Appendix C  EDR Report
EXECUTIVE SUMMARY

URS Corporation (URS) conducted a Phase I Environmental Site Assessment (ESA) of the Reliant Energy Etiwanda facility at 8996 Etiwanda Avenue, Rancho Cucamonga, San Bernardino County, California (subject Property). The subject Property consists of an electric generating facility composed of four (4) natural gas-fire/oil-fueled generating units and one (1) natural gas/distillate-fueled generating unit with an approximate area of 64 acres. This Phase I ESA was performed on the subject Property and possible Offsite Laydown Area and Onsite Laydown Areas 1-9, with an inspection and document review of other areas conducted to identify any potential offsite sources of current or historical contamination.

URS has performed a Phase I ESA of the subject Property in conformance with the scope and limitations of American Society for Testing and Materials (ASTM) Practice E 1527. Any exceptions to, or deletions from, this practice are described in Section 8 of this report. These exceptions include the limited nature of the site reconnaissance and associated operator interviews.

According to the Guasti Quadrangle, California, 7.5-minute USGS topographic map, the subject Property is in Range 6 West, Township 1 South, Sections 8 and 17. The elevation of the subject Property is approximately 1,090 to 1,130 feet above mean sea level (msl). The topography in the immediate area of the subject Property generally slopes to the south-southwest.

The regional groundwater flow is to the southwest (Chino Basin Watermaster, Fall 2003). According to depth to water data provided by the Chino Basin Watermaster, the static groundwater level near the site was approximately 409 to 432 feet below ground surface (bgs) as measured in 2006.

Based on the results of the Phase I ESA, Recognized Environmental Conditions (RECs) and areas of concern (AOCs) were identified and are discussed briefly below:

- The four retention basins (2 general use, 1 boiler cleaning, and 1 RO basin) are all considered RECs as a result of their un-permitted use as hazardous waste storage units. However, since SCE is currently stipulated by the courts to conduct closure and corrective action under DTSC oversight, no additional work is required.

- The former coke gas and distillate fuel pipelines are considered RECs because of the possibility of a release from either line to the subsurface. There are no records to indicate that either line was tested for integrity and no way of determining if all of the coke fuel and distillate product reached their respective end use locations or if some may fuel/gas may have leaked from either pipeline.
Executive Summary

- Six areas (surface water discharge, pipelines, cooling tower, sulfuric acid storage tanks, former water softener and brine pit, and second solid waste disposal area) were identified by the Phase II site assessment conducted by G&M (1997) as having arsenic concentrations in soil that exceeded the screening criteria. These areas are considered RECs; if Reliant has documentation that the arsenic concentrations have been addressed through additional assessment and/or remediation, the designation of the area as a REC could be rescinded.

- The former 550-gallon UST is considered an AOC since documentation regarding closure of the UST was not provided by Reliant and was not in any agency file reviewed by URS.

- The site area for the combined cycle unit and all possible construction laydown areas are considered AOCs.

- The powerblocks and sumps for Units 1 and 2 and Units 3 and 4 are considered AOCs because of the presence of lube oil reservoirs, new oil/solvent drum storage, chemical storage, etc. The powerblocks have a base that is made up of approximately 18 inches of concrete. Drains in the Powerblocks direct oily water to an oil-water sump that in turn directs water via an underground pipeline to the general use retention basins. Both the pipelines and the basins are under investigation by SCE. URS does not believe additional assessment is required for the powerblocks. Sumps outside of the powerblocks were inspected by URS during this ESA. There was no evidence of a release or staining. Based on the results of the prior work by G&M (1997) and on the current ESA, further assessment of the sumps is not recommended at this time.

- The transformers at the subject Property are considered AOCs. According to Mr. Lacroix, some of the transformers contain PCBs. According to the G&M 1997 report, PCB concentrations in the transformers are below action levels. Based on the data from the G&M report and the lack of obvious leaks or releases, URS does not believe additional work is required regarding the transformers.

- ASTs (gasoline, sulfuric acid, ammonia, sodium hypochloride, hydrazine, liquid nitrogen) at the Etiwanda Generating facility are considered AOCs. All ASTs, however, are protected by secondary containment that is sufficient to contain a release from the AST. The exceptions are the hydrogen tank bank and the liquid nitrogen tank. Release from these tanks would not spread far and are not considered to require additional investigation at this time.
The former cooling towers in the proposed SGGS site are considered AOCs because of the presence of treated wood that contains arsenic. Analytical results of soil sampling indicate that although elevated arsenic is present in soil in the immediate area of the former cooling towers for Units 1 and 2, arsenic has not spread far beyond the immediate area of the cooling towers. When the cooling towers are demolished, the arsenic-treated wood will have to be handled and disposed of according to applicable local, state and federal regulations. An investigation beneath the former cooling towers will be required as part of the Resource Conservation and Recovery Act (RCRA) closure requirements for the facility, discussed in more detail below.
1. **INTRODUCTION**

This report presents the results of URS Corporation’s (URS) Phase I Environmental Site Assessment (ESA) update of the subject Property located at 8996 Etiwanda Avenue, Rancho Cucamonga, California (Figure 1). The subject Property consists of an electric generating station that is set on approximately 60 acres.

The scope of services conducted for this ESA corresponds to the ASTM guidance presented in ASTM Standard E 1527.

Curricula vitae for URS staff that conducted this Phase I ESA are provided in Appendix A. Photographs taken during the site reconnaissance visits are provided in Appendix B. The Environmental Data Resources (EDR) database search report and aerial photographs and historical topographic maps of the subject Property and surrounding area are presented in Appendix C.
2. **PURPOSE AND SCOPE OF SERVICES**

The purpose of the Phase I ESA was to identify recognized environmental conditions (RECs) that may exist at the subject Property. This includes areas where there could have been a release to the subsurface that has not been identified. The ASTM guidance document *ASTM Standards on Environmental Site Assessments for Commercial Real Estate*, Designation E 1527 (ASTM, 2000), defines RECs as “the presence or likely presence of any hazardous substances or petroleum products on a Property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the Property or into the ground, groundwater, or surface water of the Property.” The extent of research to identify RECs is limited by the scope of services discussed below.

This assessment was accomplished by, and limited to, a site reconnaissance and review of supplied and readily available pertinent documentation regarding past and current land use for indications of the manufacture, generation, use, storage, and/or disposal of hazardous substances at the subject Property. The investigation included a preliminary assessment of the potential for hazardous substance contamination from past and current activities at the subject Property based on available data, in general agreement with the scope and limitations of ASTM Standard E 1527.

URS’ scope of services consisted of the following tasks:

- Review of pertinent, available documents and maps regarding local hydrogeological conditions;

- Review of available historical aerial photographs of the subject Property and surrounding area;

- Review and interpretation of an archival topographic map of the subject Property and the surrounding area for information regarding subject Property land use that could have involved the manufacture, generation, use, storage, and/or disposal of hazardous substances;

- A limited reconnaissance of publicly accessible areas of the subject Property and areas within ½ mile of the subject Property to make visual observations of existing conditions at the subject Property, activities, and types of land use and businesses within the search area;

- Evaluation of current and previous land use at the subject Property based on available municipal, county, and state agency records and permits and evaluation of the records for evidence of hazardous substances, including hazardous wastes;
2.0 Purpose and Scope of Services

- Evaluation of current site conditions at the potential offsite laydown areas and onsite laydown areas 1-9;

- Review of county, state, and U.S. Environmental Protection Agency (EPA) lists of known hazardous substance sites within 1 mile of the subject Property; and

- Preparation of this report detailing the results of our findings and conclusions and recommendations for additional work, as appropriate.
3. **SITE OVERVIEW**

This section presents a general description of the subject Property. Mr. Michael Bowery of URS conducted reconnaissance visits of the subject Property and surrounding area on January 11, 2007, February 15, 2007 (Offsite Laydown Area), and March 5, 2007 (Onsite Laydown Areas 1-9). Observations made during the site reconnaissance visits are discussed in detail in Section 6.

### 3.1 SITE LOCATION AND PHYSIOGRAPHY

The subject Property is on the 8900 block of Etiwanda Avenue in Rancho Cucamonga, California, east of Interstate 15 and north of Interstate 10 (San Bernardino Freeway), in San Bernardino County, California. The subject Property is occupied by an electric generating facility approximately 60 acres in size. The subject Property includes a north-south drainage channel (Chadwick Channel).

Adjacent and surrounding properties include light to heavy industrial use to the north, south, and east and vacant/undeveloped land to the west.

Topographic coverage of the subject Property is provided by the U.S. Geological Survey (USGS), Guasti Quadrangle, California, 7.5-Minute series, 1981. The Property elevation is approximately 1,090 to 1,130 feet above mean sea level (msl). The topography of this area slopes gently to the south.

### 3.2 SITE GEOLOGY AND HYDROGEOLOGY

The subject Property is near the junction of the Transverse Ranges and Peninsular Ranges Physiographic Provinces. The subject Property site is in a basin on the Pacific side of the San Gabriel Mountains and is on a broad, gently sloping inland alluvial fan. The basin is predominantly an urbanized landscape situated on gently sloping Late Quaternary (Pleistocene and Holocene) alluvial deposits from the Santa Ana River that drains this area of the Transverse Ranges and northern Peninsular Ranges southeastward toward the Pacific Ocean.

The geology of the subject Property site is composed of igneous and metamorphic Mesozoic crystalline basement to the north and Late Quaternary basin fill deposits. Most of the sediments in the area of the subject Property site are alluvial and colluvial deposits composed of interbedded clays, silts, sands, and gravels up to 1,000 feet thick. The soils beneath the subject Property are generally well-graded sand and gravelly sand to a depth of approximately 40 feet. No known faults are present beneath the subject Property.
3.0 Site Overview

According to information supplied by Pat Hamilton (consultant to Southern California Edison; SCE, 2007), depth to groundwater in wells near the general use retention basins in the southeast corner of the subject Property ranged from 409 to 420 feet below ground surface (bgs) as measured on December 6, 2006. The groundwater flow direction was to the southwest at an approximate gradient of 0.005 ft/ft (Hamilton 2007).

According to information provided by EDR, soils identified at the site include the Water (no soil type provided), Hanford (sandy loam), Tujunga (loamy sand), and Tujunga (gravelly, loamy sand).

3.3 NATIONAL WETLANDS INVENTORY (NWI)

According to the EDR report, a portion of the subject Property is listed on the NWI. URS contacted Mr. Paul Lacroix of Reliant Etiwanda, who stated that he was not aware of any regulatory oversight of the subject Property related to the NWI and that he knew of no reason why the subject Property would be on the NWI. On March 12, 2007, URS had a telephone conversation with Mr. Eric Porter of the US Fish and Wildlife Service regarding inclusion of a portion of the subject Property on the NWI. Mr. Porter stated that he believed there were no regulatory implications regarding inclusion of the subject Property on the NWI.
4. **SITE HISTORY AND OPERATIONS**

Historical information reviewed for the subject Property included historical topographic maps, aerial photographs, and city directories. URS also interviewed a current employee (Paul Lacroix, environmental, health, and safety manager) who was also an employee of SCE.

4.1 **HISTORICAL AERIAL PHOTOGRAPHS**

URS reviewed historical aerial photographs of the site and surrounding area provided by Environmental Data Resources, Inc. (EDR), for evidence of previous activities at the subject Property and development that would suggest the potential presence of hazardous materials at the subject Property and surrounding area. A summary of this review is presented below. Copies of the aerial photographs are provided in Appendix C.

**1938** The subject Property appears to be undeveloped agricultural land. It appears that structures associated with farming, houses, and barns are in the northeast corner of subject Property near Etiwanda Avenue. A wash/stream is present on the north central portion of the subject Property running north-south. Properties adjacent to and surrounding the subject Property appear to be agricultural.

**1953** The subject Property is now occupied by a power-generating facility similar to the current layout. The primary exception is that boiler Units 1 and 2 and their cooling tower are installed and operating; boiler Units 3 and 4 do not appear to be installed. The adjacent and surrounding areas appear to have changed little since the 1937 aerial photograph except that an electric substation is now present adjacent to the south of the electric generating plant on the subject Property. Railroad tracks appear to be present running along the north subject Property boundary in an east-west direction. An aboveground storage tank farm consisting of four (4) ASTs is present adjacent to the southwest corner of the subject Property. An unlined drainage channel is present in the middle of the subject Property running north-south.

**1966** On the 1966 aerial photograph, it appears that boiler Units 3 and 4 and their cooling towers are now present. An industrial operation is now present adjacent to the northwest corner of the subject Property. Storage units of some type are now present adjacent to the northeast corner. Adjacent properties to the east, west, and south are mostly undeveloped agricultural land vacant with the exception of what appear to be residences across Etiwanda Avenue to the north and east of the subject Property. The AST farm in southwest corner now has six (6) large ASTs and two (2) small ASTs. Surrounding area to the northeast of subject Property is now occupied by a combination of agriculture and
residences. A container storage yard is located across Etiwanda Avenue to the southeast of the subject Property.

1977 The subject Property and the surrounding area appear relatively unchanged from the 1966 photograph, with the exception of more development (industrial operations/storage yard) to the north of the subject Property. Adjacent properties to the east and west are still mostly vacant with the exception of a building (commercial?) to the northeast of the subject Property across Etiwanda Avenue.

1989 The subject Property appears relatively unchanged. Adjacent property to the north is now fully developed with industrial operations and storage yards associated with industrial operations. Surrounding property to the south is now occupied by commercial/industrial operations.

1994 The subject Property and adjacent/surrounding land use appears similar to the 1989 photograph with the exception that a light industrial operation now appears to be located across Etiwanda Avenue to the northeast of the subject Property.

2002 The subject Property and adjacent/surrounding land use appears similar to the 1994 photograph.

The most significant issue related to the subject Property is the presence of the electric generating station in the 1953 photograph. The adjacent electric substation also has been present since at least 1953.

4.2 HISTORICAL TOPOGRAPHIC MAPS

URS reviewed historical USGS quadrangle maps provided by EDR for evidence of previous activities at the subject Property and development that may suggest the potential presence of hazardous materials at the subject Property and surrounding area. The following quadrangle maps were provided:

- Cucamonga Quadrangle, California – 1903 and 1954

A summary of this review is presented below, and copies of the historical topographical maps are provided in Appendix C.
4.0 Site History and Operations

1903 The subject Property appears to be undeveloped. Properties within the vicinity of the subject Property appear to be undeveloped. Railroad tracks appear to run along the northern boundary of the subject Property.

1941 The subject Property and the surrounding area appear to have undergone little change since 1903.

1954 The subject Property is occupied by a power plant. An oil tank farm (5 ASTs) is adjacent to the southwest corner of the subject Property. Surrounding properties to the northeast appear to be mostly residential, with the Kaiser Steel Plant located to the southeast of the subject Property. Main power transmission lines to the east of the subject Property across Etiwanda Avenue run north-south.

1966 The subject Property and adjacent/surrounding properties land use appears similar to the 1954 topographic map. The AST farm to the southwest now has six (6) large ASTs and two (2) smaller ASTs. Adjacent property to the northwest is now developed.

1973 The subject Property and adjacent/surrounding properties land use appears similar to the 1966 topographic map.

1981 The subject Property and adjacent/surrounding properties land use appears similar to the 1973 topographic map.

No additional issues related to historical subject Property uses were noted on the historical topographic maps.

4.3 CITY DIRECTORIES

URS retained EDR to conduct a search of city directories for coverage of the subject Property and adjoining properties by searching for addresses on Etiwanda Avenue and Mulberry Avenue. EDR provided search results for business directories for the years 1922 through 2003, which are provided in Appendix C.

Based on the sources searched by EDR, the only reference for the subject Property was a 1965 use listing Southern California Edison Co. Multiple listing were shown for surrounding properties beginning in 1960 and continuing through 2003. The listings included residences and commercial and industrial businesses (Appendix C). No additional issues related to historical subject Property uses were noted in the city directory search.
4.4 HISTORICAL FIRE INSURANCE MAPS

URS retained EDR to conduct a search for historical fire insurance maps of the subject Property and surrounding area for evidence of previous activities at the subject Property and development that may suggest the potential presence of hazardous materials. According to EDR, there is no Sanborn Fire Insurance Map coverage for the subject Property or the surrounding area. The no coverage letter is provided in Appendix C.

4.5 ENVIRONMENTAL LIEN SEARCH

URS did not request an environmental lien search from EDR.

4.6 HISTORICAL SITE OPERATIONS

URS interviewed Mr. Paul Lacroix, who is the environmental health and safety manager for Reliant Energy. Mr. Lacroix confirmed that the subject Property historically has been used for agriculture and that SCE built the power plant beginning in the 1950s.

4.7 CURRENT SUBJECT PROPERTY OPERATIONS

The subject Property was occupied by an electric generating facility that consists of four (4) natural gas/oil-fueled electric generating units and one (1) natural gas/distillate-fueled (JP5) generating unit. Units 1 and 2 are rated at 132 megawatts each, and Units 3 and 4 are rated at 320 megawatts each; Unit 5 is rated at 126 megawatts. According to Mr. Lacroix, only Units 3 and 4 are currently in operation to produce electricity. Units 1 and 2, as well as Unit 5 (Peaker Unit), are permanently out of service, although the structures for each unit are still in place.

The following is a description of major process systems, associated wastewater streams, and freshwater makeup sources involved in producing electricity at the Etiwanda facility:

- Cooling Water Systems – Steam generated in the boilers for Units 3 and 4 is directed to the corresponding unit turbine generator set, where the steam provides the turbine motive source. Units 3 and 4 are each equipped with a closed loop circulating water system to condense steam in a unit condenser after it has been expelled from the respective unit turbine. Cooling water is pumped through the unit condenser to cool and condense spent steam. From the condensers, the cooling water is directed to the top of the associated cooling tower and allowed to cascade down through the tower structure, giving up the heat picked up in the condensers. Cooled water exiting the cooling towers then is recirculated through the condensers to be cycled again.
Because of evaporative water loss in the cooling tower cycle, the cooling tower water tends to experience an increase in total dissolved solids (TDS). To maintain TDS concentrations at an acceptable level, cooling tower blowdown is discharged to the sewer and freshwater makeup is added to the system.

- **Low Volume Wastewater Sources** – To maintain appropriate boiler water quality objectives, water is discharged periodically through the station’s retention basins before discharge into the sewer. Boiler drains, stack drains, floor drains, and various other equipment are all sources of low volume wastewater that either flow into an oil-water separator or are discharged directly to the retention basin before discharge to the sewer (see Section 6.7 for additional wastewater information).

The Reliant Etiwanda generating facility maintains various storage tanks, equipment, and structures designed to store petroleum products. The petroleum products include fuel oil, lube oil, displacement oil, gear oil, gasoline fuel, and waste oil.
5. **RECORDS REVIEW**

URS’ regulatory review consisted of obtaining and reviewing EPA and state regulatory agency databases from EDR dated December 28, 2006, for the ASTM specific search radii (1.0 mile), which was extended to 1.5 miles, surrounding the subject Property. Based on information supplied by Pat Hamilton (2007), the shallow groundwater at the subject Property flows to the southwest. For purposes of evaluating offsite environmental concerns, facilities within approximately ¼ mile northeast of the subject Property are considered upgradient of the subject Property. A copy of the database search results provided by EDR is provided in Appendix C. This section summarizes the results of the review.

The subject Property was listed on the following databases:

- RCRA Large and Small Quantity Generator (Reliant Energy generates hazardous waste [waste oil, sludge, hydrazine, etc.] and is classified as a large-quantity generator)
- FINDS (Site activities resulting in air emission, air pollution credit information, and California and RCRA wastes are tracked in FINDS database)
- CA WDS (Facility has continuous and/or seasonal discharge from operations that is under Waste Discharge Requirements)
- WMUDS/SWAT (Facility is a major NPDES facility and is classified as a moderate threat to water quality if a release of process wastewater were to occur)
- HIST UST (Several historical USTs were present at the facility and have been removed)
- AST (Several aboveground storage tanks are ASTs located around the facility. These ASTs contain water, oil, acids, etc.)
- SWEEPS UST (Facility previously maintained a UST)
- CHMIRS (Listed in CHMIRS owing to several releases of cooling tower water to land)
- San Bern. Co. Permit (Permits issued because facility reports under EPCRA, generates hazardous waste, maintains a AST, produces air emissions, has a risk management plan)
- HAZNET (The facility also produces hazardous waste manifests and is therefore placed on the HAZNET database)
- EMI (Listed under EMI because facility emissions include carbon monoxide, total organic hydrocarbon gases, reactive organic gases, NOX, SOX, and particulates)

5.1 REGULATORY AGENCY FILES

5.1.1 National Priority List

The EPA’s National Priorities List (NPL) of uncontrolled or abandoned hazardous waste sites was reviewed for sites within 1.5 miles of the subject Property. To appear on the NPL, sites must have met or surpassed a predetermined hazard ranking system score, been chosen as a top
5.0 Records Review

priority site, pose a significant health or environmental threat, or be a site where the EPA has determined that remedial action is more cost-effective than removal action. The database search identified no NPL, Proposed NPL, or delisted NPL sites within 1.5 miles of the subject Property.

5.1.2 CERCLIS Sites

The EPA’s Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list was reviewed to determine whether site(s) within 1 mile of the subject Property are under investigation. The CERCLIS database identifies hazardous waste sites that require investigation and possible remedial action to mitigate potential negative impacts on human health or the environment. The database search identified no CERCLIS sites within 1 mile of the subject Property. Two (2) sites (TAMCO Wire and Vista Paint) within 1 mile of the subject Property were identified as CERCLIS-No Further Remedial Action Planned (NFRAP) sites.

TAMCO is adjacent to the northwest corner of the subject Property. According to the EDR report, no further action is planned. Because of the depth to water, any issue would be likely to be “soil only” and thus would not impact the subject Property. Based on research and soil sampling performed by Geraghty & Miller in 1997, which is after the date (6/21/1994) action was completed as noted in the EDR report, the TAMCO site does not appear to pose a currently known significant environmental risk to the subject Property.

According to Joan Simmons of the USEPA, there are no records for the Vista Paint site in Fontana approximately ¾ mile east-northeast of the subject Property. Based on the map distance, URS does not believe the Vista Paint site poses a currently known significant environmental risk to the subject Property.

5.1.3 State Hazardous Waste Sites (Envirostor)

California’s list of state jurisdiction sites on the Envirostor (formerly CALSITES) database was reviewed to determine whether such sites are located within 1.5 miles of the subject Property. The Envirostor database identifies federal and state hazardous waste sites where investigation and cleanup are needed, cleanup is under way, or cleanup has been completed and long-term monitoring or maintenance continues. The database also provides information on formerly contaminates sites that have been released for reuse and properties where environmental deed restrictions have been recorded to prevent inappropriate land use. The database search identified seven (7) sites within 1.5 miles of the subject Property. Of these, three (3) sites have been granted no further action.
TAMCO, which is adjacent to the northwest corner of the subject Property, has been granted no further action from the USEPA and California DTSC. TAMCO was referred to San Bernardino County because it is a generator of hazardous waste. Vista Metals is a historical Envirostor site with no further action planned from the DTSC. It is also ¾ mile from the subject Property. The remaining two Envirostor sites are more than 1 mile downgradient of the subject Property. None of the listed Envirostor sites is expected to pose a currently known significant environmental risk to the subject Property.

5.1.4 Federal RCRA Lists

The current RCRA Notifiers List was reviewed to determine whether RCRA treatment, storage, or disposal sites (TSDs) are within 1 mile of the subject Property. The database search identified one TSD facility, FNHJEH Environmental Management, Inc. (FNHJEH), within a 1-mile radius of the subject Property. FNHJEH is a transporter and processor of used oil and is also listed on the CORRACTS database with a low-priority corrective action status. Based on the map distance and that fact that the contaminant is used oil that does not have significant mobility, URS does not believe the FNHJEH site poses a currently known significant environmental risk to the subject Property.

The Corrective Action Report (CORRACTS) is a list of hazardous waste handlers with RCRA corrective action activity. The database search identified three (3) sites (FNHJEH, Chemwest Industries, and Kaiser Steel) within 1.5 miles of the subject Property. FNHJEH was discussed above, and the two other CORRACTS sites are over 1 mile southeast or downgradient of the subject Property and thus are not expected to pose a currently known significant environmental risk to the subject Property.

The RCRA-regulated hazardous waste generator notifiers list was reviewed to determine whether RCRA generator facilities are within 0.75 mile of the subject Property. The subject Property and 10 properties within a 0.75-mile radius were identified as RCRA generators of hazardous waste. Hazardous waste activity on the subject Property will be discussed in greater detail in Section 6.1. No violations were found at any of the 10 hazardous waste generator facilities.

5.1.5 Solid Waste Facilities

The state inventory of solid waste disposal and landfill sites list is a comprehensive listing of permitted waste disposal facilities. Two facilities were identified within 1 mile of the subject Property. Both sites are more than ½ mile from the subject Property and are either cross-gradient or downgradient and thus are not expected to pose a currently known significant environmental risk to the subject Property.
5.0 Records Review

5.1.6 Leaking Underground Storage Tank List

There were no leaking underground storage tank list (LUST) listings for the subject Property. Six (6) LUST sites were identified within 1 mile of the subject Property. The case status for all six LUST sites was “closed.”

5.1.7 Underground Storage Tank List

The UST list was reviewed to assess whether current USTs are located on or within 0.75 mile of the subject Property. The database search identified four (4) UST sites within 0.75 mile of the subject Property. TAMCO, which is adjacent to the northwest corner of the subject Property, is on the list of UST sites; however, there is no current LUST issue at TAMCO. Based on the information provided in the EDR report, URS does not believe the four UST sites pose currently known significant environmental risk to the subject Property.

5.1.8 CA SLIC List

The spills, leaks, investigations, and cleanups (SLIC) database lists unauthorized discharges from spills and leaks other than USTs. Three SLIC sites (TAMCO, Parallel Products, and Sterling Can) are within 1 mile of the subject Property. According to EDR, the TAMCO case status is “closed.” According to the EDR report, the parallel products site, which is more than ½ mile to the west-northwest, has an active SLIC case, but the contaminants are listed as TDS and BOD. The Sterling Can site is downgradient of the subject Property. Based on the case status, map distance and direction, and type of contaminant, URS does not believe the listed CA SLIC sites pose a currently known significant environmental risk to the subject Property.

5.1.9 Voluntary Cleanup Program Properties

The Voluntary Cleanup Program Properties (VCP) list was reviewed to assess whether VCP sites are within 1 mile of the subject Property. The VCP database contains low threat level properties with either confirmed or unconfirmed releases, and the project proponents have requested that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC’s costs. The database search identified no listing regarding the subject Property and two (2) listings (TI Wire and Fontana Steel) within 1 mile of the subject Property. The status for both VCP sites is “no further action.” Based on the case status, URS does not believe the two VCP sites pose a currently known significant environmental risk to the subject Property.
5.0 Records Review

5.2 UNMAPPED SITES

Unmapped sites are sites that have been identified within the database report but not mapped because of inadequate or erroneous Geocode information. The EDR database report identified 40 unmapped sites. Of these, 11 are clandestine drug labs (CDLs) that appear to be outside the search radii, and the remaining sites cannot be located because of partial address information. Three of the sites, Parallel Products, Kaiser Steel, and TAMCO, are listed and mapped in the EDR report. The sites that could not be located are provided in the EDR report.

5.3 REGULATORY AGENCIES

During the performance of an ESA, federal, state, and local regulatory agencies having jurisdiction over the subject Property are contacted to obtain the following information: the status of relevant environmental permits; whether there have been any notices of violations or other similar correspondence from such agencies; whether any corrective action or remediation is planned, is taking place, or has been completed at the subject Property; whether there have been any reported violations or complaints that the subject Property is not in compliance with environmental laws, regulations, or standards and whether the subject Property is under investigation for such noncompliance; whether the subject Property is listed on available regulatory databases; and whether there is other pertinent documentation on file with such regulatory agencies regarding the subject Property or surrounding sites of concern. Regulatory agencies contacted and a summary of the information obtained from these agencies are provided below.

5.3.1 California Environmental Protection Agency – Department of Toxic Substances Control

URS contacted California Environmental Protection Agency (Cal-EPA) – Department of Toxic Substances Control (DTSC) Cypress and Glendale offices to review information regarding current or historical contamination at the subject Property. The DTSC Glendale office responded that it has no records regarding the subject Property. Pertinent documents from the DTSC Cypress office are summarized below:

- In a letter dated July 3, 1992, the DTSC issued a Notice of Violation (NOV) to the SCE Etiwanda facility because SCE stored hazardous waste in the acid retention basin without a hazardous waste storage facility permit.

- On February 1, 1995, the Superior Court of the State of California, County of Los Angeles, issued a Judgment to SCE requiring SCE to investigate the retention basins, and if any investigation showed evidence of a release, the DTSC would issue a Cleanup and
Abatement order. The Judgment also required SCE to submit workplans and closure plans to address the retention basins.

- The DTSC file contained a *Sump Integrity Report* prepared by Pat Hamilton, CEG, dated December 19, 1996. The report covered sumps at several SCE facilities, including the reverse osmosis (RO) sump/basin at the SCE Etiwanda facility. The soil data from two angle borings and one background boring indicated that the basin had leaked low-pH water to the native soils.

- In a letter dated January 3, 1997, the DTSC presented comments regarding the Sump Integrity Report. Regarding Etiwanda, the letter stated that high sulfate values also indicated that the sump had leaked.

- In a Memorandum dated June 25, 1998, the DTSC provided a review of a June 11, 1997, report titled *Leak Detection Investigation Etiwanda Generating Station* (not included in agency file) also prepared by Pat Hamilton. According to DTSC, the report concluded that the minor leakage had occurred beneath the Boiler Chemical Cleaning Basin (BCCB) and North and South General Retention Basins (NRB and SRB). The memo required SCE to prepare a workplan to address comments provided by the DTSC.

- In a letter dated June 30, 1997, the DTSC informed SCE of its intention to proceed with issuing correction action at several SCE facilities, including Etiwanda.

- In a letter dated August 11, 1998, the DTSC informed Mountain Vista Power Generation at 8996 Etiwanda Avenue that a June 18, 1998, inspection had revealed several minor violations, including keeping copies of manifests, failure to determine the status of hazardous waste, failure to remove and record the amount of liquid removed from the BCCB leak detection system, the inspection checklist for the BCCB did not include recording the amount of fluid in the leak detection system, and the facility did not provide training records for HAZWOPER personnel.

### 5.3.2 Regional Water Quality Control Board – Santa Ana Region

URS contacted the Regional Water Quality Control Board - Santa Ana Region (Regional Board) to review information regarding current or historical contamination at the subject Property or adjacent sites. Pertinent documents from the Regional Board are summarized below:

- The Regional Board file contained Waste Discharge Order No. 94-21 Waste Discharge Requirements Including an Exemption form Requirements of the Toxic Pits Cleanup Act
dated January 29, 1994. WDO 94-21 was transferred to Mountain Vista Power Generation LLC effective January 1, 1998. WDO was rescinded by Order No. 01-67 dated July 20, 2001, because discharges to surface impoundments had ceased.

- An inspection report from the Regional Board dated November 14, 1998, was included in the file. The report documented a September 18, 1996, inspection of the boiler wash down basin. According to the report, the basin had not been used for six years; the report concluded that the basin was in good condition with no violations.

- The file contained a letter from the Regional Board to SCE dated December 9, 1998, that discussed soil remedial activities related to a release of hydrocarbons. The letter indicated that based on a review of the results of sampling contained in an August 21, 1998, report, no further action was required. The August 21, 1998, file was not provided in the Regional Board file.

5.3.3 San Bernardino County Fire Department – Hazardous Materials Division

URS contacted the San Bernardino County Fire Department – Hazardous Materials Division (SBCHMD) to review information regarding current or historical contamination at the subject Property or adjacent sites. Pertinent documents from the SBCHMU are provided in summarized below:

- In a report dated October 13, 1985, Dale Hinkle, P.E., of Laguna Hills, California, provided the results of a soil investigation concerning three USTs (120 gallon naphtha, 550 gallon kerosene, and 550 gallon unleaded gasoline). Five soil borings were advanced to 49 feet bgs each, and a total of 25 soil samples were collected. All samples were analyzed for TRPH by EPA method 418.1. The highest TRPH result was 11 milligrams per kilogram (mg/kg) from sample SB2 at 10 feet bgs. According to Geraghty & Miller (G&M; 1997), the three USTs were removed in 1986. In its 1997 report, G&M indicated that a new 550-gallon UST was installed in 1996 with secondary containment and continuous monitoring.

- A UST inspection report dated October 14, 1998 was filed by the SBCHMU. The report confirmed that the UST was installed in April 1996 and contained diesel fuel. The inspection report noted violations for no leak detection monitoring plan, no certification of financial responsibility, and failure to develop a response plan. There was no information in the file regarding a response from Mountain View Generating.
5.0 Records Review

- A permit to remove a 500-gallon UST was filed on January 3, 2000. The CUPA permit indicates that the UST capacity was 2,000 gallons and that it was filled with inert material and left in place.

- A letter dated July 20, 1995, from SCE submitted to San Bernardino County Environmental health states that a release of non-PCB mineral oil took place on July 14, 1995. Approximately 45 gallons of oil was released and was recovered by removal of soil. SCE reported that the hydrocarbon-affected soil was sent for reclamation and that SCE believed the area affected was fully addressed. No follow-up was in the file.

- From June 1999 to July 2002, there were eight (8) reported releases of cooling tower water. The release ranged in size from 20 to 10,000 gallons of cooling tower water. The SBCHMD responded to three of the incidents. The water was deemed nonhazardous, and no further action was required.

5.3.4 City of Rancho Cucamonga Fire Department (RCFD)

URS conducted a file review of the RCFD. Pertinent records are discussed below.

- A partially completed application for permit to store and use 2,000 pounds of hydrogen gas and 300,000 gallons of JP5 fuel was included in the RCFD file. The permit was not dated or signed.

- Pipeline system information was contained in the RCFD file for a 12-inch fuel oil line that provided fuel oil to the Etiwanda facility. The file contained a map showing the location of the pipeline. The pipeline appears to terminate on SCE property in the area of the former AST farm to the southwest of the Reliant property.

- A permit application dated November 11, 1999, to remove a UST at the Etiwanda facility was filed with the RCFD.

- A construction inspection record dated January 13, 2000, was prepared by the RCFD. The inspection covered the removal of a 500-gallon fiberglass UST from the Etiwanda facility. No noncompliance was observed. The inspection report indicated the UST was removed and transported offsite. Although a copy of the closure report was requested, the report was not contained in the file. (Note: Reliant was not able to provide a copy of the UST closure report.)
5.3.5 City of Rancho Cucamonga Building Department (RCBD)

URS visited the RCBD to review available files. No environmental files were present with the exception of a permit for SCE to retrofit for emissions reduction and a notation regarding the proposed removal of a UST and installation of an AST.

5.3.6 South Coast Air Quality Management District

The South Coast Air Quality Management District (SCAQMD) was contacted to request a review of available files. To date, the SCAQMD has not responded. Information supplied by the SCAQMD will be incorporated when it becomes available.

5.4 PREVIOUS REPORTS PROVIDED BY USER

5.4.1 1997 Phase I ESA Prepared by CH2M HILL

At the request of SCE, CH2M HILL prepared a Phase I Environmental Site Assessment, Etiwanda Generating Station, dated May 1997. The findings and conclusions of the CH2M HILL Phase I are summarized below.

- CH2M HILL personnel observed what appeared to be an oily substance and staining in the unlined Chadwick Channel; based on the staining observed, CH2M HILL considered Chadwick Channel to be a REC;
- Past use of the retention basins made them subject to an investigation under an order by the DTSC; based on the ongoing investigation, CH2M HILL designated the retention basins an area of concern (AOC);
- As a result of the presence of a white powdery substance near the sulfuric acid tank near the cooling towers, CH2M HILL designated the white powdery area an AOC;
- As a result of the former practice of placing cooling tower sludge (possibly containing chrome and arsenic from treated wood) in an unlined leaching basin, CH2M HILL designated the former leaching basin an AOC;
- As a result of the possible presence of a landfill area near the west end of the subject Property, CH2M HILL designated the possible landfill an AOC;
- As a result of visual evidence of a small spill or leak inside the secondary containment area of the northwest fuel oil tank, CH2M HILL designated the area a REC;
5.0 Records Review

- As a result of the presence of oil in a recessed sump valve box near the fuel oil pumping system in the tank farm, CH2M HILL designated the sump box an AOC;

- SCE reported that the primary fuel oil pump area and the truck loading area were the locations of possibly contaminated soil. As a result of the potential for subsurface contamination, CH2M HILL designated these areas AOCs;

- As a result of the presence of transformer that contained PCB-bearing oil and the possibility of a PCB release, CH2M HILL designated the transformers AOCs;

- CH2M HILL designated the presence of petroleum hydrocarbon-affected soil in the AST areas a REC;

- As a result of oil staining in the powerblock areas near equipment that contained oil, CH2M HILL designated the oil stained area an AOC;

- As a result of the presence of untested subsurface and aboveground piping that conveys fuel oil from oil tanks to the powerblock, CH2M HILL designated the piping an AOC; and

- As a result of the presence of arsenic and chrome-treated wood in the cooling towers and the possibly that soil beneath the cooling towers may be impacted by contaminants that leached from the treated wood, CH2M HILL designated the cooling tower areas AOCs.

5.4.2 Etiwanda Generating Station, Phase II Environmental Site Assessment Prepared by Geraghty & Miller, Inc.

To assess the AOCs and possible RECs designated by CH2M HILL, G&M conducted a Phase II site assessment at the Etiwanda Generating Station for SCE and prepared a report with findings and conclusions dated June 6, 1997. G&M conducted an assessment of 31 areas with the potential for historical or current releases of hazardous substances or petroleum products at the SCE Etiwanda Generating Station. The following is a summary of the conclusions and recommendations provided by G&M).

- Regulatory agency records indicated that the Ameron and TAMCO facilities immediately north of the subject Property reported contaminated soil near the Etiwanda Generating Station that may have not been delineated. Based on a review of available investigative data, G&M concluded that it did not appear that releases associated with Ameron and TAMCO had impacted soil on the subject Property. Based on the data reviewed, G&M
recommended no further action for soil. Groundwater data was not available for review by G&M and was not included in its conclusions and recommendations. According to G&M, the following three site features were combined with other site features: tank containment structures, drains and sumps, and spills.

- To investigate the possibility of waste discharge from offsite sources that may have impacted Chadwick Channel, G&M conducted a soil investigation. Based on the analytical results from their investigation, no further action was recommended.

- The three retention basins (2 general and 1 reverse osmosis) and the adjacent acid and caustic tanks were not addressed by G&M because of the ongoing investigation by SCE that was being conducted under the order of DTSC.

- Based on the Phase II investigation, the following site features were identified as requiring no further actions: waste discharges (from offsite sources), underground storage tanks, hazardous waste storage area, solid waste disposal area (landfill), scrap metal yard, septic systems, site of 1995 reported transformer oil spill, vineyard water tank, peaker unit floor drain and sumps, bone yard (laydown area), switchyard perimeter, boiler wash water storage tank area and Units 1 and 2 cooling tower sludge dewatering basin, utility pole storage, and agricultural research area.

- At four of the site features, no further action was recommended at this time; however, agency negotiation and additional sampling may be required as part of decommissioning at the following sites: ASTs, transformers, powerblock, and possible UST. URS expects that any work associated with these site features will remain the responsibility of SCE.

- Six features were identified that had arsenic concentrations in soil that exceeded the screening criteria. These areas were: surface water discharge, pipelines, cooling towers, sulfuric acid tanks, former water softener and brine pit, and the second solid waste disposal area (landfill). G&M recommended that SCE conduct an environmental risk screening evaluation to demonstrate the safety of these areas. There was no documentation as to whether SCE conducted the risk screening.

### 5.4.3 2005 Data Report Shallow Soil Investigation Etiwanda Steam Station, Units 1 and 2 Cooling Towers; Prepared by URS

The main objective of the August 2005 investigation by URS was to assess the extent of arsenic contamination in the shallow soil around the cooling towers for Units 1 and 2 in the northwest corner of the subject Property. Previous soil sampling events conducted by Earth Tech in March,
April, and May 2005 indicated that shallow soil samples contained arsenic in concentrations ranging from 160 mg/kg to 390 mg/kg. During the URS investigation, a total of 23 soil boring locations were sampled at 6 and 12 inches and submitted for analysis for total arsenic. Based on the results for total arsenic, only one sample (B-19-6) exceeded by \(10 \times\) the STLC value for arsenic; therefore, the WET was run on that sample. The result was 5.49 micrograms per liter (\(\mu g/L\)). This level is slightly above the STLC of 5.0 \(\mu g/L\) for arsenic. The report concluded that based on the results from the additional sampling, it appears that elevated arsenic concentrations detected during the Earth Tech sampling event do not extend much beyond the base of the cooling tower units.

5.4.4 2006 Annual Groundwater Monitoring Report, Groundwater Monitoring Program with Fourth Quarter 2006 Sampling Data – Etiwanda Generating Station by Pat Hamilton, CEG

In 1996, SCE implemented a Water Quality Monitoring Program in response to a Final Judgment pursuant to Stipulation handed down by the Superior Court of Los Angeles on February 1, 1995. The Stipulation alleged that SCE had stored hazardous wastes in un-permitted surface impoundments (basins) at 11 of their generating station, including Etiwanda. SCE agreed to perform closure investigations at the three surface impoundments (2 general use retention basins and 1 boiler cleaning basin).

SCE performed surface investigation in 1996 and 1998. The results of the two investigations indicated that leakage had occurred beneath the surface impoundments as a result of elevated metal concentrations, low pH values, and the presence of VOCs in some soil samples. Based on these results, SCE submitted a Water Quality Monitoring Program (WQMP) in June 2001 to the DTSC. After DTSC approval of the WQMP, SCE installed four groundwater monitoring wells (EW-1, EW-2, EW-3, and EW-4) in April 2002.

The initial groundwater sampling event took place in the second quarter of 2002. The results of the sampling event showed that the flow direction was more westerly than expected and that no wells were downgradient of the north and south retention basins. Thus, two additional wells (EW-5 and EW-6) were installed downgradient of the retention basins.

The 2006 annual report concluded the following:

- Groundwater monitoring data for general mineral chemistry showed a decreasing trend for TDS in 2006.
5.0 Records Review

- There were no metal or VOC parameters that would indicate a change in the groundwater between the background and compliance wells.

5.5 SCE INVESTIGATION OF RETENTION PONDS

As previously stated, SCE was ordered in 1995 by the Superior Court of Los Angeles to perform closure investigations because of the un-permitted storage of RCRA listed hazardous waste in three onsite retention basins. In a letter dated August 22, 2005, DTSC informed several interested parties, including Mountain View Power Company LLC (Reliant Energy Corporation), of the Superior Court order for SCE to perform closure and corrective action at several former SCE facilities, including the Etiwanda Generating Station. The 2005 DTSC letter further stated that DTSC had previously dealt exclusively with SCE, but since many facilities had been sold in whole or in part by SCE, the DTSC recognized that it needed to be more involved with current owners. The letter also stated that although SCE is ultimately responsible for closure and corrective action, new landowners also acquire liability for needed closure and corrective action. In the 2005 letter, the DTSC requested a meeting with Mountain View, Reliant Energy, and others to discuss the requirements of corrective action.

URS was provided a copy of the slide show that was supplied at the meeting with parties that have acquired whole or part of an SCE facility subject to closure and corrective action. One slide dealt with Responsibilities of Current and Future Owners as follows:

- Provide site access for Corrective Action activities.
- Notification of DTSC for: 1) Change in Ownership and 2) Site Development.
- Notification to perspective purchasers of obligations for Corrective Action.
- Allow Corrective Action process to proceed without interruption.
- Assume responsibility for Corrective Action if SCE abandons the site.

On February 13, 2007, URS had a telephone conversation with Pat Hamilton, and on February 14, 2007, URS had a telephone conversation with Randy Weidner of SCE regarding the ongoing closure investigation and corrective action process at the Etiwanda Generating Station. Mr. Hamilton stated that the closure process was nearing completion and that the most significant item still to be addressed was confirmation soil sampling along the pipeline from the oil/water sump just north of Units 3 and 4 to the general use retention basins in the southeast corner of the subject Property. He further indicated that the soil sampling should be conducted later this year. Mr. Hamilton also stated that since SCE has placed RCRA listed chemicals into the basins as un-permitted storage or hazardous wastes, SCE was also under an obligation to perform a “fence to fence” investigation at the subject Property, which is outside of and in addition to the closure/corrective action at the retention basins.
Mr. Weidner confirmed the need for the “fence to fence” investigation and indicated that he believed that DTSC should be notified by Reliant before additional site development commences. The main COCs are arsenic, copper, and chromium from treated wood that is used to construct the cooling towers.

On March 9, 2007, URS spoke with Ms. Chris Bucklin of the DTSC Glendale office. Ms. Bucklin is the current DTSC project manager for the former SCE Etiwanda Generating Station. Ms. Bucklin indicated that although all work (closure of basins and “fence to fence” investigation) must be completed before final closure is granted, the schedule for completion of the closure/corrective action process and the “fence to fence” investigation was primarily at the discretion of SCE. Ms. Bucklin stated that she believed that many new site owners had conducted “baselining” investigations in areas that were set for development. The baselining assessment would establish site conditions for which SCE may be responsible versus the new landowner. Finally, Ms. Bucklin indicated that DTCS did not need to be notified before development of a site that was subject to corrective action and “fence to fence” assessment, but she did recommend notification to set up DTSC oversight of the project.

5.6 USER-PROVIDED INFORMATION

No other information or environmental reports regarding the subject Property were provided to URS for review.
6. **SITE RECONNAISSANCE**

Mr. Michael Bowery of URS conducted a limited reconnaissance of the subject Property and surrounding area on January 11, February 15, and March 5, 2007. Photos taken during the site reconnaissance visits are provided in Appendix B. At the time of the site reconnaissance visits, the facility was not producing electricity. Observations made during the site reconnaissance visits are discussed below. Mr. Paul Lacroix, who is the environmental health and safety manager for Reliant Etiwanda, accompanied Mr. Bowery on the site reconnaissance visits.

6.1 **HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS**

Multiple hazardous substances and petroleum products were observed at the subject Property during the site visit. Hazardous materials noted included acetylene, ammonium hydroxide, hydrazine, corrosive inhibitor, nitrogen, potassium nitrite, sodium carbonate, sodium hypochlorite, monosodium phosphate, disodium phosphate, trisodium phosphate, mixed gases, etc. Petroleum products stored and used at the Etiwanda Generating Station include propane, diesel oil, gasoline, turbine oil, miscellaneous oil and latex paint and thinner.

6.1.1 **RCRA Permitting and Hazardous Waste Management**

The Resource Conservation and Recovery Act of 1976, which amended the Solid Waste Disposal Act, addresses solid waste (Subtitle D) and hazardous waste (Subtitle C) management activities. The Hazardous and Solid Waste Amendments (HSWA) of 1984 strengthened RCRA’s waste management provisions and added Subtitle I, which governs USTs.

According to the RCRA Subtitle C Identification Form for 2005, the facility became a generator on April 7, 1998. The facility is a large quantity generator (>2,200 pounds/month) and was issued Generator ID No. CAD008302903. Reliant is not a transporter, treater, storer, or disposer of hazardous waste onsite and does not recycle hazardous waste onsite. Onyx Environmental Services transports and disposes of hazardous waste generated by Reliant Etiwanda at its Azusa, California, facility. USEPA waste codes that apply to Reliant Etiwanda are D001, D007, D008, and U133. State regulated hazardous waste codes include 212, 352, 512, and 571. According to the RCRA subtitle C 2005 Form, Reliant Etiwanda is not a used oil transporter or processor. Reliant Etiwanda is not a large quantity handler of universal waste. The SBCHMU has issued an annual CUPA Permit for Reliant Etiwanda (Facility FA0002943).

The following table lists hazardous wastes generated at Reliant Etiwanda and their approximate annual quantities. This information was developed from the 2006 business plan and from Mr. Lacroix.

### 6.2 STORAGE TANKS/UNDERGROUND PIPELINES

No USTs are currently present onsite. Numerous ASTs are present in various locations on the subject Property and range in size from 250 gallons to 12,000 gallons. Chemicals stored in the ASTs include propane, gasoline, nitrogen, sulfuric acid, sodium hypochloride, hydrazine, and lube oil. Water also is stored in several ASTs. Two lube oil reservoirs each are located under Unit 1/Unit 2 (4,200 gallons each) and Unit 3/Unit 4 (3,325 gallons each). ASTs containing lube oil are located in the Lube Oil Room West (10,000 gallons), Lube Oil Room Center West and Center East (both 6,000 gallons each), and Lube Oil Room East (6,000 gallons). Waste oil from the oil/water skimmer located at the two general use retention basins is stored in two 2,300-gallon ASTs just to the east of the retention basins. Gasoline is stored in a 250-gallon AST adjacent to the east of the two general use retention basins. Sulfuric acid is stored at several locations near the cooling towers in 12,000-gallon ASTs. Sodium hypochloride also is stored near the cooling towers and cooling tower makeup basin in 3,000-gallon ASTs. No visible spills or leaks were associated with any of the ASTs.

According to Mr. Lacroix, the only underground line that contains petroleum products runs from the distillate tank to Peaker Unit 5. Mr. Lacroix indicated that the 6-inch pipeline might be about 3 feet bgs. The distillate tank is empty and has been cleaned. According to Mr. Lacroix, the underground distillate line never has been tested.
6.0 Site Reconnaissance

6.3 POLYCHLORINATED BIPHENYLS (PCBS)

Transformers that reportedly contain PCBs and oil are located adjacent to all four (4) units. According to Mr. Lacroix, there have been no leaks or spills from the transformers. According to G&M (1997), the PCB content in the oil is below regulatory thresholds. There were no spill or leaks near any of the transformers.

6.4 SOLID WASTE DISPOSAL

No solid waste storage was noted at the time of the site reconnaissance. Solid waste is not disposed of at the facility.

6.5 DRUMS AND CHEMICAL CONTAINERS

During the site reconnaissance, only one 55-gallon drum was noted onsite. This drum was stored in the hazardous waste storage area and reportedly contained waste oil.

6.6 DUMPING

Evidence of dumping was not observed on the subject Property during the site reconnaissance.

6.7 DRAINS, SUMPS, PITS, PONDS, AND LAGOONS

Three retention basins, one cooling tower makeup water basin, and a boiler wash down basin are present at Reliant Etiwanda. The retention basins and boiler wash down basin are all lined with a poly liner. All five units have a gunite base.

One retention basin is located adjacent to the reverse osmosis (RO) facility in the south central portion of the facility and contains mineralized water that is a by-product of the reverse osmosis process. Water from the reverse osmosis basin goes to flumes and then to the cooling towers. Eventually, wastewater from the RO basin is discharged to the wastewater system that is directed to either the La Verne (to the west) or the Chino (to the east) Wastewater Treatment facility.

Two general use retention basins are located near the southeast corner of the subject Property. These basins receive water from an oil/water sump just north of Unit 4. An oil-water separator in the south basin removes the oil from the oil-water sump and then allows the water to enter the retention basins. Wastewater from the retention basins is periodically discharged to two lines that lead to either the La Verne or the Chino Wastewater Treatment facility. All three of the retention basins are under a cleanup order from the DTSC issued to SCE, the previous owner.

The boiler wash down basin is in the extreme southeast corner of the facility. This basin is lined with a combination of gunite, geo-netting, and poly. The basin was not active at the time of the
site visits and according to Mr. Lacroix may never have been used for the purpose of retaining wash down water from the boilers. The wastewater instead was directed to Baker tanks.

The cooling tower makeup water basin is near the northeast corner of the subject Property. Water entering the cooling tower makeup water basin comes from the three water production wells, Colorado River water, and reclaimed water. This water is pumped through the cooling towers and makes five loops before being discharged to the offsite wastewater treatment facilities in La Verne and Chino. According to records supplied by Reliant Etiwanda, 17,395,000 gallons of wastewater was discharged in December 2006.

Three active sumps are located in and around Units 3 and 4. An oil-water sump is located just north of Unit 4 and discharges water to the retention basins, as previously discussed. Another sump is located inside the powerblock and directs water (and any spilled oil) to the oil-water sump. An oil sump is located just a few feet south of the oil/water sump, it recalculates any oil that would have entered it, and it is no longer in service. Additional sumps are located near Units 1 and 2 and are not in service.

The former cooling tower sludge basin is just to the left of the cooling tower for Units 1 and 2 in the northwest corner of the subject Property. According to Mr. Lacroix, the former CTSB is no longer in use. Currently, when sludge is generated by cleaning the cooling towers, it is placed in 20-yard roll-off containers that allow water to be leached from the bins.

No pits or lagoons were observed on the subject Property.

6.8 STAINED AND DISCOLORED SOILS

No stained or discolored soils were observed on the subject Property.

6.9 STRESSED VEGETATION

Visible indications of stressed vegetation were not observed on the subject Property, with the exception of stormwater erosion.

6.10 UNUSUAL ODORS

No unusual odors were noted at the subject Property.

6.11 WELLS

Reliant Etiwanda draws a portion of its water needs from three water production wells. At the time of the site reconnaissance, another water well was being installed onsite (to replace one of
the offsite wells) just to the south of Units 3 and 4. The other wells are located offsite on adjacent properties.

6.12 STORMWATER RUNOFF ISSUES

Stormwater runoff is directed through two main north-south conveyances: 1) A 30-inch storm drainpipe enter the facility at the east end of Cooling Tower #3. This drain runs due south and exits the facility near the former distillate AST. Stormwater runoff from facilities to the north of the subject Property commingles with runoff from Reliant Etiwanda. Reliant tests the storm drain influent (locations D-2 and D-4 on Figure 3) and effluent (locations D-1 and D-2 on Figure 3) twice per rainy season (the first storm event and one other random storm event). 2) Chadwick Channel is a surface drain that enters the facility between the cooling towers for Units 3 and 4. It then makes a shift to the west and parallels the west side of Unit 4 before exiting the facility to the southwest of the reverse osmosis retention basin. The overall storm drain pattern at the facility is shown in Figure 3. No evidence of a hazardous waste release was evident in the surface or subsurface drain. According to Mr. Lacroix, the pH was high (>11) on one occasion in a sample collected Chadwick Channel where it enters the subject Property and on another occasion oil was present in the 30-inch line also where it enters the subject Property. No other issues have been noted with respect to the storm drain system since Reliant took over in 1997.

A manual valve is located south of the admin building. According to Mr. Lacroix, the drain associated with the valve is inspected 30 minutes after flow has begun from a storm event. If the water appears to be mixed with oil, it continues to be directed to the oil-water separator and general use retention basins. If the water appears to be free of oil, the valve will be closed and the discharge will be directed to the 30-inch storm drain.

6.13 CURRENT USES OF ADJACENT PROPERTIES

Properties adjoining the subject Property were identified in an attempt to evaluate the reasonable likelihood of their activities to adversely affect or to have affected environmental conditions at the subject Property.

North: Light to Heavy Industrial (TAMCO, Ameron, TI Wire, Bernal Hydraulics, Pacific Coast Recycling).

South: SCE Switch Yard, Inland Empire Water District ASTs (store reclaimed water).

East: Etiwanda Avenue, then All State Recycling, Commercial (bail bondsman).

West: Undeveloped, vacant land.
6.14 OTHER ISSUES

6.14.1 Asbestos-Containing Materials (ACMs)

URS did not perform an asbestos survey of the subject Property. According to Mr. Lacroix, asbestos in the past commonly was used to insulate piping on the boiler units. The asbestos is removed on a periodic, as needed basis. Mr. Lacroix pointed out “blue-banded” liners where the asbestos has been removed and “chrome-banded lines” where asbestos still remains but is in good condition. An extensive survey was conducted in 2006 of Units 1 through 4 and records are located retained on site.

6.14.2 Ozone-Depleting Substances (ODSs)

Freon is present in several air-conditioning units spread around the facility and is also present in some old chiller units. As the chiller units need maintenance, they are taken out of service and a licensed air-conditioning specialist removes the freon for recycling. No environmental issues were identified with regard to ODSs.

6.14.3 Pesticide Usage

No pesticides were observed on the subject Property at the time of the site reconnaissance. The subject Property and adjacent properties were in agricultural use in the past; therefore, it is likely that pesticides are used and/or have been used on the subject Property and surrounding area.

6.14.4 Radiation

The site representative reported that no radioactive substances are present at the subject Property.

6.14.5 Noise

No excessive levels of noise were detected on the subject Property during the site visit (the generating station was not in operation).

6.14.6 Proposed Offsite Laydown Area, Onsite Laydown Areas (Inspected 2/15/2007)

**Offsite Laydown Area:**

The Offsite Laydown Area is to the west of the subject Property and is bounded on the north by railroad tracks and then commercial (car auction), on the south by undeveloped, vacant land, on the east by railroad tracks and then vacant, undeveloped land, and on the west by vacant, undeveloped land. The Offsite Laydown Area is undeveloped, vacant land and is unpaved. During the site reconnaissance, there was evidence that the Offsite Laydown Area is used for off-
road motorcycle racing. Otherwise, the Offsite Laydown Area is characterized by hummocky terrain with several small gullies. Scattered amounts of trash and debris were present onsite. A petroleum pipeline runs along the southern boundary of the Offsite Laydown Area. Six storm drainpipes run beneath the railroad tracks in the northeast corner of the Offsite Laydown Area. Flow from sites to the north enter through the drains and proceed to the South. Photographs of the Offsite Laydown Area are provided in Appendix B.

**Onsite Laydown Areas 1-9 (Inspected March 5, 2007):**

Onsite Laydown Areas 1-9 are spread throughout the facility, with only Area 1 being located offsite on land owned by Inland Empire Water District to the South. Photographs of Areas 1-9 are provided in Appendix B. A brief description of each area is provided below:

1. Area 1 consists of 4.5 acres that surround the two ASTs owned by Inland Empire Water Agency and is located entirely within the bermed area surrounding the ASTs. The surface is a mixed to an oil-based topcoat material and soil where the topcoat has been eroded. There was no evidence of gross contamination (staining) in Area 1.

2. Area 2 consists of 0.5 acre and is located between the cooling tower for Unit 4 and the boiler for Unit 4. It is bounded partially on the south by Chadwick Channel. The surface is characterized by approximately 50% asphalt paving and 50% sand/gravel. There was no evidence of gross contamination (staining) in Area 2.

3. Area 3 consists of 2.2 acres and is located between the cooling tower for Unit 3 and Units 1 and 2. The surface area is 90 to 95% paved with approximately 5% sand/gravel. There was no evidence of gross contamination (staining) in Area 3.

4. Area 4 consists of 0.3 acre and is located along Chadwick Channel near the South boundary of the subject Property. The surface is composed entirely of gravelly sand. There was no evidence of gross contamination (staining) in Area 4.

5. Area 5 consists of 0.35 acre and is located just to the west of the hazardous waste storage area. The surface is composed entirely of gravelly sand. There was no evidence of gross contamination (staining) in Area 5.

6. Area 6 consists of 0.3 acre and is located immediately south of Area 5. The new water production well is located near the center of Area 6. The surface is composed entirely of gravelly sand. There was no evidence of gross contamination (staining) in Area 6.
7. Area 7 consists of 0.7 acre and is located along the south boundary of the subject Property adjacent to the SCE Switch Yard. The surface is composed entirely of gravelly sand. There was no evidence of gross contamination (staining) in Area 7.

8. Area 8 consists of 1.4 acres and is located in the extreme southeast corner of the subject Property. Area 8 includes the distillate AST and the boiler wash down basin. Excluding the AST and basin, the surface is entirely composed of gravelly sand with the exception of the asphalt-paved access road. There was no evidence of gross contamination (staining) in Area 8.

9. Area 9 consists of 1.4 acres and is located immediately to the north of Area 8. The surface is composed entirely of gravelly sand. There was no evidence of gross contamination (staining) in Area 9.
7. **CONCLUSIONS**

URS conducted a Phase I ESA of the Reliant Etiwanda Expansion project site at Rancho Cucamonga, California.

This Phase I ESA of the subject Property was performed in conformance with the scope and limitations of ASTM Practice E 1527. Any exceptions to, or deletions from, this practice are described in Section 8 of this report. This ESA was accomplished by, and limited to, a site reconnaissance and review of readily available pertinent documentation regarding past and current land use for indications of the manufacture, generation, use, storage, and/or disposal of hazardous substances at the subject Property. The investigation included a preliminary assessment of the potential for hazardous substance contamination from past and present activities at the subject Property, based on available data and information obtained from regulatory agency files.

URS identified the following environmental issues, including RECs and areas of concern (AOCs):

- The four retention basins (2 general use, 1 boiler cleaning, and 1 RO basin) are all considered RECs because of their un-permitted use as hazardous waste storage units. However, since SCE is currently stipulated by the courts to conduct closure and corrective action under DTSC oversight, no additional work is required.

- The former coke gas and distillate fuel pipelines are considered RECs because of the possibility of a release from either line to the subsurface. There are no records to indicate that either line was tested for integrity and no way of determining if all the coke fuel and distillate products reached their respective end use locations or if some may fuel/gas may have leaked from either pipeline.

- six areas (surface water discharge, pipelines, cooling tower, sulfuric acid storage tanks, former water softener and brine pit, and second solid waste disposal area) were identified by the Phase II site assessment conducted by G&M (1997) as having arsenic concentrations in soil that exceeded the screening criteria. These areas are considered RECs; if Reliant has documentation that the arsenic concentrations have been addressed through additional assessment and/or remediation, the designation of the area as a REC could be rescinded.

- The former 550-gallon UST is considered an AOC since documentation regarding closure of the UST was not provided by Reliant and was not in any agency file reviewed by URS.
7.0 Conclusions

- The site area for the combined cycle unit and all possible construction laydown areas are considered AOCs.

- The powerblocks and sumps for Units 1 and 2 and Units 3 and 4 are considered AOCs because of the presence of lube oil reservoirs, new oil/solvent drum storage, chemical storage, etc. The powerblocks have a base that is made up of approximately 18 inches of concrete. Drains located in the powerblocks direct oily water to an oil-water sump that in turn directs water via an underground pipeline to the general use retention basins. Both the pipelines and the basins are under investigation by SCE. URS does not believe additional assessment is required for the powerblocks. Sumps outside the powerblocks were inspected by URS during this ESA. There was no evidence of a release or staining. Based on the results of the prior work by G&M (1997) and on the current ESA, further assessment of the sumps is not recommended at this time.

- The transformers at the subject Property are considered AOCs. According to Mr. Lacroix, some of the transformers contain PCBs. According to the G&M 1997 report, PCB concentrations in the transformers are below action levels. Based on the data from the G&M report and the lack of obvious leaks or releases, URS does not believe additional work is required regarding the transformers.

- ASTs (gasoline, sulfuric acid, ammonia, sodium hypochloride, hydrazine, liquid nitrogen) at the Etiwanda Generating facility are considered AOCs. All ASTs, however, are protected by secondary containment that is sufficient to contain a release from the ASTs. The exceptions are the hydrogen tank bank and the liquid nitrogen tank. Release from these tanks would not spread far and is not considered to require additional investigation at this time.

- The former cooling towers in the proposed SGGS site are considered AOCs because of the presence of treated wood that contains arsenic. Analytical results of soil sampling indicate that although elevated arsenic is present in soil in the immediate area of the former cooling towers for Units 1 and 2, arsenic has not spread far beyond the immediate area of the cooling towers. When the cooling towers are demolished, the arsenic-treated wood will have to be handled and disposed of according to applicable local, state, and federal regulations. An investigation beneath the former cooling towers will be required as part of the Resource Conservation and Recovery Act (RCRA) closure requirements for the facility, discussed in more detail below.
Soil sampling programs/workplans should be developed for the location of the proposed Etiwanda Expansion Combined Cycle Plant and the final laydown area location(s). These “baselining” investigations would provide information previous regarding use of the areas by SCE and other prior landowners/tenants, especially on the offsite laydown areas.
8. LIMITATIONS

URS has performed our services for this project in accordance with the ASTM Practice E 1527 for ESA investigations: no guarantees are either expressed or implied. The scope of this investigation was limited to visual observations of the subject Property.

The records search was limited to information that was reasonably ascertainable from public sources in the time provided to prepare this report; this information is changing continually and is frequently incomplete. Unless we have knowledge to the contrary, information obtained from interviews or provided to us by EDR has been assumed to be correct and complete. We do not assume any liability for misrepresentation of information or for items not visible, accessible, or present on the subject Property at the time of the subject Property visit.

URS provided services in a reasonable and prudent manner in accordance with the customary standards of care and diligence practiced by firms that conduct services of a similar nature. As with any review, this review will be a “snapshot” of the operations during a limited period of time. Not all possible operating scenarios may be observed during the limited time frame the project team is onsite. Information obtained from sources will be assumed to be correct and complete. URS will not assume any liability for findings or lack of findings based on misrepresentation of information presented to the audit team, or for items not identifiable, made available, or accessible at the subject Property at the time of the subject Property visit.

No investigation is thorough enough to preclude the presence of materials on the subject Property that currently, or in the future, may be considered hazardous. Because regulatory evaluation criteria are changing constantly, concentrations of contaminants present and considered to be acceptable may, in the future, become subject to different regulatory standards and require remediation.

Opinions and judgments expressed herein, which are based on our understanding and interpretation of current regulatory standards, should not be construed as legal opinions. Unless subject Property conditions change, this document and the information contained herein are valid for a period of 180 days, according to the ASTM practice, and have been prepared solely for the use of GE Energy. No other third party shall have the right to rely on URS opinions rendered in connection with the services or in this document without URS’ written consent and the third party’s agreement to be bound to the same conditions and limitations as the client.

FIGURE 3
APPENDIX A
QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS
Michael H. Bowery, PG
Project Manager

Overview
Mr. Bowery has over 21 years of experience and is currently a Senior Project Manager with the Environmental Geosciences Group for the Inland Empire, responsible for development, organization, technical performance, and management of environmental site investigation and remediation programs. Mr. Bowery has managed national, regional, and statewide environmental programs and projects for clients including the Kerr Group, Inc., The Gas Company, BNSF Railroad, and Berry Plastics, Inc. Mr. Bowery specializes in client regulatory liaison (RWQCB, OCHCA, ACHCS, SBC Fire, VCEHD, and the SJCEHD), development and implementation of remediation compliance approaches, and coordination of multi site environmental/hazardous material due diligence/investigation programs.

Phase I and II, Soil and Groundwater Site Assessment and Remediation, Thrifty Oil Co., Southern, Central, and Northern California, Senior Project Manager 2003 to 2006. Responsible for management of over 35 projects involving site assessment of hydrocarbon-impacted soil and groundwater. Supervised and directed pilot studies; developed site specific remedial approach for cleanup of hydrocarbon affected soil and free phase / dissolved phase hydrocarbons in groundwater. Managed and directed installation of soil vapor extraction, groundwater pump and treat, multi-phase extraction, dual phase extraction, and air sparge remedial systems. Directed operations and maintenance of remedial systems and groundwater monitoring programs. Responsible for agency interaction, development of site specific cleanup goals and obtained no further action. Completed multiple Phase I ESAs in Southern California for commercial and industrial properties.

Phase I and II ESAs, Various Projects, Cornerstone Environmental Associates, Central and Southern CA. Project Manager 1996 to 2003 to complete over 300 projects Phase I due diligence assessments and Phase II investigations on property being considered for real estate loans in Southern California. These assessments were performed on various land use types that included railroads, and commercial and industrial properties. Evaluated risk level to lending institution and provided recommendations to mitigate any recognized environmental conditions.

Phase I and II ESA, Cornerstone Environmental Associates/Geraghty & Miller, Inc., Southern, CA. Project Manager responsible for the completion of a Phase I ESA for the redevelopment of a 16-acre parcel formerly used for glass manufacturing operations. Completion of the Phase I ESA involved determining areas of concern (AOC) and appropriate actions to address each AOC. The field assessment included oversight of demolition activities, boring and well installation activities, and installation of total fluids groundwater pump and treat system located inside of new 296,000-square-foot building.

Areas of Expertise
- Geology/Hydrogeology
- Program/Project Management
- Environmental Assessment and Site Investigations
- Soil and Groundwater Remediation

Years of Experience
- With URS: 1 Year
- With Other Firms: 21 Years

Education
- BS/Earth Science/1975/Cal State College, Bakersfield
- MS/Geology/1984/Cal State University, Los Angeles

Registration/Certification
- Professional Geologist/California/5027
- Certified Professional Geologist/American Institute of Professional Geologists/7029
Responsible for regulatory agency interaction to determine site-specific cleanup goals that resulted in no further action being granted from agency.

Site Characterization/Development and Implementation of Remedial Strategy, Cornerstone Environmental Associates, Kramer Junction, CA. Project Manager for preparation of Phase I and II environmental assessment related to a train derailment that resulted in herbicides and fungicides impacting railroad property. Developed innovative remedial approach that was acceptable to lead regulatory agency. Completed remedial approach that resulted in no further action being granted from agency.

Site Characterization, Leaking Subsurface Pipeline Project, Barstow, CA, Geraghty & Miller, Inc. Project Manager for the assessment of areal and vertical extent of fuel leak from a subsurface pipeline that delivered diesel fuel to locomotive fueling facility. Responsible for completing soil borings in bedrock environment located in an active rail yard. Employed geophysical and geologic approaches to determine direction of diesel fuel leak in fractured bedrock and installed groundwater wells in nearby dry Mojave River bed that resulted in delineation of free phase diesel plume. Critical project elements included negotiations with regulatory agencies, including the Regional Water Quality Control Board and interacting with the client and regulators.

Erik Skov, P.G.
Project Manager

Overview
Mr. Skov has more than 18 years of experience providing hazardous waste management services, including subsurface investigations involving extensive soil and groundwater sampling, monitoring well design and installation, aquifer testing, data interpretation, reporting, and remedial action plan preparation and implementation. He also manages engineering geology studies, including siting investigations for hospitals, municipal landfills, and natural gas pipelines; and provides data input for slope stability investigations.

Project-Specific Experience
Project Manager and Field Coordinator, Stanford Linear Accelerator (SLAC), Stanford, California, Stanford Land Management Company: Managed and participated in the data review and collection of information relating to radiological and non-radiological contamination present at the SLAC facility in Palo Alto, California. The objective of the work was to conduct a detailed review of available data, combined with our experience on similar projects, to develop a detailed order of magnitude cost estimates for the dismantling and demolition of the SLAC facility after facility closure. The cost estimates included providing costs for a reconnaissance level survey, a characterization level survey, and dismantling and demolition costs given a number of different scenarios from the results of the characterization level survey.

Task Leader, Colusa Power Plant Project AFC and Permitting, Colusa County, California, Mirant Corporation: Managed the data collection and presentation for the Waste Handling section of an AFC for a 500 MW gas-fired combined-cycle generation facility in Colusa County, California. Responsibilities included identifying and quantifying potential waste streams associated with the construction and operation of the power plant, determining the applicable Laws, Ordnances, Regulations, and Standards (LORS) governing waste generated at the facility, and evaluating the potential impacts and mitigation measures to be implemented during construction and management activities.

Technical Support, Potrero Power Plant AFCs and Permitting, San Francisco, California, Mirant Corporation: Provided technical support in the areas of waste management, hazardous materials generation and handling, site investigation, and compliance with local regulatory standards for a 540 MW natural-gas-fired combined-cycle plant located in San Francisco.

Task Leader, Proposed Bridgeview Power Plant Project AFC and Permitting, Contra Costa County, California, TransCanada: Managed the data collection and presentation for the Waste Handling section of an AFC for a combined-cycle generation facility in Contra Costa County, California. Responsibilities included identifying and
Erik Skov

quantifying potential waste streams associated with the construction and operation of the power plant, determining the applicable Laws, Ordinances, Regulations, and Standards (LORS) governing waste generated at the facility, and evaluating the potential impacts and mitigation measures to be implemented during construction and management activities.

Project Manager, Facility Closures, Union City and Fremont, California, Crown Cork & Seal Company: Managed work for closure of two facilities — a two-piece beverage can manufacturing (wet operation) facility, and a sanitary food can (dry operation) facility. The wet operation used atomized petroleum and synthetic hydrocarbons for cooling and lubrication. Work included preparation of a Facility Closure Plan, including compilation of an operation history of the facility; decontamination of the building interior, decontamination and removal of excess equipment, and reuse or disposal of all hazardous materials and hazardous wastes at the site. Prepared a Post-Closure Report.

A Facility Closure Plan was also prepared for the dry operation, which was similar to the other facility, but also included abatement of asbestos from drying ovens. Prepared a Post Closure Report for the removal of the ovens, equipment, and hazardous waste and materials. The data from the facility closure investigation was used to conduct an impact assessment and prepare a RAP.

Analyst, Superfund Sites Remedial Investigations, California, California EPA Department of Toxic Substances Control: Conducted remedial investigations for several Superfund sites in California. Work included extensive soil and groundwater sampling, monitoring well installation, aquifer testing, data reduction and interpretation, and report preparation.

Project Manager/Task Leader, Richmond Parkway Project, Richmond, California, Bechtel: Responsible for technical work to address environmental issues along the Parkway alignment. Developed the scope for environmental sampling, generated schedules and budgets, tracked monthly project costs, managed project staff and equipment, reviewed and interpreted data, prepared reports, and interacted with regulatory agencies.

Project Manager/Technical Lead, Site Characterization, Site Characterization, ICI Paints: Managed site characterization of a former paint manufacturing facility. Prepared an investigation work plan for regulatory agency approval, formulated a remedial strategy, and developed site mitigation plan. Subsequent to approval of the site mitigation plan, developed a detailed design for construction of a clean fill cap and issued bid package to potential construction contractors.

Project Manager, Automobile Manufacturing Plant Site Remediation, Sydney, Australia, Ford Motor Company: Responsible for oversight of field excavation and remediation activities on site in Australia containing soils contaminated with hydrocarbons. Performed QA/QC of excavation, soil remediation, validation sampling, and
Erik Skov

laboratory results. Reviewed and interpreted data. Monitored project costs. Interfaced with regulatory agencies in New South Wales.

Project Manager/Technical Lead, Pharmaceutical Manufacturing Plant Remedial Action Plan, Sydney, Australia, International Division of Merck: Project involved the excavation and bioremediation of 10,000 m³ of soil contaminated with dichlorobenzenes at a manufacturing plant in Sydney, Australia. Oversaw field activities, QA/QC of field validation sampling and laboratory analytical results, managed and updated budgets and schedules, monthly cost tracking, data review and interpretation, client contact, and interaction with New South Wales Environment Protection Authority and local Council.

Team Member and Technical Lead, EIS, Sydney, Australia, U.S./Australian Energy Consortium: A project team preparing an Environmental Impact Statement (EIS) for the construction of a gas-fired cogeneration plant on a hazardous waste site in Botany, New South Wales. Responsible for the evaluation and preparation of the geology, hydrogeology, and environmental construction management and mitigation section of the EIS. Issues included the impact of the power plant construction on the distribution of subsurface contamination and the mitigation measures to be implemented to address the impacts. Subsequent to the submission of the EIS, presented with a panel of other experts at a Commission of Inquiry called by the Minister for Urban Development, in support of the Development Application for the construction of the cogeneration plant.

Project Manager, Site Remediation Monitoring, Santa Rosa, California, Optical Coating Laboratory Incorporated: Ongoing remediation and quarterly monitoring. OCLI manufactured thin film coatings for glass surfaces for the high tech industry. The process used chlorinated solvents in the cleaning process prior to the application of the thin film. Waste solvent was released from the site and contaminated several groundwater bearing units beneath the site. Interim remedial measures, including the design and installation of a groundwater extraction system and stacked column air stripper were undertaken. Routine liaison and reporting to the North Coast Regional Water Quality Control Board was required throughout the project.

Project Manager, Greyhound Bus Depot Investigation, Santa Rosa, California, Greyhound: Project Manager and lead investigator for an alleged release of diesel fuel and gasoline from the former Greyhound Bus Depot in downtown Santa Rosa. The project involved close interaction with the North Coast Regional Water Quality Control Board as it involved multiple release sites in close proximity to one another that were impacting the storm drain along B Street.

Field Technical Coordinator, Site Investigation, Palo Alto, California, Hewlett-Packard: Tasks included coordinating field activities for five concurrent source-specific investigations. Work included extensive cone penetration testing, in situ groundwater sampling, soil vapor survey, soil sampling, groundwater sampling, geophysical
Erik Skov

logging, monitoring well installation, and aquifer testing. Contributing author of Remedial Investigation Report.

**Project Manager, Site Investigation, Palo Alto, Hewlett-Packard:** Managed a source-specific investigation as part of a large RI/FS. Responsibilities included design and implementation of field investigation activities, quarterly budget and schedule generation, monthly cost tracking, personnel and equipment management, stratigraphic and chemical data review and interpretation. Contributing author of Remedial Investigation Report.

**Task Manager, Sediment Sampling Program, Tosco Avon Refinery, Martinez, California, Joint Environmental Investigation and Remediation Committee:** Sediment sampling program to support the Human Health and Ecological Risk Assessment (HHERA). Tasks included interfacing with the ecological risk assessor to identify sampling locations at appropriate areas based on initial environmental data, planning sampling activities and coordinating with the JEIRC Project Manager and refinery Area Operators to obtain entrance and work permits for certain areas of the refinery, and supervising and participating in the sampling effort under the oversight of the U.S. EPA.

**U.S. Technical Lead** working with URS Paris office to conduct a site characterization at a former U.S. company owned agricultural chemical plant located in Port de Bouc, France. Responsibilities included interfacing with a multidisciplinary project team to develop a scope of work to address the requirements of newly promulgated French regulations. Also responsible for developing the Quality Assurance Project Plan (QAPP) for the initial phase of the project.

**Technical Lead, Port Costa Refinery, Port Costa, California, ChevronTexaco:** Compiling data and reviewing existing data at this abandoned facility to evaluate current site conditions and plan additional characterization work to develop an exit strategy. The former Port Costa oil storage and shipping terminal included aboveground storage tanks, a wharf, a railcar loading rack and a drainage pond. Petroleum hydrocarbons were observed issuing into the Carquinez Strait from a stormwater culvert, prompting the U.S. EPA to issue a Unilateral Order.

**Project Manager, Golden Eagle Refinery, Groundwater Investigation, Martinez, California, Phillips Petroleum:** Responsible for additional groundwater characterization activities associated with a major release of pure MTBE from an underground pipeline at the refinery, as well as the O&M of the groundwater extraction and treatment system associated with the release cleanup.

**Task Manager and Lead Geologist, Pascagoula, Mississippi, Chevron Pascagoula Refinery:** Update of the geologic site model for inclusion in the RFI for the refinery. Data from all previous site investigations and current RFI investigations were combined to develop the updated geologic site model.
Project Manager, General Environmental Services Contract, Bay Area, California, BART: Responsible for various aspects of work under the general contract. Reviewed documents, prepared Work Directive Proposals, and managed soil and groundwater investigations of properties along and adjacent to BART’s expansion lines.

Project Manager, Sydney Harbor Casino Environmental Surveillance Project, Sydney, Australia, Leighton Construction Management: Managed environmental surveillance of a former coal-fired power station. Coordinated onsite environmental surveillance and monitoring activities. Developed recommendations for waste handling and disposal to minimize potential impacts on the project schedule. Prepared reports detailing results of monitoring and surveillance activities. Participated in monthly environmental management meetings with contractors and regulatory agencies.

Senior Geologist, George’s River Pipeline Project, Sydney, Australia, Australian Gas and Light Company: Conducted a geologic investigation for the siting and installation of a natural gas pipeline beneath the George’s River in Sydney, New South Wales. The study was conducted to determine if any of the structural features present in the rock formation would inhibit the use of directional drilling techniques.

Project Manager and Technical Lead, New South Wales, Australia, North Power: Site investigations and continued groundwater monitoring and investigations for two former coal fired power stations located in northern New South Wales.

Project Manager for a soil and groundwater investigation to characterize contamination associated with a major copper smelting operation in Port Kembla, NSW. Responsible for development of the technical approach and implementation of the subsurface investigation to delineate the extent of a copper sulphate plume in groundwater beneath the site.

Audit Team Member New South Wales, Australia: Conducted due diligence audits for the coal and coke industry. Participated in audits for three coal mines and two cokeries. Responsible for evaluating and identifying soil and groundwater contamination issues related to the operation of the facilities and the associated potential liabilities associated with acquisition or divestment of the operations.

Project Manager for site remediation of hydrocarbon-contaminated soil at a former automobile manufacturing plant in Sydney. Responsible for oversight of field excavation and remediation activities, QA/QC of excavation and soil remediation validation sampling and laboratory results, data review and interpretation, cost tracking, and client contact and interaction with New South Wales regulatory agencies.

Field Task Manager for conducting a Remedial Investigation for metals contamination at a conduit-plating facility in Pittsburgh, California. Work included extensive soils and surface water sampling, field coordination of
biota investigation and air sampling, data analysis and interpretation, and report preparation.

**Field Manager** for the Implementation of a Remedial Action Plan for mitigating an extensive subsurface release of diesel fuel at a lumber remanufacturing facility in Stockton, California. Tasks included excavation oversight, perimeter safety monitoring, bioremediation cell construction and pre-screening of excavated soil using Thin Layer Chromatography techniques to determine diesel fuel concentrations.

**Geology and Engineering Geology**
Assisted in the geologic investigation of a proposed hospital site in Northern California. Work included test pit logging and subsurface interpretation.

Assisted in fault study for a proposed landfill site in Northern California. Work included trench siting and logging.

Assisted in slope stability investigation on a large fill area for a resort on the island of Guam. Work included the installation of slope inclinometers, standpipes and pneumatic piezometers under adverse working conditions.

Conducted design review of engineering recommendations for residences damaged or destroyed by the October 1989 Loma Prieta Earthquake. This FEMA funded oversight program was administered by the Santa Cruz County Earthquake Recovery Division.

STATE AND LOCAL RECORDS
HIST Cal-Sites Historical Calsites Database
SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

**CERCLIS-NFRAP:** Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/10/2006 has revealed that there are 2 CERC-NFRAP sites within approximately 1 mile of the target property.

RCRAInfo: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/13/2006 has revealed that there is 1 RCRA-TSDF site within approximately 1 mile of the target property.

**EXECUTIVE SUMMARY**

**FTTS:** FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act) over the previous five years. To maintain currency, EDR contacts the Agency on a quarterly basis.

A review of the FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there is 1 FTTS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

STATE AND LOCAL RECORDS

TOXIC PITS: The Toxic Pits Cleanup Act Sites database identifies sites suspected of containing hazardous substances where cleanup has not yet been completed. The data come from the State Water Resources Control Board.

A review of the Toxic Pits list, as provided by EDR, and dated 07/01/1995 has revealed that there is 1 Toxic Pits site within approximately 1.5 miles of the target property.

### SWEEPS

Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1980’s. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 4 SWEEPS UST sites within approximately 0.75 miles of the target property.

**HAZNET:** The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2003 has revealed that there are 22 HAZNET sites within approximately 0.5 miles of the target property.

**Emissions Inventory Data:** Toxics and criteria pollutant emissions data collected by the ARB and local air pollution agencies.

A review of the EMI list, as provided by EDR, and dated 12/31/2004 has revealed that there are 7 EMI sites within approximately 0.5 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control’s (DTSC’s) Site Mitigation and Brownfields Reuse Program’s (SMBRP’s) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/29/2006 has revealed that there are 7 ENVIROSTOR sites within approximately 1.5 miles of the target property.
Due to poor or inadequate address information, the following sites were not mapped:

**POTW:** Not reported  
**Treat To Water:** Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
**Complexity:** Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

CAMDBS (Clean Air Markets Division Business System) is a national information system that supports the implementation of market-based air pollution control programs administered by the Clean Air Markets Division, within the Office of Air and Radiation. These programs include the Acid Rain Program, established by Title IV of the Clean Air Act Amendments of 1990, and regional programs designed to reduce the transport of ozone. These emissions trading programs allows regulated facilities (primarily electric utilities) to adopt the most cost-effective strategies to reduce emissions at their units. Units that reduce their emissions below the number of allowances they hold -- each allowance is equivalent to one ton of sulfur dioxide or nitrogen oxides -- may trade allowances with other units in their system, sell them to other utilities on the open market or through EPA auctions, or bank them to cover emissions in future years. CAMDBS functions include registering responsible officials, establishing allowance accounts, reporting hourly emissions data, and transferring allowances between accounts.

FRP

California - Hazardous Waste Tracking System - Datamart

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

During a quarterly fire hydrant flush, the substance was released on to the ground and into a flood control channel. At the time of the test, no one was aware the hydrant system was connected to the cooling water system.

### WMUDS/SWAT:
- **Edit Date:** Not reported
- **Complexity:** Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxic wastes) with numerous discharge points, leak detection systems or ground water monitoring wells.
- **Primary Waste:** Process Waste (Waste produced as part of the industrial/manufacturing process)
- **Primary Waste Type:** Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.
- **Secondary Waste:** Not reported
- **Secondary Waste Type:** Not reported
- **Base Meridian:** Not reported
- **NPID:** Not reported
- **Tonnage:** 0
- **Regional Board ID:** Not reported
- **Municipal Solid Waste:** False
- **Superorder:** False
- **Open To Public:** False
- **Waste List:** False
- **Agency Type:** Private
- **Agency Name:** MOUNTAIN VISTA POWER GEN., LLC
- **Agency Department:** Not reported
- **Agency Address:** 1111 LOUISIANA, 16TH FLOOR
- **Agency City, St, Zip:** HOUSTON, TX 77002
- **Agency Contact:** F. J. MEYER
- **Agency Phone:** 7132076000
- **Land Owner Name:** Not reported
- **Land Owner Address:** Not reported
- **Land Owner City, St, Zip:** Not reported
- **Land Owner Contact:** Not reported
- **Land Owner Phone:** Not reported
- **Region:** 8
- **Facility Type:** Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
- **Facility Description:** Not reported
- **Facility Telephone:** Not reported
- **SWAT Facility Name:** Not reported
- **Primary SIC:** 4911
- **Secondary SIC:** Not reported
- **Comments:** Not reported
- **Last Facility Editors:** Not reported
- **Waste Discharge System:** True
- **Solid Waste Assessment Test Program:** False
- **Toxic Pits Cleanup Act Program:** True
- **Resource Conservation Recovery Act:** True
- **Department of Defence:** False

Description: Equipment malfunction caused release. 500 gallons went into Chadwick Channel (dry Channel) which eventually ends up at the Santa Ana River. Recovered all substance utilizing vacuum trucks. Nothing left the property.

**Site:** ALLSTATE PAPER & METAL RECYCLE

**Address:** 8889 ETIWANDA AVENUE

**City, St, Zip:** RANCHO CUCAMONGA, CA 91739

- **Facility ID:** 361016153
- **Facility Type:** Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
- **Facility Status:** Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
- **NPDES Number:** CAS0000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
- **Subregion:** 8
- **Facility Telephone:** Not reported
- **Agency Name:** ALLSTATE PAPER AND METAL RECYCLE
- **Agency Address:** 8889 ETIWANDA AVE
- **Agency City, St, Zip:** RANCHO CUCAMONGA 91739
- **Agency Contact:** CHARLIE LIN
- **Agency Telephone:** 9098993613
- **Agency Type:** Private
- **SIC Code:** 5093
- **SIC Code 2:** Not reported
- **Primary Waste:** Not reported
- **Primary Waste Type:** Not reported
- **Secondary Waste:** Not reported
- **Secondary Waste Type:** Not reported
- **Design Flow:** Not reported
- **Baseline Flow:** Not reported
- **Reclamation:** No reclamation requirements associated with this facility.
- **POTW:** The facility is not a POTW.
- **Treat To Water:** Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
- **Complexity:** Category C - Facilities having no waste treatment systems, such as cooling water

---

**Note:** The text above includes the following terms and concepts:

- **Moderate Threat to Water Quality:** A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Aesthetic impairment would include nuisance from a waste treatment facility.
- **Relative:** This term refers to the distance from the reference point, which in this case is Lower 349 ft.
- **Actual:** This term refers to the measured distance, which is 1120 ft.
- **Subregion:** A specific geographic area within a larger region.
- **Facility ID:** A unique identifier for the facility.
- **Facility Telephone:** Contact information for the facility.
- **Facility Contact:** The name and contact details of the facility's representative.
- **Agency Name:** The name of the regulatory agency responsible.
- **Agency Address:** The address of the regulatory agency.
- **Agency City, St, Zip:** The city, state, and zip code associated with the regulatory agency.
- **Agency Contact:** The contact information for the regulatory agency.
- **Agency Telephone:** The telephone number for the regulatory agency.
- **Agency Type:** The type of regulatory agency.
- **SIC Code:** Standard Industrial Classification code, which categorizes industries and businesses.
- **SIC Code 2:** A secondary SIC code.
- **Primary Waste:** The primary type of waste generated at the facility.
- **Primary Waste Type:** The specific type of waste within the primary category.
- **Secondary Waste:** A secondary type of waste generated at the facility.
- **Secondary Waste Type:** The specific type of secondary waste.
- **Design Flow:** The design flow rate of the facility.
- **Baseline Flow:** The baseline flow rate of the facility.
- **Reclamation:** The reclamation requirements associated with the facility.
- **POTW:** The facility's relationship to a POTW.
- **Treat To Water:** The level of threat to water quality.
- **Complexity:** The complexity level of the facility.
dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Site 11 of 15 in cluster B

- Facility ID: PAC COAST RECYCLING LLC
- Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
- Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
- NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
- Subregion: 8
- Facility Telephone: 9098991767
- Agency Name: PAC COAST RECYCLING LLC
- Agency Address: 482 Pier T Ave
- Agency City,St,Zip: Long Beach 908026209
- Agency Contact: SANDERS, TERRY
- Agency Telephone: 3106288100
- Agency Type: ?
- SIC Code: Not reported

- Primary Waste: Not reported
- Primary Waste Type: Not reported
- Secondary Waste: Not reported
- Secondary Waste Type: Not reported
- Design Flow: Not reported
- Baseline Flow: Not reported
- Reclamation: Not reported
- POTW: Not reported
- Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
- Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**MAP FINDINGS**

### King's Auto Wrecking (Continued)

- **Secondary Waste:** Not reported
- **Secondary Waste Type:** Not reported
- **Design Flow:** Not reported
- **Baseline Flow:** Not reported
- **Reclamation:** No reclamation requirements associated with this facility.
- **POTW:** The facility is not a POTW.
- **Treat To Water:** Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
- **Complexity:** Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

(Continued)
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

**Treat To Water:** Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

**Complexity:** Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Status: Violations exist

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System
(NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

California - Hazardous Waste Tracking System - Datamart

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

Reclamation: No reclamation requirements associated with this facility.
 POTW: The facility is not a POTW.
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump
### AMERON INT'L CONCRETE & STEEL PIPE GRP (Continued)

| Facility ID: | Santa Ana River 361007020 |
| Facility Type: | Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping. |
| Facility Status: | Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements. |
| NPDES Number: | CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board |
| Subregion: | 8 |

California - Hazardous Waste Tracking System - Datamart

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

California - Hazardous Waste Tracking System - Datamart

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Other Pertinent Environmental Activity Identified at Site
California - Hazardous Waste Tracking System - Datamart
The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo Corrective Action Summary:

Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.
Event Date: 06/16/2005

Event: Current Human Exposures under Control, More information is needed to make a determination.
Event Date: 08/11/2000

Event: Migration of Contaminated Groundwater under Control, More information is needed to make a determination.
Event Date: 08/11/2000
Event: Igration of Contaminated Groundwater under Control, More information is needed to make a determination.
Event Date: 06/02/1998

Event: Current Human Exposures under Control, More information is needed to make a determination.
Event Date: 06/02/1998

Event: Certification Of Remedy Completion Or Construction Completion
Event Date: 10/23/1995

Event: CMI Workplan Approved
Event Date: 09/26/1995

Event: Corrective Measures Design Approved
Event Date: 09/16/1995

Event: Date For Remedy Selection (CM Imposed)
Event Date: 05/01/1995

Event: CMS Approved
Event Date: 02/21/1995

Event: CMS Workplan Approved
Event Date: 10/01/1994

Event: Date For Remedy Selection (CM Imposed)
Event Date: 12/28/1993

Event: Stabilization Measures Evaluation, This facility is not amenable to stabilization activity at the present time for reasons other than 1) it appears to be technically infeasible or inappropriate (NF) or 2) there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.
Event Date: 01/21/1993

Event: CA Prioritization, Facility or area was assigned a high corrective action priority.
Event Date: 01/07/1993

Event: CMS Approved
Event Date: 12/03/1992

Event: RFI Approved
Event Date: 02/28/1991

Event: CMS Workplan Approved
Event Date: 11/30/1990

Event: RFI Workplan Approved
Event Date: 05/31/1990

Event: CA Prioritization, Facility or area was assigned a high corrective action priority.
Event Date: 11/01/1989

There are 8 violation record(s) reported at this site:

- **Final Monetary Penalty**: 1/3/1995, 100000, STATE

**RCRAInfo** is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

EPA Waste Codes Addendum

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>D001</td>
<td>IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.</td>
</tr>
<tr>
<td>D002</td>
<td>A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.</td>

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### FEDERAL RECORDS

**NPL:** National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA’s Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

| Date of Government Version: 09/27/2006 | Source: EPA |
| Date Data Arrived at EDR: 11/01/2006 | Telephone: N/A |
| Date Made Active in Reports: 11/22/2006 | Last EDR Contact: 11/01/2006 |
| Number of Days to Update: 21 | Next Scheduled EDR Contact: 01/29/2007 |
| | Data Release Frequency: Quarterly |

#### DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

NPL RECOVERY: Federal Superfund Liens

Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 08/09/2006
Date Data Arrived at EDR: 09/21/2006

Last EDR Contact: 12/19/2006
Next Scheduled EDR Contact: 03/19/2007
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RCRA: Resource Conservation and Recovery Act Information
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments—EPA’s Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities—especially those without EPA Brownfields Assessment Demonstration Pilots—minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA’s Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients—States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

**SSTS:** Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

- **Data Release Frequency:** Annually

**MLTS:** Material Licensing Tracking System

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

- **Date of Government Version:** 10/19/2006
- **Source:** Nuclear Regulatory Commission
- **Telephone:** 301-415-7169
- **Last EDR Contact:** 10/02/2006
- **Next Scheduled EDR Contact:** 01/01/2007
- **Data Release Frequency:** Quarterly

**MINES:** Mines Master Index File

Contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

- **Date of Government Version:** 08/09/2006
- **Source:** Department of Labor, Mine Safety and Health Administration
- **Telephone:** 303-231-5959
- **Last EDR Contact:** 12/28/2006
- **Next Scheduled EDR Contact:** 03/26/2007
- **Data Release Frequency:** Semi-Annually

**FINDS:** Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and ‘pointers’ to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).
RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

BRS: Biennial Reporting System
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

STATE AND LOCAL RECORDS

HIST CAL-SITES: Calsites Database
The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

CA BOND EXP. PLAN: Bond Expenditure Plan
Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

SCH: School Property Evaluation Program
This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.
TOXIC PITS: Toxic Pits Cleanup Act Sites
Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

Date of Government Version: 07/01/1995  Source: State Water Resources Control Board
Date Data Arrived at EDR: 08/30/1995  Telephone: 916-227-4364

- Last EDR Contact: 11/20/2006
- Next Scheduled EDR Contact: 02/19/2007
- Data Release Frequency: Varies
NOTIFY 65: Proposition 65 Records

Proposition 65 Notification Records. NOTIFY 65 contains facility notifications about any release which could impact drinking water and thereby expose the public to a potential health risk.

- Date of Government Version: 10/21/1993
- Source: State Water Resources Control Board
- Date Data Arrived at EDR: 11/01/1993
- Telephone: 916-445-3846
- Date Made Active in Reports: 11/19/1993
- Last EDR Contact: 10/16/2006
- Number of Days to Update: 18
- Next Scheduled EDR Contact: 01/15/2007
- Data Release Frequency: No Update Planned

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program’s oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder’s office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

- Date of Government Version: 10/04/2006
- Source: Department of Toxic Substances Control
- Date Data Arrived at EDR: 10/05/2006
- Telephone: 916-323-3400
- Date Made Active in Reports: 10/25/2006
- Last EDR Contact: 10/05/2006
- Number of Days to Update: 20
- Next Scheduled EDR Contact: 01/01/2007
- Data Release Frequency: Semi-Annually

VCP: Voluntary Cleanup Program Properties

Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC’s costs.

- Date of Government Version: 08/29/2006
- Source: Department of Toxic Substances Control
- Date Data Arrived at EDR: 08/30/2006
- Telephone: 916-323-3400
- Date Made Active in Reports: 10/05/2006
- Last EDR Contact: 11/29/2006
- Number of Days to Update: 36
- Next Scheduled EDR Contact: 02/26/2007
- Data Release Frequency: Quarterly

DRYCLEANERS: Cleaner Facilities

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaner’s agents; linen supply; coin-operated laundries and cleaning; drycleaning plants, except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

- Date of Government Version: 04/18/2005
- Source: Department of Toxic Substance Control
- Date Data Arrived at EDR: 04/18/2005
- Telephone: 916-327-4498

### HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

### ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control’s (DTSC’s) Site Mitigation and Brownfields Reuse Program’s (SMBRP’s) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

INDIAN UST R1: Underground Storage Tanks on Indian Land
A listing of underground storage tank locations on Indian Land.
INDIAN UST R6: Underground Storage Tanks on Indian Land

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR’s researchers. Manufactured gas sites were used in the United States from the 1800’s to 1950’s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

COUNTY RECORDS

ALAMEDA COUNTY:

Contaminated Sites
A listing of contaminated sites overseen by the Toxic Release Program (oil and groundwater contamination from chemical releases and spills) and the Leaking Underground Storage Tank Program (soil and groundwater contamination from leaking petroleum USTs).

Underground Tanks
List includes sites from the underground tank, hazardous waste generator and business plan/2185 programs.
FRESNO COUNTY:

CUPA Resources List
Certified Unified Program Agency. CUPA’s are responsible for implementing a unified hazardous materials and hazardous waste management regulatory program. The agency provides oversight of businesses that deal with hazardous materials, operate underground storage tanks or aboveground storage tanks.

KERN COUNTY:

Underground Storage Tank Sites & Tank Listing
Kern County Sites and Tanks Listing.

LOS ANGELES COUNTY:

San Gabriel Valley Areas of Concern
San Gabriel Valley areas where VOC contamination is at or above the MCL as designated by region 9 EPA office.

HMS: Street Number List
Industrial Waste and Underground Storage Tank Sites.

List of Solid Waste Facilities
City of Los Angeles Landfills

Date of Government Version: 03/01/2006

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
- Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association’s annual survey of hospitals.

Medical Centers: Provider of Services Listing

UTM X (Meters): 451577.8
UTM Y (Meters): 3772319.8
Elevation: 1125 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 34117-A5 GUASTI, CA
Most Recent Revision: 1981

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.
GROUNDWATER FLOW DIRECTION INFORMATION
Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY
General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.
HYDROLOGIC INFORMATION
Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE
Target Property County: SAN BERNARDINO, CA  
FEMA Flood Electronic Data: YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06071C8634F
Additional Panels in search area: 06071C8635F 06071C8633F

NATIONAL WETLAND INVENTORY
NWI Quad at Target Property: GUASTI  
Data Coverage: YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION
Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

*Site-Specific Hydrogeological Data*:
Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®
Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.
GROUNDWATER FLOW VELOCITY INFORMATION
Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY
Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture’s (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

---

**Soil Map ID: 1**

**Soil Component Name:** WATER

**Soil Surface Texture:** Not reported

**Hydrologic Group:** Not reported

**Soil Drainage Class:** Not reported

**Hydric Status:** Soil does not meet the requirements for a hydric soil.

**Corrosion Potential - Uncoated Steel:** Not Reported

**Depth to Bedrock Min:** > 0 inches

**Depth to Bedrock Max:** > 0 inches

**No Layer Information available.**

---

**Soil Map ID: 2**

**Soil Component Name:** HANFORD

**Soil Surface Texture:** sandy loam

**Hydrologic Group:** Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

**Soil Drainage Class:** Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

**Hydric Status:** Soil does not meet the requirements for a hydric soil.

**Corrosion Potential - Uncoated Steel:** MODERATE

**Depth to Bedrock Min:** > 0 inches

**Depth to Bedrock Max:** > 0 inches
### Soil Layer Information

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW® Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture’s (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.
PHYSICAL SETTING SOURCE RECORDS SEARCHED

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

California Drinking Water Quality Database
Source: Department of Health Services
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California’s Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Environmental Data Resources, Inc.
Aerial Photography Print Service

Environmental Data Resources, Inc.'s (EDR) Aerial Photography Print Service is a screening tool designed to assist professionals in evaluating potential liability on a target property resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of reasonably ascertainable standard historical sources. Reasonably ascertainable means information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.

To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following standard historical sources may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-00 requires "All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful." (ASTM E 1527-00, Section 7.3.2, page 12.)

Aerial Photographs

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Aerial photographs are a valuable historical resource for documenting past land use and can be particularly helpful when other historical sources (such as city directories or fire insurance maps) are not reasonably ascertainable. The EDR Aerial Photograph Print Service includes a search of local aerial photograph collections flown by public and private agencies. EDR’s professional field-based researchers provide digitally reproduced historical aerial photographs at ten year intervals.

Please call Environmental Data Resources, Inc. Nationwide Customer Service at 1-800-352-0050 (8am-8pm ET) with questions or comments about your report.

Thank you for your business!

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.'s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property, and its surrounding area, resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of reasonably ascertainable standard historical sources. Reasonably ascertainable is defined as information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable. To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following standard historical sources may be used: aerial photographs, city directories, fire insurance maps, topographic maps, property tax files, land title records (although these cannot be the sole historical source consulted), building department records, or zoning/and use records. ASTM E 1527-00 requires "All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful." (ASTM E 1527-00, Section 7.3.2 page 12.)

EDR's Historical Topographic Map Report includes a search of available public and private color historical topographic map collections.

Topographic Maps
A topographic map (topo) is a color coded line-and-symbol representation of natural and selected artificial features plotted to a scale. Topos show the shape, elevation, and development of the terrain in precise detail by using contour lines and color coded symbols. Many features are shown by lines that may be straight, curved, solid, dashed, dotted, or in any combination. The colors of the lines usually indicate similar classes of information. For example, topographic contours (brown); lakes, streams, irrigation ditches, etc. (blue); land grids and important roads (red); secondary roads and trails, railroads, boundaries, etc. (black); and features that have been updated using aerial photography, but not field verified, such as disturbed land areas (e.g., gravel pits) and newly developed water bodies (purple).

For more than a century, the USGS has been creating and revising topographic maps for the entire country at a variety of scales. There are about 60,000 U.S. Geological Survey (USGS) produced topo maps covering the United States. Each map covers a specific quadrangle (quad) defined as a four-sided area bounded by latitude and longitude. Historical topographic maps are a valuable historical resource for documenting the prior use of a property and its surrounding area, and due to their frequent availability can be particularly helpful when other standard historical sources (such as city directories, fire insurance maps, or aerial photographs) are not reasonably ascertainable.
