Localized Health Impacts Report

Addendum 3 for Selected Projects Awarded Funding Through the Clean Transportation Program Under Solicitation GFO-17-607 – School Bus Replacement for California Public School Districts, County Offices of Education, and Joint Power Authorities

Gavin Newsom, Governor
February 2020 | CEC-600-2019-008-AD3

DISCLAIMER

Staff members of the California Energy Commission prepared this report. As such, it does not necessarily represent the views of the Energy Commission, its employees, or the State of California. The Energy Commission, the State of California, its employees, contractors and subcontractors make no warrant, express or implied, and assume no legal liability for the information in this report; nor does any party represent that the uses of this information will not infringe upon privately owned rights. This report has not been approved or disapproved by the Energy Commission nor has the Commission passed upon the accuracy or adequacy of the information in this report.
On February 6, 2019, the California Energy Commission (CEC) published a notice of proposed award (NOPA)\(^1\) announcing the schools, school districts, and other educational agencies selected to receive grant funding under Solicitation GFO-17-607. The Localized Health Impacts (LHI) Report for Solicitation GFO-17-607 (Publication: CEC-600-2019-008)\(^2\) was published and made available for public comment on March 6, 2019. This addendum uses the same approach to assess the LHI information for new project locations as in the original LHI report.

On June 3, 2019, the CEC published a revised NOPA\(^3\) where the project applicant, Eureka City Schools Unified School District, was added to the list of projects recommended by CEC staff for a funding award. Table 1 lists the proposed awardee along with their project details, and environmental justice (EJ) indicators\(^4\) corresponding to their project site location. See Appendix A of this LHI report for EJ indicator definitions.

Project funding is contingent upon the approval at a publicly noticed CEC business meeting and the execution of a grant agreement.

**Project Information and Emissions Reductions**

Toxic air pollutants such as nitrogen oxides (NO\textsubscript{x}),\(^5\) particulate matter (PM)\(^6\) 2.5 microns in diameter or less (PM\textsubscript{2.5}), and PM 10 microns in diameter (PM\textsubscript{10}) are known to cause harmful effects to heart and lungs in humans.\(^7\) Children, the elderly, and people suffering from heart or lung disease, asthma, or chronic illness are most sensitive to the effects of these pollutants. Replacing old diesel school buses with new electric school buses will benefit local communities by reducing the amount of NO\textsubscript{x} and PM typically emitted by older diesel school buses.

CEC staff analyzed potential emissions reductions by using an emission factor model (EMFAC)\(^8\) developed by California Air Resource Board (CARB) to assess mobile source vehicle emissions from on-road vehicles, including school buses. EMFAC per-mile emission rates of a Model Year 2005 diesel-powered bus are compared to the emission rates of a Model Year 2019 battery-powered electric bus to provide a baseline for the emissions analysis done in this LHI report. Table 2 lists the expected annual reduction in vehicle emissions from replacing a diesel-powered bus with an electric bus.

**Location Analysis Summary**

A project location must meet a two-part environmental and demographic standard for staff to identify it as a high-risk community project location (see Appendix A for details). Staff finds that the proposed project located in the city of Eureka does not meet the criteria for a high-risk community project location. While the project location does meet the environmental standard due to existing poor air-quality, it does not meet the demographic standard of having more than one EJ indicator threshold exceeded (shown in Table 3).

---

\(^5\) Nitrogen oxides are a chief component of air pollution that can be produced by the burning of fossil fuels. Also called oxides of nitrogen.

\(^6\) *Particulate matter* is unburned fuel particles that form smoke or soot and stick to lung tissue when inhaled. The number following "PM" represents particle size in microns.

Based on Energy Commission staff analysis, there are no anticipated adverse health impacts to local communities affected by the proposed project. If approved, these projects stand to provide improved quality of life by reducing unhealthy diesel school bus-generated emissions, bringing cleaner air to schoolchildren, and providing new jobs to the communities the awardee serves.

Public Comment

As provided by Title 13 CCR Section 2343 of the California Code of Regulations, a 30-day public review period applies to this LHI report from the date it is posted on the CEC website. The original posting date for this report is listed at www.energy.ca.gov/altfuels/documents/.

The CEC encourages comments by email. Please include your name or organization’s name in the name of the file. Send comments in either Microsoft® Word format (.doc) or Adobe® Acrobat® format (.pdf) to FTD@energy.ca.gov.

The public can email comments to FTD@energy.ca.gov or send them to:

California Energy Commission
Fuels and Transportation Division
1516 Ninth Street, MS-44
Sacramento, CA 95814-5512

All written comments will become part of the public record and may be posted to the Internet.

News media should direct inquiries to the Media and Public Communications Office at (916) 654-4989 or by email at mediaoffice@energy.ca.gov.
APPENDIX A:  
Localized Health Impacts Report Method

This LHI report assesses the potential health impacts to communities from projects proposed to receive Clean Transportation Program (also known as the Alternative and Renewable Fuel and Vehicle Technology Program) funding. This LHI report is prepared under the California Code of Regulations, Title 13, Motor Vehicles, Chapter 8.1 (CCR § 2343):

“(6) Localized health impacts must be considered when selecting projects for funding. The funding agency must consider EJ consistent with state law and complete the following:

(A) For each fiscal year, the funding agency must publish a staff report for review and comment by the public at least 30 calendar days prior to approval of projects. The report must analyze the aggregate locations of the funded projects, analyze the impacts in communities with the most significant exposure to air contaminants or localized air contaminants, or both, including, but not limited to, communities of minority populations or low-income populations, and identify agency outreach to community groups and other affected stakeholders.

(B) Projects must be selected and approved for funding in a publicly noticed meeting.”

This LHI report is not intended to be a detailed pollution analysis of proposed projects, nor is it intended to substitute for the environmental review conducted as part of the California Environmental Quality Act. This LHI report includes staff’s application of the EJSM developed by the U.S. Environmental Protection Agency to help identify projects located in areas where social vulnerability indicators, high exposure to pollution, and greater health risks are present.

High-risk community project locations are identified using data from CARB, the U.S. Census Bureau, and other public agencies. Energy Commission staff analyzes these data to assign EJ indicators for each project location specified in the LHI report. The proposed project location must meet a two-part standard as follows:

Part 1 – Environmental Standard:

- Communities located within an air quality nonattainment zone for ozone, PM$_{2.5}$, or PM$_{10}$, as designated by the CARB for criteria pollutants.

Part 2 – Demographic Standard:

- Communities having more than one of the following EJ indicators for (1) minority, (2) poverty, (3) unemployment, and (4) age. The EJ indicator thresholds are defined by staff as:
  1) A minority subset represents more than 30 percent of a given city’s population.
  2) A city’s poverty level exceeds the state average poverty level.
  3) The city (or county if city data are unavailable) unemployment rate exceeds the state average unemployment rate.
4) The percentage of people living in a city who are younger than 5 years of age or older than 65 years of age is 20 percent higher than the state average for persons under 5 years of age or over 65 years of age.
