Inverter Listing Request Instructions

General Guidance for Inverter Listing Request:

- Requirements are detailed in the Guidelines for California’s Solar Electric Incentive Programs (Senate Bill 1), Seventh Edition
- Equipment manufacturer must submit the request.
- Reports and documents must be written in English.
- Submit all the required documentation in a single email. Incomplete requests will be rejected and will lose their place in the review queue; a complete request must then be resubmitted.
- Requests containing falsified reports or altered forms will be rejected. The equipment may be permanently prohibited from inclusion on the list, and the manufacturer permanently prohibited from having equipment listed.
- Refer to the California Energy Commission website for additional instructions, examples, and best practices to avoid common mistakes.
- NOTE: Data and information submitted to the Energy Commission are public record. Do not submit any proprietary or confidential information. Proprietary or confidential information on required documents must be redacted or omitted prior to submission.
Document Requirements for an Inverter Listing Request

1. Required Request Documents

The manufacturer submits the listing request in a single e-mail to SolarEquipment@energy.ca.gov. Include a subject line stating the purpose of the equipment request (new or revised), the equipment type (Inverter), and the manufacturer's name. Attach to the e-mail all required documentation:

   a) Inverter Listing Request Form.
   b) Nationally Recognized Testing Laboratory (NRTL) certification(s) to UL 1741 from a NRTL whose OSHA Scope of Recognition includes UL 1741\(^1\). The UL 1741 certificate must include at least one of the following:
      I. Supplement SA
      II. Supplement SB (must utilize UL 1741-3\(^{rd}\) Edition)
   c) If choosing to utilize UL 1741 Supplement SA certificate, a UL 1741 Supplement SA test report or test summary must be submitted.
   d) Excel file(s) of the Power and Efficiency of Inverter Form.
   e) Additional supporting documentation, as required by Energy Commission staff. Please note that submitted information is public record; do not submit any proprietary or confidential information.

2. Minimum Criteria for Safety Certification

The certification(s) and test report(s) must meet the requirements outlined below.

   a) The UL 1741 (including Supplement SA) certification document.
      o Signed or stamped and dated by NRTL whose OSHA Scope of Recognition includes UL 1741.
      o Indicates the UL 1741 standard including Supplement SA, as well as Source Requirement Documents (SRDs) for the test.
      o Specifies the requested model number(s) certified.
      o Defines all the wildcards in model number(s).
      o Specifies inverter type is “Grid Support Utility Interactive”.
   b) UL 1741 Supplement SA test report or test summary.
      o Signed or stamped and dated by the NRTL.
      o Indicates testing completed according to UL 1741 including the Supplement SA sections (SA8-SA15).

\(^1\) A current list of NRTLs approved by OSHA, along with their recognized scopes, can be found on the OSHA website.
o Specifies the model number(s) tested.

o Specifies the firmware version(s) tested for grid support functionality (SA8-SA15).

o To reflect **Reactive Power Priority (RPP)** information on the list, submit supporting language from the NRTL, either in the UL 1741 certificate, UL 1741 test report summary, or an additional document that meets the following minimum criteria:
  - Signed or stamped and dated by NRTL.
  - Specifies the model number(s) tested.
  - Verifies that the Volt/VAr test (UL 1741 SA13) has been completed with reactive power priority enabled.

**Note:** Separate documentation is not required if the certificate or test report meets the requirements.

c) The UL 1741 (including Supplement SB) certification document.

  o Signed or stamped and dated by NRTL whose OSHA Scope of Recognition includes UL 1741.
  
  o Indicates the **UL 1741 (3rd Edition)** standard including Supplement SB, as well as Source Requirement Documents (SRDs) for the test (e.g., compliance with California Rule 21).

  o Specifies the requested model number(s) certified.

  o Defines all the wildcards in model number(s).

  o Specifies inverter type is “Grid Support Utility Interactive”.

d) The **Power and Efficiency of Inverter Form** in **Excel format**.

  o The most current version of the form must be used, or the request will be rejected².

  o Data from a NRTL whose OSHA scope includes UL 1741.

  o Form completed by NRTL.

  o Performance test data obtained in accordance with “Performance Test Protocol for Evaluating Inverters Used in Grid-Connected Photovoltaic Systems”³.

  o One form per model number and associated output voltage. At NRTL’s discretion, additional model numbers may be added if results can be applied.

  o Maximum Continuous Output Power Data:
    - Minimum 180 minutes of data.
    - 5 minute (or smaller) sampling intervals.
    - Values in kilowatts (kW) at unity power factor.

---

² [https://www.energy.ca.gov/programs-and-topics/programs/solar-equipment-lists](https://www.energy.ca.gov/programs-and-topics/programs/solar-equipment-lists)

³ [Sandia Lab test protocol](https://www.energy.ca.gov/programs-and-topics/programs/solar-equipment-lists)
Weighted Inverter Efficiency Data:
- Minimum of 5 test samples.
- Each sample tested at $V_{\text{min}}$, $V_{\text{nom}}$, and $V_{\text{max}}$.
- Tested at all required power levels.

Night Tare Loss, reported in watts (W).

**Note:** For inverters capable of receiving DC input from PV and/or batteries, the NRTL must complete the output power and efficiency tests with the DC input power supply connected to the inverter’s PV input port.

**Instructions for Completing the Inverter Listing Request Form**

Download the latest version of the Inverter Listing Request Form. Complete all boxes and fields or explain in the Request Form Notes why a field is not applicable.

a) List the manufacturer’s legal name (as listed on the certification). Any company name differences must be clarified through a signed letter submitted on company letterhead (see FAQ #1 below).

b) If providing certification to UL 1741 Supplement SA, and related UL 1741 Supplement SA test report summaries, complete related tables correlating to the inverter model numbers with the test report numbers and dates. These report numbers should match the submitted documents; mismatched information may require clarification which in turn would delay the review and processing of the request.

c) For UL 1741 Supplement SA certified model numbers enter all of the firmware version(s) that were tested for grid support functionality (SA8-SA15). This information must match the UL 1741 Supplement SA test report summary.

d) For UL 1741 Supplement SA Safety Certification section fill in the document(s) name and the associated page number(s) for the reactive power priority information. For example, “Test Report number 12345” and “page 13 of 20”.

e) If providing certification to UL 1741 Supplement SB, complete related table and answer the questions about UL 1741 Supplement SB certificate’s requirements.

f) For Multiple Listing requests and ACPV requests, refer to the respective instructions.

g) Provide any additional information to further explain or clarify the request in the “Notes” section. Accurate and detailed notes will help prevent the need for clarification and ensure timely processing of the listing request without further delays.
h) If applicable, in the “Communications Conformance” section, enter the name of the entity that issued the certificate or compatibility report.

Instructions for Submitting Optional Documentation with an Inverter Listing Request

The manufacturer may submit, as a part of the listing request, extra document(s) to demonstrate additional functionality. If submitted, the information will be evaluated by Energy Commission staff. Upon approval of the listing request, Energy Commission staff will indicate that the model numbers have completed the optional certification or testing on the Energy Commission’s Solar Equipment Lists. The documents that will be accepted are:

a) Test report summary for UL 1741 Supplement SA, sections SA17 and SA18.
b) Certification of the inverter to the Common Smart Inverter Profile (CSIP).
c) NRTL report for inverter compatibility with CSIP-certified gateway.
d) Attestation for Scheduling and Monitor Key Data functions (not needed if certified only to UL 1741 Supplement SB).

1. Minimum Criteria for Optional Document(s)

The entity issuing the document(s) must meet the following qualifications:

a) Test report summary for UL 1741 Supplement SA, sections SA17 and SA18.
   o The laboratory is recognized by the OSHA NRTL program.
   o The laboratory’s OSHA Scope of Recognition includes UL 1741.
b) Certification of the inverter to Common Smart Inverter Profile (CSIP) (One of the following):
   o A laboratory recognized by the OSHA NRTL program.
   o SunSpec Alliance.
   o A laboratory approved by SunSpec Alliance.
c) NRTL report for inverter compatibility with CSIP-certified gateway:
   o A laboratory recognized by the OSHA NRTL program.
   o A laboratory approved by SunSpec Alliance.

Any document(s) provided to support the indication of optional functionality must include the following:

a) Test report summary for UL 1741 Supplement SA, sections SA17 and SA18.
   o Signed or stamped and dated by the NRTL.
   o Indicates testing completed according to UL 1741 Supplement SA (SA8-SA18).
   o Specifies the model number(s) tested.
   o Specifies the firmware version(s) tested for grid support functionality (SA8-SA18).
b) Certification of the inverter to the CSIP.
Inverter Listing Request Instructions

FAQs

1. **What if I want my equipment listed under a different manufacturer name than the name on my certification?**

   If a manufacturer wants equipment listed under a different manufacturer name, the manufacturer must submit a letter containing the information listed below:
   
   - Submitted on company letterhead.
   - Signed and dated by an authorized representative of the company.
   - The legal name of the manufacturer (from the certification).
   - The name that manufacturer wants to use for equipment listing purposes.
   - The reasoning behind the request (for example, a manufacturer may want to list the brand name instead).
   - An explanation of all manufacturer name variations found on the submitted documents and the relation between each manufacturer name and the manufacturer name reported on the certification (parent company, subsidiary, etc.).

2. **What if my inverter requires an external transformer for grid interconnection?**

   The efficiency data for the external transformer must be provided. The final weighted inverter efficiency will include the efficiency of the external transformer. Contact the Energy Commission before submitting, as additional documentation may be required.

3. **What if the inverter includes a built-in meter?**

   If the inverter has an approved built-in meter that meets the metering requirements, the meter must be listed prior to inverter listing. If the meter is not listed, the meter manufacturer must submit a separate meter listing request. See the [Meter Listing Instructions](#) for more details.

4. **How can I add another firmware version to the equipment which are already on the list?**
You must obtain a new test report for UL 1741 SA that includes the new firmware version tested. You also need to provide the currently active UL 1741 (including Supplement SA) certificate for the related model numbers if any revision to the certificate was needed based on NRTL’s input. Please note that only firmware version(s) tested for UL 1741 Supplement SA sections SA8–SA15 will be reflected.

5. **How can I demonstrate that my equipment has completed the testing for reactive power priority?**
   You must send a listing request to revise the information on the list. The listing request must include a completed request form, the currently active UL 1741 Supplement SA certificate, and a document that meets the RPP requirements specified in Page 3 of this document. Please note this is only related to UL 1741 Supplement SA testing.

6. **How can I demonstrate that my equipment has completed the testing for CPUC Rule 21, Phase 2?**
   You must send a listing request to revise the information on the list. The listing request must include a completed request form, the currently active UL 1741 certificate including Supplement SA, and either 1) a certification of the inverter to the CSIP, or 2) a report demonstrating the inverter is compatible with a CSIP-compliant gateway in accordance with CPUC Resolution E-5000.

7. **How can I demonstrate that my equipment has completed the testing for CPUC Rule 21, Phase 3, functions 1 & 8, utilizing Supplement SA documents?**
   You must send a listing request to revise the information on the list. The listing request must include a completed request form, the currently active UL 1741 certificate including Supplement SA, and the completed attestation template, as instructed in this document. Please note if utilizing Supplement SB information to satisfy Rule 21 interconnection requirements, this attestation will not be required. 

8. **How can I demonstrate that my equipment has completed the testing for CPUC Rule 21, Phase 3, functions 2 & 3, utilizing Supplement SA documents?**
   You must send a listing request to revise the information on the list. The listing request must include a completed request form, the currently active UL 1741 certificate including Supplement SA, and a UL 1741 test report summary that shows the equipment has passed sections SA17 and SA18 testing.

9. **Can I submit documents to reflect information related to both UL 1741 Supplement SA and Supplement SB?**
   Yes, you can choose to reflect related information to either/both UL 1741 Supplement SA or/and UL 1741 Supplement SB. Please note that it is important you verify with the applicable utility, AHJ, or responsible entity whether a specific inverter contains the level of functionality required by their “smart inverter” definition.

10. **How do I know my request has been received?**
    The Energy Commission sends a confirmation email upon receipt of an equipment listing request. A unique request ID number (“R number”) will be assigned to each request and will be included in the confirmation email.

11. **What if I have questions or need updates on my request?**
    You can contact the Solar Equipment Contact Center at (916) 654-4120 or SolarEquipment@energy.ca.gov for any equipment listing questions. Please reference your “R” number to help Energy Commission staff identify the specific request. Manufacturers also receive email notifications from the Energy Commission when the status of a request changes or decisions (acceptance, clarification needed, or rejection) are made.

12. **How does the Energy Commission process my request?**
    Requests are processed on a first-in, first-out basis, and involve a 2-phased process: Phase 1 consists of an administrative screening, and Phase 2 consists of a technical evaluation. Only those requests
that pass administrative screening will be reviewed for technical evaluation. Requests that are complete and accurate on their first submission take typically no more than 45 days to be approved from the date the request was received. If clarification or additional information is required, or the request is rejected because of omissions or deficiencies, the Energy Commission will typically notify the manufacturer within 30 days. Requests that require clarification will take longer to complete than complete and accurate requests, and may take significantly longer than the 45-day timeline to complete the review and posting of approved equipment on the Energy Commission's Solar Equipment Lists. The Energy Commission updates the solar equipment lists three times a month, typically on the 1st, 11th, and 21st of the month, or the first business day thereafter.
