again, sort of
21 about the middle of the range estimates that we had
22 before.

23 I would also just like to add to this. I
24 didn't put in a slide here but there is a notation
25 in the report we also had Berkeley run us some of

1 the economic impact numbers overall, which said that
2 in addition to the employment that is generated on
3 this spending that was generated, so we have \$587
4 million in induced spending and \$361 million in
5 indirect spending for the total economic impact of
6 \$1.7 billion from this work alone.

7 And this increase in economic activity they
8 calculated generates an additional \$88 million in
9 state and local property taxes. So we feel the
10 economic outcomes of the investments to date to
11 retrofit schools have been a tremendous boon to the
12 California economy, so that is good news.

13 Let me move ahead.

14 This is a detail which actually has gotten
15 moved up here, it's in the appendix. This is just
16 to answer this question of where are most of the
17 construction jobs. There was concern in the
18 beginning that it went to a lot of consultants or
19 managers, and actually only 2 percent went to the
20 energy managers or the jobs in training, but
21 actually the majority of the jobs, 98 percent of the
22 jobs were in direct construction activities.

23 So if you want to move ahead.

24 This takes us to a couple slides where we
25 talk about the story of job quality. These next two

1 just talk about the main job classifications.
2 Again, what are people doing when they do energy
3 retrofits, right? So this is where we have direct
4 data from the Department of Industrial Relations,
5 from the certified payroll records, and it tells us
6 some things about quality.

7 We know that in the sample that we have
8 there's an importance of highly skills specialty
9 trades, so the electricians, the plumbers and
10 pipefitters, the sheet metal workers working on two
11 of the energy using systems in building, lighting
12 and HVAC.

13 So the prominence of trades also that work
14 on the building envelope is (inaudible).

15 Why don't we go to the next slide.

16 This is another way of breaking this down
17 because this is just showing the amount of highly
18 skilled labor on these projects and where the work
19 is being done with the investments that were made.

20 If you want to leap ahead.

21 This slide is probably the most important,
22 I think, in terms of job quality because it shows
23 what I mentioned earlier, which is that 18 percent
24 apprenticeship utilization rate. So that means that
25 80 percent of the jobs are high quality journey

1 level or other trained construction jobs, which is
2 great news.

3 Only 1 percent are occupations that didn't
4 require any formal training. Those are things like,
5 in these cases, not in all cases, in some cases the
6 lighting contractors who came in, if there were
7 people that were being taught how to change lights,
8 and also landscapers that came in to redo grounds
9 after the work was done.

10 But the vast majority are in journey level
11 occupations, and with 20 percent room for
12 apprentices. Again, that shows us a ratio of about
13 1 trainee to 5 workers, which is incredibly good,
14 that's healthy, that's what we see across the
15 country in solid construction projects.

16 It also means that there's room for a lot
17 of apprentices to come into this work, and if we hop
18 ahead.

19 Let me just back up for a second.

20 Kate, you had said, I should say this
21 earlier, I just want to remind folks that
22 apprentices are earning a salary while they're
23 getting three to five years of training that teaches
24 a broad occupational skill set so they can be
25 employed across the board in the construction

1 industry. And the state certified apprenticeships
2 are really the gold standard in workforce training,
3 and these are the pipelines for a middle class
4 career and we're very excited to see that there's
5 room for 20 percent. So far we have seen the data
6 that 20 percent of the workers are apprentices.

7 If you move ahead, another way that we
8 document the importance of apprentices is by showing
9 the average hourly wage rate for apprenticeships in
10 the selected trades on these projects. And I think
11 you will see that these are not terrible wages,
12 right? We're talking about people making a living
13 that they could support a family on. This is not
14 about the low wage dead-end kinds of careers, these
15 are kinds of jobs we want to be trained for. This
16 is why we emphasize the importance of moving into
17 apprenticeship because if you're an apprentice
18 you're going to be making these kinds of wages.

19 These jobs are also, by and large they pay
20 dental and health and retirement benefits, and the
21 wages, again, high.

22 I think the only other thing -- is there
23 another slide?

24 MR. BASTIDA: That's all we have.

25 MS. WHITE: Oh, look at that.

1 I think the other thing I just want to draw
2 your attention to is the sampling that we did.

3 So we had talked about building a data
4 system where we could measure the jobs from the
5 direct payroll records. There has still been an
6 ongoing challenge in matching the CEC records and
7 the payroll records, so while we're able to use the
8 DIR data and it is good to get at the job quality
9 issues, to look at average wages and to look at
10 benefits and apprenticeship utilization, the actual
11 job numbers are modeled based on an in-plan modeling
12 which is specific to the California construction
13 industry based on the inputs that have been spent by
14 CEC so far, so that's where we get our job data
15 number up front.

16 This is a nationally accepted form of
17 modeling which is then ground truth, if you will, by
18 the information we have from DIR about the nature of
19 the jobs themselves. And then again, the modeling
20 is applied specifically to the case of California
21 and California's economy and the construction trades
22 involved in doing this work.

23 So that's the sort of great --

24 CHAIR GORDON: Great.

25 MS. WHITE: -- good, slightly anticlimactic

1 end of the day, but happy to say that we're seeing
2 not just tremendous growth in skills infrastructure,
3 but I think really solid job creation numbers as
4 well.

5 CHAIR GORDON: Thank you, Sarah, you did
6 such a good job last year of setting us up for not
7 having good numbers that now that we get really good
8 numbers it's especially great, so really appreciate
9 it.

10 MS. WHITE: Yes, they're good. They're
11 solid numbers. I would say we are still going to
12 get the short of, you know, some folks hope to see
13 40,000 and some folks -- but 10,000 jobs is a good
14 number.

15 CHAIR GORDON: It's great, and thank you.
16 It's as always a very clear presentation.

17 MS. WHITE: And again, the quality again,
18 as I said, is very important because there's a lot
19 of ways to create crappy jobs. We don't want those.

20 CHAIR GORDON: Questions for Sarah on the
21 jobs data, or comments? Arno, Chelina --

22 BOARD MEMBER HARRIS: None. None for me.
23 That was great, thank you.

24 BOARD MEMBER ODBERT: No. Just also happy
25 to see the numbers.

1 CHAIR GORDON: Mark, you weren't here last
2 year but Sarah was very discouraging about what she
3 thought she would be able to provide to us in terms
4 of numbers, so I think you're experiencing us being
5 happy not only about the numbers but about the
6 ability to get some of the numbers.

7 MS. WHITE: Right.

8 CHAIR GORDON: It's really great.

9 BOARD MEMBER GOLD: Also sounds like it was
10 very strategic.

11 CHAIR GORDON: Yes. Well, thank you.

12 Let's have a motion on this report, which I
13 think is our last motion of the day, and then we'll
14 do public comment afterwards, which we have not yet
15 done. So motion on this report?

16 BOARD MEMBER DIAS: Move to accept the
17 report.

18 CHAIR GORDON: Great.

19 BOARD MEMBER MARTINEZ: Second.

20 CHAIR GORDON: That was David and then
21 Randall seconding.

22 Roll call, please.

23 MR. BASTIDA: All right.

24 Board Member Gordon?

25 CHAIR GORDON: Yes.

1 MR. BASTIDA: Board Member Ray?
2 VICE CHAIR RAY: Yes.
3 MR. BASTIDA: Board Member Harris?
4 BOARD MEMBER HARRIS: Yes.
5 MR. BASTIDA: Board Member Odbert?
6 BOARD MEMBER ODBERT: Yes.
7 MR. BASTIDA: Board Member Martinez?
8 BOARD MEMBER MARTINEZ: Yes.
9 MR. BASTIDA: Board Member Dias?
10 BOARD MEMBER DIAS: Yes.
11 MR. BASTIDA: Board Member Gold?
12 BOARD MEMBER GOLD: Yes.
13 CHAIR GORDON: Great. Thank you.
14 MR. BASTIDA: The motion is passed.
15 CHAIR GORDON: That was that. So we will
16 take that report and the others that we voted on
17 today and use them as the basis for our report to
18 the Legislature.

19 Again, as with all of those motions, I
20 probably and Jack will be reaching out individually
21 to the different departments if we have specific
22 questions on presentation or tweaking, making sure
23 that we are not talking about the incentive-owned
24 utilities, etcetera. But thank you to everybody who
25 presented who's still here.

1 Do we have any public comment, since we
2 didn't call for it during the items, on any item on
3 the agenda?

4 Seeing none --

5 MR. BASTIDA: There might be online.

6 CHAIR GORDON: Oh, there might be on the
7 phone. Is there any public comment or question on
8 anything on the agenda or on our board in general on
9 the phone, since this is an open line?

10 MR. BROWN: Yes.

11 CHAIR GORDON: Great.

12 MR. BROWN: Yeah, hi, this is Rick Brown
13 from Terra Verde. As many of you know, we're
14 involved in (inaudible) with a lot of districts,
15 over 50 now, and as we discussed last year where
16 there was some concerns about the progress, last
17 summary, you know, kicked it in terms of a lot of
18 construction, and we all know why there were those
19 delays. And this summer is going to be, you know,
20 similar if not more. So that's the good news.

21 I did want to comment quickly on the
22 charter issue, because I think in listening to the
23 discussion there's still a little unclarity.

24 The problem with independent charters that
25 are in leased buildings, and particularly in leased

1 facilities that, you know, are privately owned, is
2 that it's very, very difficult for those charters to
3 qualify their energy expenditure plans because the
4 requirements of the owner of the building to
5 basically, you know, reimburse if the charter leaves
6 the building makes it really hard to get that to
7 happen.

8 We've done a lot of charters in our
9 programs but they've all been charters that are in
10 buildings that are owned by the local school
11 District. No problem there. But in privately owned
12 buildings, just doesn't happen because you can't get
13 over that hump.

14 So just wanted to make sure there was
15 clarity there. It's not that we don't want to try
16 to do it, but the landlords just don't want to go
17 along with that provision.

18 The other issue that I really do want to
19 highlight is the issue of school districts that are
20 in particularly municipal or irrigation utility
21 districts. Getting the formulas to work in terms of
22 the savings is extremely difficult because of how
23 those rates are structured.

24 And just like I know last year we gave some
25 exceptions to districts that are in the north part

1 of the state where they are getting, you know, the
2 power prices are very cheap because of being in
3 large hydro areas, we really need that exception for
4 folks that are in places like Modesto, Merced,
5 Turlock Irrigation District, and some of the other
6 municipal utilities, because the only way they can
7 get out of the conundrum is by putting a lot of cash
8 into the project to lower that denominator to bring
9 up that SIR, and a lot of these districts in those
10 rural communities are very poor and they don't have
11 the cash.

12 And because those are irrigation districts
13 where the rate structures are such that they're in
14 really high peak pricing, solar doesn't really bail
15 them out in terms of that SIR.

16 So I strongly encourage you to make a
17 recommendation that in the next iteration of
18 guidelines review that those districts be able to
19 get that exception. We have several that are in
20 those irrigation districts that are really
21 struggling to figure out how they're going to make
22 their plans work because they just don't have the
23 cash to bring it up the other way.

24 So those are my comments, thank you.

25 CHAIR GORDON: Thank you, Rick. Always

1 very helpful, and individual board members may be
2 following up with you on some questions specifically
3 around the charter question, but thank you very
4 much.

5 BOARD MEMBER DIAS: Kate?

6 CHAIR GORDON: Yes, David?

7 BOARD MEMBER DIAS: I don't even know. I
8 deal with the CPC a lot and all that stuff, but do
9 the municipal utility districts give incentives like
10 the incentive-owned utilities do? And that was a
11 joke about the incentive-owned utilities.

12 CHAIR GORDON: That was good.

13 Bob, do you want to -- Chair Weisenmiller,
14 sorry, do you want to address that?

15 CHAIR WEISENMILLER: No, this is about
16 looking generally at the publicly owned utilities,
17 there's like 44 of them. So some of them like SMUD
18 are very generous with incentives. On the other
19 hand, and I'm not going to be able to go through the
20 litany of all of them and certainly some of them are
21 less so, let's put it that way.

22 But certainly if it'll help, particularly
23 on this issue of the exemption issue or adjustment
24 issue, we can certainly have the staff try to pull
25 together some of it. You know, once we have an idea

1 of here's the, say, half dozen you're most concerned
2 about we could try to see what's there.

3 And certainly some of the peer use, like
4 SMUD for example, was really trying to figure out
5 how to help their customers participate. And again,
6 the question is how many of the others are also
7 being vigorous on that account? Don't know.

8 BOARD MEMBER DIAS: Thank you.

9 CHAIR GORDON: Good question. And thank
10 you.

11 Are there any other public comment from the
12 phone? Nothing else? Great.

13 So we will, just as a reminder for the next
14 meeting, we will -- which is on...

15 MR. BASTIDA: The 21st.

16 CHAIR GORDON: March 21st?

17 MR. BASTIDA: Yes.

18 CHAIR GORDON: We will be talking in much
19 more depth about potential -- about recommendations,
20 so between now and then Jack and I, and we will
21 reserve the right to reach out to you all. We're
22 not going to do a committee this time but we will
23 reach out individually to people to engage on this
24 question of how to start putting together a draft of
25 a recommendation section. What we'd ideally do is

1 have that draft for discussion at the next meeting,
2 and then we'll obviously be adding to it and
3 amending it at that meeting. But to the extent that
4 this conversation has brought up thoughts on that
5 section, please bring those -- well, communicate
6 those to Jack directly. Remember, we can't do big
7 emails, so directly to Jack or directly to me, and
8 we will be bringing a draft to the next meeting.

9 And at the next meeting we hope to approve
10 our entire report to the Legislature with any
11 amendments that we include in the next meeting.

12 MR. BASTIDA: Yeah, we padded a few extra
13 days this time so we can have time to do this.

14 CHAIR GORDON: It's going to be a little
15 bit less crazy than last year.

16 Great. Well, thank you to everybody, and I
17 don't think I have to move to adjourn, so I think I
18 can just adjourn.

19 MR. BASTIDA: All right.

20 CHAIR GORDON: Thank you again to everyone.

21 BOARD MEMBER ODBERT: Thank you.

22 BOARD MEMBER GOLD: Bye, everybody.

23 BOARD MEMBER HARRIS: Thank you, guys.

24 CHAIR GORDON: Folks on the phone, thank
25 you.
